Qualifiers

GCMS Volatiles

Qualifier	Qualifier Description
CIN	The % RSD for this compound was above 15%. The average % RSD for all compounds in the calibration met the 15% criteria specified in EPA methods 8260B/8270C.
L	Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above the control limits. Analyte not detected, data not impacted.
B	Analyte was detected in the associated Method Blank.

GCMS Semivolatiles

Qualifier	Qualifier Description
M1	The MS and/or MSD were outside control limits.
R	Sample duplicate RPD exceeded the laboratory control limit.
RL1	Reporting limit raised due to sample matrix effects.

GC Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semivolatiles

Qualifier	Qualifier Description
MHA	Due to high levels of analyte in the sample, the MS/MSD calculation does not provide useful spike recovery information.
ZX	Due to sample matrix effects, the surrogate recovery was outside the control limits.
M1	The MS and/or MSD were outside control limits.
R	Sample duplicate RPD exceeded the laboratory control limit.
Q	Poor chromatographic match to standard.

Metals-ICP

Qualifier	Qualifier Description
MHA	Due to high levels of analyte in the sample, the MS/MSD calculation does not provide useful spike recovery information.
IE	Elevated reporting limit due to interelement interference.

General Chemistry

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F	MS or MSD exceeds the control limits
F	RPD of the MS and MSD exceeds the control limits

WetChem

Qualifier	Qualifier Description
H3	Sample was received and analyzed past holding time.

Extractions

Qualifier	Qualifier Description
T6	The temperature during the 18 hour TCLP/SPLP extraction exceeded the 21-25 degrees C range stated in SW 1311/SW1312.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation may not be offered or required for all methods and analytes reported in this package. Please contact your project manager for the laboratory's current list of certified methods and analytes.

Method Summary

Client: GOLDER ASSOCIATES - MANCHESTER, NH
Project/Site: 103-87305

TestAmerica Job ID: CVE0494

Method	Method Description	Protocol	Laboratory
SW 1311	TCLP Extraction by EPA 1311		TAL CF
SW 1311/8260B	TCLP Volatile Organic Compounds by EPA Method 1311/8260B		TAL CF
SW 8260B	Volatile Organic Compounds		TAL CF
SW 9041A	VOC Preservation Check		TAL CF
SW 8270C	TCLP Semivolatile Compounds by EPA Method 1311/8270C		TAL CF
SW 8270D	Semivolatile Organics by GC/MS		TAL CF
8151	TCLP Herbicides	SW846	TAL CHI
OA-2 - 8015B	UST ANALYSIS PARAMETERS		TAL CF
SW 8081B	TCLP Pesticides by EPA Method 1311/8081A		TAL CF
SW 8082	Polychlorinated Biphenyls by EPA Method 8082		TAL CF
SW 7470A	TCLP Metals		TAL CF
SW 7471B	Total Metals by SW 846 Series Methods		TAL CF
SW 6010C	Total Metals by SW 846 Series Methods		TAL CF
SW 6010C	TCLP Metals		TAL CF
9034	Sulfide, Acid soluble and Insoluble (Titrimetric)	SW846	TAL CHI
9071B	HEM and SGT-HEM	SW846	TAL CHI
Moisture	Percent Moisture	EPA	TAL CHI
ASTM D92	General Chemistry Parameters		TAL CF
SM 2540 G	General Chemistry Parameters		TAL CF
SW 9012A Mod	General Chemistry Parameters		TAL CF
SW 9045D	General Chemistry Parameters		TAL CF

Sample Receipt and Temperature Log Form

Client: Golder Associates Project: _____

City: Manchester, New Hampshire

Date: 5/4/12 Receiver's Initials: JMH Time (Delivered): 1930

Temperature Record:

Cooler ID# (If Applicable)
002

0.7 °C / On Ice

☑ Temp Blank

☐ Temperature out of compliance

Thermometer:

☑ IR - 111531565 'D'
☐ IR - 111531506 'E'
☐ IR - 61854108 'Front'
☐ 101681126

Courier:

☐ UPS
☐ FedEx
☐ FedEx Ground
☐ US Postal Service
☐ Spee-Dee
☑ TA Courier
☐ TA Field Services
☐ Client
☐ Other

Custody seals present?
☐ Yes
Custody seals intact?
☐ Yes ☐ No

☐ Non-Conformance report started

Exceptions Noted

☐ Sample(s) not received in a cooler.
☐ Samples(s) received same day of sampling.
☐ Evidence of a chilling process
☐ No Temp. Blank. Inside temperature of cooler recorded.
☐ Temperature not taken:

purge vials

Definitions/Glossary

Client: GOLDER ASSOCIATES - MANCHESTER, NH
Project/Site: 103-87305

TestAmerica Job ID: CVK1116

Qualifiers

GCMS Volatiles

Qualifier	Qualifier Description
CIN	The % RSD for this compound was above 15%. The average % RSD for all compounds in the calibration met the 15% criteria specified in EPA methods 8260B/8270C.
ICV	ICV recovery was above control limits. Analyte not detected, data not impacted.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDA	Minimum detectable activity
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Project Number: 103-87305 **Report Date:** 12/28/12

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Performance criteria for CAM and RCP methods allow for some LCS compound failures to occur and still be within method compliance. In these instances, the specific failures are not narrated but are noted in the associated QC table. This information is also incorporated in the Data Usability format for our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples free of charge for 30 days from the date the project is completed. After 30 days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples.

Please contact Client Services at 800-624-9220 with any questions.

Project Name: JEFFERSON, IOWA **Lab Number:** L1222419
Project Number: 103-87305 **Report Date:** 12/28/12

Case Narrative (continued)

PIANO Volatiles by GC/MS

The associated samples were analyzed after the hold time had expired per client request.

Samples L1222419-03 and L1222419-04 were re-analyzed at a 5X and 10X dilution respectively, due to over-calibration concentrations of target compounds. The diluted analysis is only quantified for those compounds which were detected over the calibration range of the analytical instrument in the initial analysis.

Total Petroleum Hydrocarbons (TPH) by GC/FID

The sample was extracted and then analyzed using a gas chromatograph equipped with a flame ionization detector (GC/FID). The temperature program and associated experimental conditions were optimized to obtain maximum resolution in an eighty minute chromatographic run representative of hydrocarbons in the n-Octane (C8) to n-Tetracontane (C40) range. Qualitative evaluation of the sample is conducted by reviewing the sample chromatogram in conjunction with a chromatogram of a normal alkane series generated with the same chromatographic conditions. Chromatograms of hydrocarbon reference materials obtained from our library of 45 reference standards are also utilized to provide the best possible sample match. Quantitative determination of the sample hydrocarbon concentration is performed in accordance with EPA Method 8015M. The sample total hydrocarbon concentration and all associated quality control data are included in the report.

All quality control parameters met the specified criteria.

The following qualitative information is based on a tentative interpretation of chromatographic pattern recognition and boiling point ranges:

Total Petroleum Hydrocarbon Identification

Project Name: JEFFERSON, IOWA **Lab Number:** L1222419
Project Number: 103-87305 **Report Date:** 12/28/12

Case Narrative (continued)

Samples LIF-1-4.5' (L1222419-01), LIF-8-7.5' (L1213507-03) and LIF-12-8' (1222419-04) contains hydrocarbons eluting in the range prior to the elution of n-Nonane (C9) to after the elution of n-Tetracontane (C40).

Based on the data generated samples, Samples LIF-1-4.5' (L1222419-01), LIF-8-7.5' (L1213507-03) and LIF-12-8' (1222419-04), contain material eluting in the low and mid to high molecular weight ranges of the chromatogram. The material appears to be similar to a combination of mineral spirits and cutting oil/mystery oil type product. This combination is indicative of cutting oils. In an analysis of an undegraded product the n-alkanes are typically the dominant constituents, as seen in the petroleum reference chromatogram. As the product degrades, the n-alkanes are preferentially digested, leaving behind other constituents such as isoprenoids.

The analytical testing of the samples identified a pattern of constituents such as isoprenoids. The absence of alkanes and presence of constituents such as isoprenoids indicate that the product has undergone degradation in samples LIF-1-4.5' (L1222419-01) and LIF-8-7.5'' (L1213507-03). Sample LIF-12-8' (1222419-04) shows the presence of alkanes indicating the product is relatively fresh.

