---

Ed and Cliff:

I'd like to visit with you both about the context associated with these photos based upon Cliff's onsite observations.

These photos were sent when I was out of the office. I returned about an hour ago and expect to be here until at least 4 pm this afternoon.

Here's the pictures I received yesterday. It clearly shows that their so called smoking rocks are much larger than what one is lead to believe. These sort of incidents need to be responded to immediately not allowed to simply contaminate the air shed. EPA needs to reassess this process and ensure the Tribes that this contamination will not be continuing to impact our resources.
Kelly

These photos were taken at 2:57. We left at about 3:24 pm and the slag pile was still smoking. Did not notice a response to the smoke.

Lori
