My comments attached. Thanks!

I don't have a specific response to David's comment below at this time, but I did have a similar reading to some of the text on RPFs implying non-cancer risk prediction - this is worth discussing.

Subject: Comments on draft Additivity Paper

I think the authors did an excellent job of revising the paper and responding to concerns raised by the reviewers. My compliments! I also think it reads very clearly, although I do have some suggestions in the attached for clarification. None would require significant restructuring, but rather some minor changes in wording. Thus, while I would like to see the comments I made considered and addressed, I would think that could be done with slight revisions and fairly quickly if the authors agreed with the comments.