Sample LIF-8-7.5' (L1213507-03) contains hydrocarbons eluting in the range prior to the elution of n-Decane (C10) to after the elution of n-Tetracontane (C40). Based on the data generated samples, sample LIF-8-7.5' (L1213507-03), contains material eluting in the mid- to high molecular weight ranges of the chromatogram. The material appears to be similar to a hydraulic oil material however this is not an identical chromatographic match to any reference standard contained in the petroleum library. In addition, there are three extraneous peaks which elute in the n-Decane (C10) to n-Dodecane (C12) range which cannot be identified under this method.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

*Values in parentheses indicate holding time in days

Project Name:	JEFFERSON, IOWA	**Lab Number:**	L1222419
Project Number:	103-87305	**Report Date:**	12/28/12

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NI	- Not Ignitable.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

1	- The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A	- Spectra identified as "Aldol Condensation Product".
B	- The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than five times (5x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit.
C	- Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
D	- Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
E	- Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
G	- The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.
H	- The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
I	- The RPD between the results for the two columns exceeds the method-specified criteria; however, the lower value has been reported

Report Format: Data Usability Report

Project Name:	JEFFERSON, IOWA	**Lab Number:**	L1222419
Project Number:	103-87305	**Report Date:**	12/28/12

Data Qualifiers

due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the reporting limit (RL) for the sample.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certificate/Approval Program Summary

Last revised August 3, 2012 – Mansfield Facility

The following list includes only those analytes/methods for which certification/approval is currently held.
For a complete listing of analytes for the referenced methods, please contact your Alpha Customer Service Representative.

Connecticut Department of Public Health Certificate/Lab ID: PH-0141.

Wastewater/Non-Potable Water (Inorganic Parameters: pH, Turbidity, Conductivity, Alkalinity, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Strontium, Thallium, Tin, Titanium, Vanadium, Zinc, Total Residue (Solids), Total Suspended Solids (non-filterable). Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, Acid Extractables, Benzidines, Phthalate Esters, Nitrosamines, Nitroaromatics & Isophorone, PAHs, Haloethers, Chlorinated Hydrocarbons, Volatile Organics.)

Solid Waste/Soil (Inorganic Parameters: pH, Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Titanium, Vanadium, Zinc, Total Organic Carbon, Corrosivity, TCLP 1311, SPLP 1312. Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, Volatile Organics, Acid Extractables, Benzidines, Phthalates, Nitrosamines, Nitroaromatics & Cyclic Ketones, PAHs, Haloethers, Chlorinated Hydrocarbons.)

Florida Department of Health Certificate/Lab ID: E87814. ***NELAP Accredited.***

Non-Potable Water (Inorganic Parameters: SM2320B, SM2540D, SM2540G.)

Solid & Chemical Materials (Inorganic Parameters: 6020, 7470, 7471, 9045. Organic Parameters: EPA 8260, 8270, 8082, 8081.)

Air & Emissions (EPA TO-15.)

Louisiana Department of Environmental Quality Certificate/Lab ID: 03090. ***NELAP Accredited.***

Non-Potable Water (Inorganic Parameters: EPA 180.1, 245.7, 1631E, 3020A, 6020A, 7470A, 9040, 9050A, SM2320B, 2540D, 2540G, 4500H-B, Organic Parameters: EPA 3510C, 3580A, 3630C, 3640A, 3660B, 3665A, 5030B, 8015D, 3570, 8081B, 8082A, 8260B, 8270C, 8270D.)

Solid & Chemical Materials (Inorganic Parameters: EPA 1311, 3050B, 3051A, 3060A, 6020A, 7196A, 7470A, 7471B, 7474, 9040B, 9045C, 9060. Organic Parameters: EPA 3540C, 3570, 3580A, 3630C, 3640A, 3660, 3665A, 5035, 8015D, 8081B, 8082A, 8260B, 8270C, 8270D.)

Biological Tissue (Inorganic Parameters: EPA 6020A. Organic Parameters: EPA 3570, 3510C, 3610B, 3630C, 3640A, 8270C, 8270D.)

Air & Emissions (EPA TO-15.)

New Hampshire Department of Environmental Services Certificate/Lab ID: 2206. ***NELAP Accredited.***

Non-Potable Water (Inorganic Parameters: EPA 180.1, 1631E, 6020A, 7470A, 9040B, 9050A, SM2540D, 2540G, 4500H+B, 2320B, 3020A, . Organic Parameters: EPA 3510C, 3630C, 3640A, 3660B, 8081B, 8082A, 8270C, 8270D, 8015D.)

Solid & Chemical Materials (Inorganic Parameters: SW-846 1311, 3050B, 3051A, 6020A, 7471B, 9040B, 9045C. Organic Parameters: SW-846 3540C, 3580A, 3630C, 3640A, 3660B, 3665A, 8270C, 8015D, 8082A, 8081B.)

New Jersey Department of Environmental Protection Certificate/Lab ID: MA015. ***NELAP Accredited.***

Non-Potable Water (Inorganic Parameters: SW-846 1312, 3020A, SM2320B, SM2540D, 2540G, 4500H-B, EPA 180.1, 1631E, SW-846 7470A, 9040C, 6020A, 9050A. Organic Parameters: SW-846 3510C, 3580A, 3630C, 3640A, 3660B, 3665A, 8015D, 8081B, 8082A, 8270C, 8270D)

Solid & Chemical Materials (Inorganic Parameters: SW-846 1311, 1312, 3050B, 3051A, 6020A, 7471B, 7474, 9040B, 9040C, 9045C, 9045D, 9060. Organic Parameters: SW-846 3540C, 3570, 3580A, 3630C, 3640A, 3660B, 3665A, 8081B, 8082A, 8270C, 8270D, 8015D.)

Atmospheric Organic Parameters (EPA 3C, TO-15, TO-10A, TO-13A-SIM.)

Biological Tissue (Inorganic Parameters: SW-846 6020A. Organic Parameters: SW-846 8270C, 8270D, 3510C, 3570, 3610C, 3630C, 3640A)

New York Department of Health Certificate/Lab ID: 11627. ***NELAP Accredited.***

Non-Potable Water (Inorganic Parameters: SM2320B, SM2540D, 6020A, 1631E, 7470A, 9050A, EPA 180.1, 3020A. Organic Parameters: EPA 8270C, 8270D, 8081B, 8082A, 3510C.)

Solid & Hazardous Waste (Inorganic Parameters: EPA 6020A, 7471B, 7474, 9040C, 9045D. Organic Parameters: EPA 8270C, 8270D, 8081B, 8082A, 1311, 3050B, 3580A, 3570, 3051A.)

Air & Emissions (EPA TO-15, TO-10A.)

Pennsylvania Certificate/Lab ID: 68-02089 ***NELAP Accredited***

Non-Potable Water (Inorganic Parameters: 1312, 1631E, 180.1, 3020A, 6020A, 7470A, 9040B, 9050A, 2320B, 2540D, 2540G, SM4500H+-B. Organic Parameters: 3510C, 3580A, 3630C, 3640A, 3660B, 3665A, 8015D, 8081B, 8082A, 8270C, 8270D .)

Solid & Hazardous Waste (Inorganic Parameters: EPA 1311, 3051A, 6020A, 7471B, 7474 9040B, 9045C, 9060. Organic Parameters: EPA3050B, 3540C, 3570, 3580A, 3630C, 3640A, 3660B, 3665A, 8270C, 8270D, 8081B, 8015D, 8082A.)

Rhode Island Department of Health Certificate/Lab ID: LAO00299. ***NELAP Accredited via NJ-DEP.***

Refer to NJ-DEP Certificate for Non-Potable Water.

Texas Commission of Environmental Quality Certificate/Lab ID: T104704419-08-TX. ***NELAP Accredited.***

Solid & Chemical Materials (Inorganic Parameters: EPA 6020, 7470, 7471, 1311, 9040, 9045, 9060. Organic Parameters: EPA 8015, 8270, 8081, 8082.)

Air (Organic Parameters: EPA TO-15)

Virginia Division of Consolidated Laboratory Services Certificate/Lab ID:460194. ***NELAP Accredited.***

Non-Potable Water (Inorganic Parameters:EPA 3020A, 6020A, 245.7, 9040B. Organic Parameters: EPA 3510C, 3640A, 3660B, 3665A, 8270C, 8270D, 8082A, 8081B, 8015D.)

