Subject: RE: Area 40 vapor monitoring

Hi Chris,

I will defer to our vapor "expert" Dan Gallagher as this is his bailiwick. I will forward this request and let Dan weigh in on this matter.

-Pete

Subject: Area 40 vapor monitoring

Hi Peter – As you know, AR has been conducting quarterly monitoring of existing vapor monitoring wells at Area 40 at the request of DTSC. We collected a dry season in September and a fall/winter season in December. Knowing that we have bounds on the worst cases and we have selected a remedy that addresses the vapor, what information will the Spring data provide? I think the appropriate approach is to hold off on any additional sampling until the remedy is implemented and then begin quarterly sampling again. We will compare post remedy concentrations to the data we already have to evaluate effectiveness. What are your thoughts? Chris