Solid & Chemical Materials (Inorganic Parameters: EPA 6020A,7470A,7471B,9040B,9045C,3050B,3051, 9060. Organic Parameters: EPA 3540C, 3580A, 3630C, 3640A, 3660B, 3665A, 3570, 8270C, 8270D, 8081B, 8082A, 8015D.)

Washington State Department of Ecology Certificate/Lab ID: C954. *Non-Potable Water* (Inorganic Parameters: SM2540D, 180.1, 1631E.)

Solid & Chemical Materials (Inorganic Parameters: EPA 6020, 7470, 7471, 7474, 9045C, 9050A, 9060. Organic Parameters: EPA 8081, 8082, 8015, 8270.)

U.S. Army Corps of Engineers

Department of Defense, L-A-B Certificate/Lab ID: L2217.01.

Non-Potable Water (Inorganic Parameters: EPA 6020A, SM4500H-B. Organic Parameters: 3020A, 3510C, 8270C, 8270D, 8270C-ALK-PAH, 8270D-ALK-PAH, 8082A, 8081B, 8015D-SHC, 8015D.)

Solid & Hazardous Waste (Inorganic Parameters: EPA 1311, 3050B, 6020A, 7471A, 9045C, 9060, SM 2540G, ASTM D422-63. Organic Parameters: EPA 3580A, 3570, 3540C, 8270C, 8270D, 8270C-ALK-PAH, 8270D-ALK-PAH 8082A, 8081B, 8015D-SHC, 8015D.

Air & Emissions (EPA TO-15.)

Analytes Not Accredited by NELAP

Certification is not available by NELAP for the following analytes: **8270C:** Biphenyl. **TO-15:** Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 2-Methylnaphthalene, 1-Methylnaphthalene.

Golder Associates

SITE DESCRIPTION

Project Name: Electrolux/Jefferson/IA
Project Number: 103-87305
Location: Jefferson, Iowa

WEATHER CONDITIONS

Temperature: 73° / 60°S
Wind: CALM / 5-10 mph
Precipitation: 0 / MOSTLY SUNNY

SAMPLE DESCRIPTION

Sample ID: MW-28
Date: 5/21/12 / 5/23/12*
Time at Well Site: 1505 / 0820
Time of Sample Collection: 1533 / 0825
Sampled by: JDJ
Sampling Method: Peristaltic Pump
Type of Sampling Equipment: Poly & Silicon tubing

FIELD BLANK NOTES

COLUMN OF WATER IN WELL BEFORE PURGE

Total Depth of Well: 12.62 ft TOC
Depth to Water : 11.53 ft TOC
Column of Water in Well: 1.09 ft
Depth to Water after Purge: ft TOC

SAMPLE DESCRIPTION

Sample ID: MW-11
Date: 12/11/12
Time at Well Site: 11:40
Time of Sample Collection: 14:15 12/13/12
Sampled by: PVM
Sampling Method: Peristaltic Pump
Type of Sampling Equipment: Poly & Silicon tubing

14/13/12 voc collected using pump because low volume of water present in MW. Did not sample TEH, not enough water.

VOLUME OF WATER TO BE PURGED

Casing Inside Diameter: 2 inches
Casing Volume: 0.163 gal/ft
Column of Water in Well: 1.09 feet
Volume of Water in Well: 0.177 gallons
Well Volumes to Purge: 5
Min. Volume to be Purged: 0.885 gallons
Method of Purging: Geo pump
Well Purged Dry?: Yes No

Appearance of Sample: Cloudy, yellow.

DTW well dry

Date: 12/13/12
Time at Well Site: 9:35
Time of Sample Collection: 10:05
Sampled by: DVM
Sampling Method: Peristaltic Pump
Type of Sampling Equipment: Poly & Silicon tubing

FIELD BLANK NOTES

Field Blank Name: —
Field Blank /Rinse Water type: —
—
Lot Number: —
Analyses: —

VOLUME OF WATER TO BE PURGED

Casing Inside Diameter: 2 inches
Casing Volume: 0.163 gal/ft
Column of Water in Well: 6.93 feet
Volume of Water in Well: 1.13 gallons
Well Volumes to Purge: 5
Min. Volume to be Purged: 5.65 gallons
Method of Purging: GeoPump
Well Purged Dry?: Yes (No)

COLUMN OF WATER IN WELL BEFORE PURGE

Total Depth of Well: 11.45 ft TOC
Depth to Water : 4.52 ft TOC
Column of Water in Well: 6.93 ft
Depth to Water after Purge: ____ ft TOC

Appearance of Sample: Clear

GROUNDWATER SAMPLE COLLECTION FORM

Golder Associates

SITE DESCRIPTION

Project Name: Electrolux/Jefferson/IA
Project Number: 103-87305
Location: Jefferson, Iowa

SAMPLE DESCRIPTION

Sample ID: MW-19
Date: 7/15/14
Time at Well Site: 920
Time of Sample Collection: 1120 on 7/18/14
Sampled by: ATK
Sampling Method: Peristaltic/Bladder Pump
Type of Sampling Equipment: Poly & Silicon tubing

WEATHER CONDITIONS

Temperature: Sunny, 70's
Wind: light
Precipitation: none

FIELD DUPLICATE NOTES

Field Duplicate ID: N/A
Notes:

VOLUME OF WATER TO BE PURGED

Casing Inside Diameter: 1.5 inches
Casing Volume: _____ liters/ft
Column of Water in Well: _____ feet
Volume of Water in Well: _____ liters
Well Volumes to Purge: _____
Min. Volume to be Purged: _____ liters
Method of Purging: Peri
Well Purged Dry?: Yes No

COLUMN OF WATER IN WELL BEFORE PURGE

Total Depth of Well: 11.81 ft TOC
Depth to Water: 2.45 ft TOC
Column of Water in Well: _____ ft
Depth to Water after Purge: 10.90 ft TOC

Appearance of Sample: clear water, slight turbidity

SITE DESCRIPTION

Project Name: Electrolux/Jefferson/IA
Project Number: 103-87305
Location: Jefferson, Iowa

SAMPLE DESCRIPTION

Sample ID: MW-65
Date: 12/18/14
Time at Well Site: 1010
Time of Sample Collection: 1155
Sampled by: A. Phillips
Sampling Method: Peristaltic/Bladder Pump
Type of Sampling Equipment: Poly & Silicon tubing

WEATHER CONDITIONS

Temperature: cloudy, 23°F
Wind: 0-5 mph
Precipitation: none

FIELD DUPLICATE NOTES

Field Duplicate ID: "Dup" collected @ 1215
Notes: checked meter calibration shortly after beginning purge because DO seemed low. Cal was OK so continues with purge/sampling.

VOLUME OF WATER TO BE PURGED

Casing Inside Diameter: 2 inches
Casing Volume: _____ liters/ft
Column of Water in Well: _____ feet
Volume of Water in Well: _____ liters
Well Volumes to Purge: _____
Min. Volume to be Purged: _____ liters
Method of Purging: _____
Well Purged Dry?: Yes (No)

COLUMN OF WATER IN WELL BEFORE PURGE

Total Depth of Well: 72.89 ft TOC
Depth to Water: 27.42 ft TOC
Column of Water in Well: 45.47 ft
Depth to Water after Purge: 33.83 ft TOC

Appearance of Sample: slightly turbid

No additional comments.

Receipt
The samples were received on 4/23/2014 9:25 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 0.1º C.

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) associated with batch 46054 recovered outside the control limit for Vinyl chloride (-27 %D) 1,2,4-Trichlorobenzene (-25.6 %D) Chloroethene and Trichlorofluoromethane (-24.9 %dD). The LCS associated with this CCV passed using CCV critria for the affected analytes; therefore, the data have been reported. The following samples are impacted: (CCV 310-46054/3).

Method(s) 8260C: The laboratory control sample (LCS) for batch 46054 recovered outside control limits for the following analyte : 1,1,1,2-Tetrachloroethane. The analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

No other analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD exceeds the control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Surrogate Summary

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Receipt
The samples were received on 4/24/2014 9:11 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.4º C.

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) associated with batch 46296 recovered above the upper control limit for Chlorobromomethane (22.4 %D), 1,1,2-Trichloroethane (21.9 %D), 1,2-Dichloroethane (22 %D) and Tetrachloroethene (24.8 %D). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: (CCV 310-46296/4).

Method(s) 8260C: The laboratory control sample (LCS) for batch 46296 recovered outside control limits for the following analyte : 1,1-Dichloroethane. The analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260C: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for batch 46856 recovered outside control limits for the following analytes: cis-1,3-Dichloropropene, Isopropylbenzene, 1,1,1-Trichloroethane, and 2,2-Dichloropropane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

No other analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method(s) 6010C: The following sample was diluted due to the presence of an interferent. MW-25S (310-29313-5). Elevated reporting limits (RLs) are provided.

No other analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Method(s) 9056A: The following sample was diluted due to the nature of the sample matrix: MW-25D (310-29313-4). Elevated reporting limits (RLs) are provided for chloride.

Method(s) 9056A: The following sample was diluted due to the nature of the sample matrix: MW-25S (310-29313-5). Elevated reporting limits (RLs) are provided for sulfate.

No other analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Surrogate Summary

Client: Golder Associates Inc.
Project/Site: Electrolux - Jefferson, IA

TestAmerica Job ID: 310-29313-1
SDG: 103-87305

Method: 8260C - Volatile Organic Compounds by GC/MS

Matrix: Ground Water **Prep Type: Total/NA**

		Percent Surrogate Recovery (Acceptance Limits)		
		BFB	DBFM	TOL
Lab Sample ID	Client Sample ID	(75-110)	(75-120)	(80-120)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments
No additional comments.

Receipt
The samples were received on 4/25/2014 9:18 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 0.0º C and 0.0º C.

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) associated with batch 46760 recovered above the upper control limit for Vinyl chloride (26.0%). The LCS passes CCV criteria; therefore, the data have been reported. The following samples are impacted: (CCV 310-46760/4).

No other analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Method(s) 9056A: The following samples were diluted due to the nature of the sample matrix: MW-63 (310-29420-1), MW-46 (310-29420-3), and MW-61 (310-29420-2). Elevated reporting limits (RLs) are provided for chloride.

No other analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery exceeds the control limits
F2	MS/MSD RPD exceeds control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Certification Summary

Client: Golder Associates Inc.
Project/Site: Electrolux - Jefferson, IA

TestAmerica Job ID: 310-29420-1

Laboratory: TestAmerica Cedar Falls

All certifications held by this laboratory are listed. Not all certifications are applicable to this report.

Authority	Program	EPA Region	Certification ID	Expiration Date
AIHA	IHLAP		101044	11-01-14
Illinois	NELAP	5	200024	11-29-14
Iowa	State Program	7	7	12-01-13 *
Kansas	NELAP	7	E-10341	01-31-15
Minnesota	NELAP	5	019-999-319	12-31-14
North Dakota	State Program	8	R-186	09-29-14
Oregon	NELAP	10	IA100001	09-29-14
Wisconsin	State Program	5	999917270	08-31-14

* Expired certification is currently pending renewal and is considered valid.

Method Summary

Client: Golder Associates Inc.
Project/Site: Electrolux - Jefferson, IA

TestAmerica Job ID: 310-29420-1

Method	Method Description	Protocol	Laboratory
8260C	Volatile Organic Compounds by GC/MS	SW846	TAL CF
9056A	Anions, Ion Chromatography	SW846	TAL CF
6010C	Metals (ICP)	SW846	TAL CF
9060A	Organic Carbon, Total (TOC)	SW846	TAL CF
SM 4500 NO2 B	Nitrogen, Nitrite	SM	TAL CF
SM 4500 NO3 E	Nitrogen, Nitrate	SM	TAL CF

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Surrogate Summary

Client: Golder Associates Inc.
Project/Site: Electrolux - Jefferson, IA

TestAmerica Job ID: 310-29499-1
SDG: 103-87305

Method: 8260C - Volatile Organic Compounds by GC/MS

Matrix: Ground Water **Prep Type: Total/NA**

		Percent Surrogate Recovery (Acceptance Limits)		
		BFB	DBFM	TOL
Lab Sample ID	Client Sample ID	(75-110)	(75-120)	(80-120)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

RE: **ELECTROLUX / 103-87305**
Microseeps Workorder: 12016

Dear Jim Peace:

Enclosed are the analytical results for sample(s) received by the laboratory on Monday, April 28, 2014. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Robbin Robl 05/08/2014

ANALYTICAL RESULTS QUALIFIERS

Workorder: 12016 ELECTROLUX / 103-87305

DEFINITIONS/QUALIFIERS

Disclaimer : The Pennsylvania Department of Environmental Protection (PADEP) has decided to no longer recognize analyses that do not produce data for primary compliance, for NELAP accreditation. The methods affected by this decision are AM20GAx, AM21G, SW846 7199 and AM4.02. The laboratory shall continue to administer the NELAP/TNI standard requirements in the performance of these methods.

MDL	Method Detection Limit. Can be used synonymously with LOD; Limit Of Detection.
PQL	Practical Quanitation Limit. Can be used synonymously with LOQ; Limit Of Quantitation.
ND	Not detected at or above reporting limit.
DF	Dilution Factor.
S	Surrogate.
RPD	Relative Percent Difference.
% Rec	Percent Recovery.
U	Indicates the compound was analyzed for, but not detected at or above the noted concentration.
J	Estimated concentration greater than the set method detection limit (MDL) and less than the set reporting limit (PQL).

SAMPLER NAME AND SIGNATURE

PRINT Name of SAMPLER: Andrew Koff

SIGNATURE of SAMPLER: [signature] DATE Signed (MM/DD/YY): 4/25/14

Temp in °C | Received on Ice (Y/N) | Custody Sealed Cooler (Y/N) | Samples Intact (Y/N)

*Important Note: By signing this form you are accepting Pace's NET 30 day payment terms and agreeing to late charges of 1.5% per month for any invoices not paid within 30 days.

Cooler Receipt Form

Client Name: Golder **Project:** Electrolux/ 103-87305 **Lab Work Order:** 12016

A. Shipping/Container Information (circle appropriate response)

Courier: (FedEx) UPS USPS Client Other:_____ **Air bill Present:** (Yes) No

Tracking Number: 8033 9316 9669

Custody Seal on Cooler/Box Present: (Yes) No **Seals Intact:** (Yes) No

Cooler/Box Packing Material: (Bubble Wrap) Absorbent Foam Other:_____

Type of Ice: (Wet) Blue None **Ice Intact:** (Yes) Melted

Cooler Temperature: 29 C **Radiation Screened:** Yes (No) **Chain of Custody Present:** (Yes) No

Comments:_____

B. Laboratory Assignment/Log-in (check appropriate response)

	YES	NO	N/A	Comment Reference non-Conformance
Chain of Custody properly filled out	✓			
Chain of Custody relinquished	✓			
Sampler Name & Signature on COC	✓			
Containers intact	✓			
Were samples in separate bags	✓			
Sample container labels match COC Sample name/date and time collected	✓			
Sufficient volume provided	✓			
Microseeps containers used	✓			
Are containers properly preserved for the requested testing? (as labeled)	✓			
If an unknown preservation state, were containers checked? Exception: VOA's coliform			✓	If yes, see pH form.
Was volume for dissolved testing field filtered, as noted on the COC? Was volume received in a preserved container?			✓	

Comments:_____

Cooler contents examined/received by : LG **Date:** 4.28.14

No additional comments.

Receipt
The samples were received on 7/16/2014 9:44 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 0.9º C.

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) associated with batch 54497 recovered above the upper control limit for Carbon tetrachloride (30.4 %D), Vinyl chloride (30.6 %D), Chloroethane (31.4 %D), Dichlorodifluoromethane (58.5 %D), 1,2-Dichloroethane (20.5 %D), 1,1,1-Trichloroethane (23.4 %D), and Trichlorofluoromethane (68.6 %D). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: (CCV 310-54497/3).

Method(s) 8260C: The laboratory control sample (LCS) for batch 54497 recovered outside control limits for the following analytes: Dichlorodifluoromethane and 2,2-Dichloropropane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Method(s) 9056A: The following sample was diluted due to the nature of the sample matrix: MW-62 (310-34864-1). Elevated reporting limits (RLs) are provided for chloride.

Method(s) 9056A: The following sample was diluted due to the nature of the sample matrix: MW-65 (310-34864-2). Elevated reporting limits (RLs) are provided for sulfate.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD exceeds the control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

No additional comments.

Receipt
The samples were received on 7/17/2014 9:12 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 0.6º C.

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) associated with batch 54586 recovered above the upper control limit for Chlorethane (21.1 %D), Trichlorofluoromethane (29 %D), and Methyl tert-butyl ether (21.4 D). The LCS associated with this CCV passes using CCV criteria for the affected analytes; therefore, the data have been reported. The following samples are impacted: (CCV 310-54586/3).

Method(s) 8260C: The continuing calibration verification (CCV) associated with batch 54969 recovered above the upper control limit for Carbon tetrachloride (22.8 %D), 1,2-Dichloroethane (27.3 %D), and 1,1,1-Trichloroethane (21.2 %D). The LCS associated with this CCV passes using CCV criteria for the affected analytes; therefore, the data have been reported. The following samples are impacted: (CCV 310-54969/3).

Method(s) 8260C: The continuing calibration verification (CCV) associated with batch 54969 recovered above the upper control limit for Trichlorofluoromethane (29.1 %D). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: (CCV 310-54969/3).

Method(s) 8260C: The laboratory control sample (LCS) for batch 54969 recovered outside control limits for the following analytes: Dichlorodifluoromethane and Trichlorofluoromethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method(s) 6010C: The following sampl was diluted due to the presence of interferents: MW-28 (310-35011-3). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method(s) 9056A: The following samples were diluted due to the nature of the sample matrix: MW-61 (310-35011-4), MW-63 (310-35011-5). Elevated reporting limits (RLs) are provided for chloride.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Surrogate	*%Recovery*	*Qualifier*	*Limits*	*Prepared*	*Analyzed*	*Dil Fac*
4-Bromofluorobenzene (Surr)	*101*		*75 - 120*		*07/18/14 11:27*	*1*
Dibromofluoromethane (Surr)	*104*		*75 - 120*		*07/18/14 11:27*	*1*
Toluene-d8 (Surr)	*114*		*80 - 120*		*07/18/14 11:27*	*1*

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
F2	MS/MSD RPD exceeds control limits
*	LCS or LCSD exceeds the control limits

General Chemistry

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery exceeds the control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Surrogate Summary

Client: Golder Associates Inc.
Project/Site: Electrolux - Jefferson, IA

TestAmerica Job ID: 310-35011-1
SDG: 103-8705

Method: 8260C - Volatile Organic Compounds by GC/MS

Matrix: Ground Water **Prep Type: Total/NA**

		Percent Surrogate Recovery (Acceptance Limits)		
		BFB	DBFM	TOL
Lab Sample ID	Client Sample ID	(75-120)	(75-120)	(80-120)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

No additional comments.

Receipt
The samples were received on 7/18/2014 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 0.0º C and 1.6º C.

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) associated with batch 54969 recovered above the upper control limit for Carbon tetrachloride (22.8 %D), 1,2-Dichloroethane (27.3 %D), and 1,1,1-Trichloroethane (21.2 %D). The LCS associated with this CCV passes using CCV criteria for the affected analytes; therefore, the data have been reported. The following samples are impacted: (CCV 310-54969/3).

Method(s) 8260C: The continuing calibration verification (CCV) associated with batch 54969 recovered above the upper control limit for Trichlorofluoromethane (29.1 %D). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: (CCV 310-54969/3).

Method(s) 8260C: The laboratory control sample (LCS) for batch 54969 recovered outside control limits for the following analytes: Dichlorodifluoromethane and Trichlorofluoromethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260C: Surrogate recovery for the following sample was outside the upper control limit: MW-57 (310-35091-8). This sample did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Method(s) 9056A: The following samples were diluted due to the nature of the sample matrix: MW-46 (310-35091-6) and Dup-02 (310-35091-9). Elevated reporting limits (RLs) are provided for chloride.

Method(s) 9056A: The following sample was diluted due to the nature of the sample matrix: MW-25S (310-35091-1). Elevated reporting limits (RLs) are provided for sulfate.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
X	Surrogate is outside control limits
*	LCS or LCSD exceeds the control limits

HPLC/IC

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Login Sample Receipt Checklist

Client: Golder Associates Inc.

Job Number: 310-35091-1

Login Number: 35091

List Source: TestAmerica Cedar Falls

List Number: 1

Creator: Facciani, Melene K

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

No additional comments.

Receipt
The samples were received on 7/19/2014 9:35 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 0.1º C.

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) associated with batch 54969 recovered above the upper control limit for Carbon tetrachloride (22.8 %D), 1,2-Dichloroethane (27.3 %D), and 1,1,1-Trichloroethane (21.2 %D). The LCS associated with this CCV passes using CCV criteria for the affected analytes; therefore, the data have been reported. The following samples are impacted: (CCV 310-54969/3).

Method(s) 8260C: The continuing calibration verification (CCV) associated with batch 54969 recovered above the upper control limit for Trichlorofluoromethane (29.1 %D). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: (CCV 310-54969/3).

Method(s) 8260C: The laboratory control sample (LCS) for batch 54969 recovered outside control limits for the following analytes: Dichlorodifluoromethane and Trichlorofluoromethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260C: The continuing calibration verification (CCV) associated with batch 56036 recovered above the upper control limit for Dibromomethane (25.2 %D), Chlorobromomethane (24.5 %D), Dichlorobromomethane (29.1 %D), Benzene (22.1 %D), cis-1,2-Dichloroethene (20.9 %D), 1,3-Dichloropropane (27.2 %D), 1,2-Dichloropropane (26.2 %D), Methyl tert-butyl ether (20.8 %D), and 1,1-Dichloroethane (21 %D). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: (CCV 310-56036/3).

Method(s) 8260C: The laboratory control sample (LCS) for batch 56036 recovered outside control limits for the following analytes: Dibromomethane, Dichlorobromomethane, Benzene, 1,3-Dichloropropane, Chloroform, Chloromethane, 2,2-Dichloropropane, 2-Butanone, and 1,2-Dichloropropane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD exceeds the control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

RE: **ELECTROLUX / 103-87305**
Microseeps Workorder: 12784

Dear Jim Peace:

Enclosed are the analytical results for sample(s) received by the laboratory on Monday, July 21, 2014. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Robbin Robl 07/31/2014

PROJECT SUMMARY

Workorder: 12784 ELECTROLUX / 103-87305

Sample Comments

Lab ID: 127840006 **Sample ID:** MW-61 **Sample Type:** N

The sample was originally analyzed on 07/28/2014. Sample was re-analyzed on 07/31/2014 to confirm the reported concentrations. The resulting re-analysis was outside the established holding time period.

ANALYTICAL RESULTS QUALIFIERS

Workorder: 12784 ELECTROLUX / 103-87305

DEFINITIONS/QUALIFIERS

Disclaimer : The Pennsylvania Department of Environmental Protection (PADEP) has decided to no longer recognize analyses that do not produce data for primary compliance, for NELAP accreditation. The methods affected by this decision are AM20GAx, AM21G, SW846 7199 and AM4.02. The laboratory shall continue to administer the NELAP/TNI standard requirements in the performance of these methods.

MDL	Method Detection Limit. Can be used synonymously with LOD; Limit Of Detection.
PQL	Practical Quanitation Limit. Can be used synonymously with LOQ; Limit Of Quantitation.
ND	Not detected at or above reporting limit.
DF	Dilution Factor.
S	Surrogate.
RPD	Relative Percent Difference.
% Rec	Percent Recovery.
U	Indicates the compound was analyzed for, but not detected at or above the noted concentration.
J	Estimated concentration greater than the set method detection limit (MDL) and less than the set reporting limit (PQL).

Cooler Receipt Form

Client Name: Golder Project: Electrolux Lab Work Order: 12784

A. Shipping/Container Information (circle appropriate response)

Courier: (FedEx) UPS USPS Client Other:_____ Air bill Present: (Yes) No

Tracking Number: 803727575627

Custody Seal on Cooler/Box Present: (Yes) No Seals Intact: (Yes) No

Cooler/Box Packing Material: Bubble Wrap Absorbent Foam Other:_____

Type of Ice: Wet Blue None Ice Intact: Yes Melted

Cooler Temperature:_____ Radiation Screened: Yes No Chain of Custody Present: Yes No

Comments:_____

B. Laboratory Assignment/Log-in (check appropriate response)

	YES	NO	N/A	Comment Reference non-Conformance
Chain of Custody properly filled out	✓			
Chain of Custody relinquished	✓			
Sampler Name & Signature on COC	✓			
Containers intact	✓			
Were samples in separate bags	✓			
Sample container labels match COC Sample name/date and time collected	✓			
Sufficient volume provided	✓			
Microseeps containers used	✓			
Are containers properly preserved for the requested testing? (as labeled)	✓			
If an unknown preservation state, were containers checked? Exception: VOA's coliform			✓	If yes, see pH form.
Was volume for dissolved testing field filtered, as noted on the COC? Was volume received in a preserved container?			✓

No additional comments.

Receipt
The samples were received on 10/8/2014 9:20 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was -0.2º C.

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) associated with batch 64845 recovered above the upper control limit for Trichlorofluoromethane (20.2 %D). The LCS associated with this CCV passes using CCV criteria for the affected analytes; therefore, the data have been reported. The following samples are impacted: (CCV 310-64845/3).

Method(s) 8260C: The continuing calibration verification (CCV) analyzed in batch 64963 was outside the method criteria for the following analytes: Carbon tetrachloride (23.4 %D), 1,1-Dichloropropene (22.1 %D), Tetrachloroethene (23 %D), and 1,1,1-Trichloroethane (23.7 %D), A LCS was analyzed with the affected samples and found to be acceptable using CCV criteria.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Method(s) 9056A: The following sample was diluted due to the nature of the sample matrix: MW-62 (310-40818-1). Elevated reporting limits (RLs) are provided for chloride.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Toluene-d8 (Surr)	*95*		*80 - 120*		*10/17/14 11:22*	*1*

Qualifiers

General Chemistry

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery exceeds the control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments
No additional comments.

Receipt
The samples were received on 10/9/2014 9:12 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 0.6º C.

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) analyzed in batch 64963 was outside the method criteria for the following analytes: Carbon tetrachloride (23.4 %D), 1,1-Dichloropropene (22.1 %D), Tetrachloroethene (23 %D), and 1,1,1-Trichloroethane (23.7 %D), A LCS was analyzed with the affected samples and found to be acceptable using CCV criteria.

Method(s) 8260C: The continuing calibration verification (CCV) associated with batch 65150 recovered above the upper control limit for Carbon tetrachloride(24.4%D), 1,1-Dichloropropene(25.5%D), Tetrachloroethene(32.1%D), 1,1,1-Trichloroethane(25.6%D), Trichloroethene(22.5%D), and trans-1,2-Dichloroethene(21.5%D). The LCS associated with this CCV passses CCV criteria for the affected analytes; therefore, the data have been reported. The following samples are impacted: (CCV 310-65150/3).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Method(s) 9056A: The following sample was diluted due to the nature of the sample matrix: MW-61 (310-40985-3). Elevated reporting limits (RLs) are provided for chloride.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments
No additional comments.

Receipt
The samples were received on 10/10/2014 9:15 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were -0.5º C and 0.3º C.

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) associated with batch 65150 recovered above the upper control limit for Carbon tetrachloride(24.4%D), 1,1-Dichloropropene(25.5%D), Tetrachloroethene(32.1%D), 1,1,1-Trichloroethane(25.6%D), Trichloroethene(22.5%D), and trans-1,2-Dichloroethene(21.5%D). The LCS associated with this CCV passses CCV criteria for the affected analytes; therefore, the data have been reported. The following samples are impacted: (CCV 310-65150/3).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Method(s) 9056A: The following sample was diluted due to the nature of the sample matrix: MW-46 (310-41134-3). Elevated reporting limits (RLs) are provided for chloride.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Surrogate	*%Recovery*	*Qualifier*	*Limits*	*Prepared*	*Analyzed*	*Dil Fac*
4-Bromofluorobenzene (Surr)	*99*		*75 - 120*		*10/20/14 11:12*	*1*
Dibromofluoromethane (Surr)	*100*		*75 - 120*		*10/20/14 11:12*	*1*
Toluene-d8 (Surr)	*96*		*80 - 120*		*10/20/14 11:12*	*1*

Qualifiers

General Chemistry

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery exceeds the control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Surrogate Summary

Client: Golder Associates Inc.
Project/Site: Electrolux - Jefferson, IA

TestAmerica Job ID: 310-41134-1
SDG: 103-87305

Method: 8260C - Volatile Organic Compounds by GC/MS

Matrix: Ground Water **Prep Type: Total/NA**

		Percent Surrogate Recovery (Acceptance Limits)		
		BFB	DBFM	TOL
Lab Sample ID	Client Sample ID	(75-120)	(75-120)	(80-120)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments
No additional comments.

Receipt
The samples were received on 10/11/2014 9:50 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 0.2º C and 0.3º C.

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) associated with batch 65169 recovered above the upper control limit for Trichlorofluorometane (20.3 %D). The LCS associated with this CCV passes using CCV criteria for the affected analytes; therefore, the data have been reported. The following samples are impacted: (CCV 310-65169/3).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Method(s) 9056A: The following sample was diluted due to the nature of the sample matrix: MW-25S (310-41248-3). Elevated reporting limits (RLs) are provided for sulfate.

Method(s) SM 4500 NO3 E: The reference method requires samples to be between a pH of 7-9. The following sample was received at a pH of 6.9: MW-28 (310-41248-5). The sample was adjusted to the appropriate pH in the laboratory.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery exceeds the control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

RE: **ELECTROLUX / 103087305**
Microseeps Workorder: 13619

Dear Jim Peace:

Enclosed are the analytical results for sample(s) received by the laboratory on Monday, October 13, 2014. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Robbin Robl 10/24/2014

PROJECT SUMMARY

Workorder: 13619 ELECTROLUX / 103087305

Batch Comments

Batch: DISG/4107 - AM20GAX Water QC

The percent recovery for the laboratory control sample was below laboratory control limits. Analytes Propene and n-Butane. Results associated to the analytes in samples may be bias low.

ANALYTICAL RESULTS QUALIFIERS

Workorder: 13619 ELECTROLUX / 103087305

DEFINITIONS/QUALIFIERS

Disclaimer : The Pennsylvania Department of Environmental Protection (PADEP) has decided to no longer recognize analyses that do not produce data for primary compliance, for NELAP accreditation. The methods affected by this decision are AM20GAx, AM21G, SW846 7199 and AM4.02. The laboratory shall continue to administer the NELAP/TNI standard requirements in the performance of these methods.

MDL	Method Detection Limit. Can be used synonymously with LOD; Limit Of Detection.
PQL	Practical Quanitation Limit. Can be used synonymously with LOQ; Limit Of Quantitation.
ND	Not detected at or above reporting limit.
DF	Dilution Factor.
S	Surrogate.
RPD	Relative Percent Difference.
% Rec	Percent Recovery.
U	Indicates the compound was analyzed for, but not detected at or above the noted concentration.
J	Estimated concentration greater than the set method detection limit (MDL) and less than the set reporting limit (PQL).

Cooler Receipt Form

Client Name: Golder Project: Electrolux Lab Work Order: 13619

A. Shipping/Container Information (circle appropriate response)

Courier: FedEx UPS USPS Client Other:_____ Air bill Present: Yes No

Tracking Number: 771459123476

Custody Seal on Cooler/Box Present: Yes No Seals Intact: Yes No

Cooler/Box Packing Material: Bubble Wrap Absorbent Foam Other:_____

Type of Ice: Wet Blue None Ice Intact: Yes Melted

Cooler Temperature: 4°C Radiation Screened: Yes No Chain of Custody Present: Yes No

Comments:_____

B. Laboratory Assignment/Log-in (check appropriate response)

	YES	NO	N/A	Comment Reference non-Conformanc
Chain of Custody properly filled out	✓			
Chain of Custody relinquished	✓			
Sampler Name & Signature on COC	✓			
Containers intact	✓			
Were samples in separate bags	✓			
Sample container labels match COC Sample name/date and time collected	✓			
Sufficient volume provided	✓			
Microseeps containers used	✓			
Are containers properly preserved for the requested testing? (as labeled)	✓			
If an unknown preservation state, were containers checked? Exception: VOA's coliform			✓	If yes, see pH form.
Was volume for dissolved testing field filtered, as noted on the COC? Was volume received in a preserved container?			✓	

Comments:_____

No additional comments.

Receipt
The samples were received on 12/18/2014 6:30 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.5º C.

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) associated with batch 72459 recovered above the upper control limit for Chloroethane (30.7 %D), Bromoform (39.2 %D),and Trichlorofluoromethane (30.4 %D). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: (CCV 310-72459/3).

Method(s) 8260C: The laboratory control sample (LCS) for batch 72459 recovered outside control limits for the following analytes: 1,2,3-Trichlorobenzene, Bromoform, and Bromomethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260C: The continuing calibration verification (CCV) associated with batch 42670 recovered above the upper control limit for Tichloroethene (29 %D). The LCS associated with this CCV passes using CCV criteria for the affected analytes; therefore, the data have been reported. The following samples are impacted: (CCV 310-72670/6).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD exceeds the control limits

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

General Chemistry

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Surrogate Summary

Client: Golder Associates Inc.
Project/Site: Electrolux - Jefferson, IA

TestAmerica Job ID: 310-46049-1

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments
No additional comments.

Receipt
The samples were received on 3/24/2015 7:00 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.7º C.

GC/MS VOA
Method(s) 8260C: The continuing calibration verification (CCV) associated with batch 81155 recovered above the upper control limit for Carbon tetrachloride (21.8 %D), Vinyl chloride (21 %D), and Trichlorofluoromethane (39 %D). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: (CCV 310-81155/3).

Method(s) 8260C: The laboratory control sample (LCS) for batch 81155 recovered outside control limits for the following analytes: Dichlorodifluoromethane and Trichlorofluoromethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260C: The method blank for batch 81164 contained cis 12-Dichloroethene above the reporting limit (RL). Associated sample was not re-extracted and/or re-analyzed because results were greater than 10X the value found in the method blank.

Method(s) 8260C: The continuing calibration verification (CCV) associated with batch 81164 recovered above the upper control limit for Trichlorofluoromethane(22.3%D). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
*	LCS or LCSD exceeds the control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments
No additional comments.

Receipt
The samples were received on 11/10/2015 5:45 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.1º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Cooler/Sample Receipt and Temperature Log Form

Client Information

Client: Golder Associates

City/State: Manchester NH | Project:

Receipt Information

Date/Time Received: 11/10/15 1745 | Received By: PC

Delivery Type: ☐ UPS ☐ FedEx ☐ FedEx Ground ☐ US Mail ☐ Spee-Dee ☒ TA Courier ☐ TA Field Services ☐ Client Drop-off ☐ Other:_____

Condition of Cooler/Containers

Sample(s) received in Cooler?	☒ Yes ☐ No	*If yes:* Cooler ID:	A-5
Multiple Coolers?	☐ Yes ☒ No	*If yes:* Cooler # _____ of _____	
Cooler Custody Seals Present?	☐ Yes ☒ No	*If yes:* Cooler custody seals intact?	☐ Yes ☐ No
Sample Custody Seals Present?	☐ Yes ☒ No	*If yes:* Sample custody seals intact?	☐ Yes ☐ No
Trip Blank Present?	☐ Yes ☐ No	*If yes:* Which VOA samples are in cooler? ↓	

Temperature Record

Coolant: ☒ Wet ice ☐ Blue ice ☐ Dry ice ☐ Other:_____ ☐ NONE

Temperature Blank? ☒ Yes ☐ No ID & Bottle Type:

NOTE: If yes, use temp blank for measurement. If no, specify sample ID(s) and bottle type used to take measurement.

Thermometer ID:	G	Correction Factor (°C):	+0.1
Uncorrected Temp (°C):	3.0	Corrected Temp (°C):	3.1

Exceptions Noted

1) If temperature exceeds criteria, was sample(s) received same day of sampling? ☐ Yes ☐ No
   a) *If yes:* Is there evidence that the chilling process began? ☐ Yes ☐ No

2) If temperature is <0°C, are there obvious signs that the integrity of sample containers is compromised? (e.g., bulging septa, broken/cracked bottles?) ☐ Yes ☐ No

NOTE: If yes, contact PM before proceeding. If no, proceed with login

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments
No additional comments.

Receipt
The samples were received on 7/1/2016 6:15 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 6.0º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
F2	MS/MSD RPD exceeds control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

APPENDIX J

HORIZONTAL SEEPAGE FLOW VELOCITY CALCULATIONS

Seepage Velocity Calculations - Electrolux Jefferson

OBJECTIVE:

Calculate the flow velocity for the former Electrolux Home Products, Inc. facility in Jefferson, Iowa within the yellow-brown till.

METHOD

Calculate the seepage velocity (V) based on the Darcy equation:

$$V = \frac{Ki}{n_e}$$

ASSUMPTIONS

1. Homogeneous, isotropic aquifer material.
2. 1 cm/s = 2,835 ft/day
3. 1 ft/day = 365 ft/year

CALCULATIONS

Golder calculated a groundwater flow velocity for Jefferson site based on the Darcy equation for the following conditions:

Hydraulic Gradient (i)		Hydraulic Conductivity (K)	
Low i (ft/ft)=	0.003	Low K (cm/sec) =	4.90E-06
Average i (ft/ft)=	0.017	Average K (cm/sec) =	2.62E-05
High i (ft/ft)	0.03	High K (cm/sec) =	1.40E-04

See Figure 8 for low and high hydraulic gradient values

See Table 4 for slug test results - hydraulic conductivity values

K*i	Low K	Average K	High K
Low i	1.47E-08	7.86E-08	4.20E-07
Average i	8.09E-08	4.32E-07	2.31E-06
High i	1.47E-07	7.86E-07	4.20E-06

Assume glacial till has an effective porosity (n_e) of 0.25

Seepage velocity (V)		
Low	5.88E-08	cm/sec
Average	1.73E-06	cm/sec
High	1.68E-05	cm/sec
Low	1.67E-04	ft/day
Average	4.90E-03	ft/day
High	4.76E-02	ft/day
Low	0.061	ft/year
Average	1.8	ft/year
High	17	ft/year

1.0 QUALITY ASSURANCE/QUALITY CONTROL

1.1 Introduction

Golder performed a Quality Assurance/Quality Control (QA/QC) data evaluation review on inorganic and organic laboratory data submitted for 49 soil samples (including 5 field duplicate samples), 23 groundwater samples (including 2 field duplicate samples), and 7 trip blank samples collected at the former Electrolux Home Products, Inc. (Electrolux) facility located in Jefferson, Iowa in May 2012. Sample results are summarized in Tables 8 and 9.

Golder evaluated the precision, accuracy, and completeness of the analytical data.

- Precision is the measure of variability of individual sample measurements. Precision was evaluated through collection and analysis of field duplicate samples and comparing primary soil and groundwater sample results to duplicate sample results. The laboratory also analyzed trip blank samples to evaluate potential impacts during shipping of the samples.
- Accuracy is the degree of agreement for a measurement with an accepted reference or true value and is a measure of the bias in a system. Evaluation of accuracy included an examination of analytical holding times, gas chromatography/mass spectrometry (GC/MS) instrument performance checks, instrument calibrations, method blanks, surrogate spikes, laboratory control spike/spike duplicate (LCS/LCSD) and matrix spike/matrix spike duplicate (MS/MSD) analyses, and internal standards for GC/MS analysis.
- Completeness is the ratio of total number of samples analyzed and validated as acceptable to the number of samples submitted for analysis. Completeness also includes an evaluation of the completeness of the laboratory data package submitted for validation. Golder assessed the completeness of the laboratory data package but did not perform a full data validation evaluation.

1.2 Precision

To evaluate precision, Golder collected field QC samples at a frequency of approximately 10% in accordance with the Work Plan (SOP-6), which equated to five soil duplicate samples and two groundwater duplicate samples. Golder calculated the Relative Percent Difference (RPD), which is defined as the difference between two duplicate samples divided by the mean and expressed as a percentage. Golder considered acceptable RPD limits for field duplicates with analyte concentrations greater than five times the minimum reporting level (MRL) to be less than or equal to 25% for aqueous samples and less than or equal to 50% for soil samples. Golder considered the acceptable RPD limits for field duplicates with analyte concentrations less than five times the MRL to be less than or equal to the MRL. Results of the field duplicate analysis are presented in Table 1 of this appendix.

The five soil field duplicate samples were all within the acceptable RPD limits (< 50%). Groundwater Duplicate 1 met the RPD acceptance limits, however, the Duplicate 2 groundwater sample had six analytes that were above the 30% acceptance limits including 1,1-dichloroethane, 1,2,4-

trimethylbenzene, isopropylbenzene, n-butylbenzene, and sec-butylbenzene. Because the laboratory detected these analytes at low concentrations (typically less than 13 ug/l), the RPD can appear higher than acceptable levels even though there is little difference in the total concentrations (e.g., iso-propylbenzene – 12.8 ug/l and duplicate – 8 ug/l = 46.2 %RPD). Despite these differences, it is Golder's opinion that these data are acceptable for their intended use as they do not alter the Site Conceptual Model.

Golder submitted a trip blank with each cooler containing samples for analysis of volatile organic compounds (VOCs) to screen for shipping and/or bottle related contamination. The laboratory did not detect any analytes at a concentration above the laboratory reporting limits in the trip blanks.

1.3 Accuracy

Laboratory QC included GC/MS instrument performance checks, instrument calibrations, method blanks, surrogate spikes, laboratory control sample/laboratory control sample duplicate (LCS/LCSD) and matrix spike/matrix spike duplicate (MS/MSD) analyses, and internal standards. The laboratory completed the following QC tests:

- Instrument performance checks to check mass resolution and proper identification of target analytes during GC/MS analyses.
- Instrument calibrations to measure system performance throughout the analytical procedure and established the quantitation criteria for the analytes.
- Method blanks to identify compounds which could be introduced during the preparation, extraction, or analysis phases of the method.
- Surrogates, compounds structurally similar to target analytes but generally not found in nature, to demonstrate the percent recovery of the organic method by the laboratory.

The laboratory compared the MS/MSD and LCS/LCSD recoveries to published and laboratory control-charted QC limits to demonstrate acceptable compound recovery. Internal standards were analyzed to ensure the stability of the GC/MS instrument sensitivity and response during every analytical run. Golder reviewed the laboratory analytical data and it is Golder's opinion that the laboratory data accuracy is acceptable for their intended use.

1.4 Completeness

Evaluation of completeness included a review of the chain-of-custody records, a review of laboratory analytical methods and detection limits, a review of project narratives, and a review of laboratory data deliverables for data validation compliance. The data quality objective for this site laboratory data was to achieve 90-100% completeness of the data collected.

1.4.1 Soil

The TestAmerica report, dated May 18, 2012, Lab No. CVE0462, presents the results for 12 soil samples (including two duplicates) analyzed for one or more of the following parameters: VOCs, TEH, metals, and oil and grease collected on May 2, 2012. According to the case narrative, TestAmerica received the samples in good condition, at a temperature of 3.1 degrees Celsius (^{0}C), in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis. TestAmerica reported "B" (compound was found in the blank and sample) and "J" (result is less than the reporting limit (RL)) but greater than or equal to the method detection limit (MDL) and the concentration is an approximate value) flags for the oil and grease analyses. TestAmerica indicated that the analytical results do not appear to be affected by the laboratory qualifications and the data are valid.

The TestAmerica report, dated May 21, 2012, Lab No. CVE0494, presents the results for 37 soil samples (including three duplicates) analyzed for one or more of the following parameters: VOCs, TEH, metals, oil and grease, TCLP VOCs, TCLP SVOCs, TCLP herbicides, TCLP pesticides, cyanide, sulfide, pH, PCBs, and flashpoint collected on May 3rd and 4th, 2012. According to the case narrative, TestAmerica received the samples in good condition, at a temperature of 2.9 and 3.1 ^{0}C (two coolers), in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis. TestAmerica reported "B" (compound was found in the blank and sample) and "J" (result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value) flags for the oil and grease analyses. In addition, the oil and grease matrix spike duplicate (MSD) recovery for sample 500-46172-8 in batch 149727 was outside control limits. The precision RPD was also outside control limits. The associated LCS recovery met acceptance criteria. Therefore, TestAmerica believes that the analytical results do not appear to be affected by the laboratory qualifications and the data are valid.

TestAmerica did not meet the reporting limits for EPA's Regional Screening Levels (RSLs) for arsenic (1.6 mg/kg). The reporting limits for soil samples analyzed for arsenic ranged from 4.32 mg/kg to 14.6 mg/kg, which are below the Iowa Department of Natural Resources' (IDNR's) Statewide Screening concentration of 17 mg/kg. Although Golder cannot evaluate whether non-detect concentrations of arsenic meet EPA's RSLs, the data are suitable to screen Site soils against IDNR's Statewide Screening Standard.

TestAmerica did not meet the RSL reporting limit for vinyl chloride (1,700 ug/kg) in six soil samples including SB-03 (MIP-30) 02-04, SB-03 (MIP-30) 06-08, SB-06 (MIP-27) 6 to 8, SB-08 (MIP-25) 10 to 12, SB-13 (MIP-32) 1 to 3, and SB-16 (MIP-05) 12 to 14. All six of these soil samples were within 200 ug/kg of meeting the vinyl chloride RSL. TestAmerica did not detect vinyl chloride at a concentration above the vinyl chloride RSL in the 34 other soil samples collected from the Site. In addition, Golder collected a duplicate soil samples (Duplicate-01) from soil sample SB-06 (MIP-27) 6 to 8. TestAmerica met the vinyl chloride RSL reporting limit for the duplicate sample and vinyl chloride was not detected at a

concentration above the laboratory reporting limit. It is Golder's opinion that the elevated vinyl chloride reporting limits in the six soil samples does not affect the Site Conceptual Model.

1.4.2 Groundwater

The TestAmerica report, dated June 4, 2012, Lab No. CVE1789, presents the results for 2 groundwater samples analyzed for VOCs and TEH collected on May 23 and 25, 2012. According to the case narrative, TestAmerica received the samples in good condition, at a temperature of 0.1 ^{0}C, in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis. The laboratory analysis QA/QC certification form indicates the following:

- TestAmerica reported a "CIN" flag, which indicates that the percent relative standard deviation (% RSD) for a particular compound was above 15% and the average % RSD for all compounds in the calibration met the 15% criteria specified in EPA methods 8260B/8270C, for the following analytes: bromoform, bromomethane, 1,1-DCA, 2-2-Dichloropropane, and trans-1,3-dichloropropene.
- TestAmerica also reported a "C" flag for 1,1,2,2,-tetrachlorethane indicating that the "calibration verification recovery was above the method control limit for this analyte. Analyte not detected, data not impacted." Golder did not report 1,1,2,2,-tetrachlorethane as a detection in Table 9.

The TestAmerica report, dated June 6, 2012, Lab No. CVE1748, presents the results for five groundwater samples analyzed for VOCs and TEH collected on May 22nd and 24th, 2012. According to the case narrative, TestAmerica received the samples in good condition, at a temperature of 1.6 ^{0}C, in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis. The laboratory analysis QA/QC certification form indicates the following:

- TestAmerica reported a "CIN" flag for the same compounds listed in preceding lab report (TestAmerica Lab No. CVE1789) for the VOC analyses. However, TestAmerica detected 1,1-DCA at a concentration above the laboratory reporting limit for groundwater samples collected from MW-27 (CVE1748-02) and MW-29 (CVE1748-04) that had a "CIN" flag. TestAmerica considers the laboratory results to be valid.
- TestAmerica also reported a "C" flag for 1,1,2,2,-tetrachlorethane indicating that the "calibration verification recovery was above the method control limit for this analyte. Analyte not detected, data not impacted." Golder did not report 1,1,2,2,-tetrachlorethane as a detection in Table 9.

The TestAmerica report, dated June 6, 2012, Lab No. CVE1585, presents the results for 16 groundwater samples (including 2 duplicate samples) analyzed for VOCs and TEH collected on May 21st, 22nd and 23rd, and 25th 2012. According to the case narrative, with the exception of one sample, TestAmerica received the samples in good condition, at a temperature of 1.6 ^{0}C and 0.4 ^{0}C (two coolers), in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis. TestAmerica noted that they received a broken 1-liter amber bottle (TEH analysis)

containing a groundwater sample for MW-25S. Golder re-sampled groundwater from MW-25S on May 25, 2012. The laboratory analysis QA/QC certification form indicates the following:

- CVE1585-01: TestAmerica reported a "CIN" specific flag for EPA methods 8260B/8270C for the following analytes: bromomethane, 1,1-DCE, 1,1-dichloropropene, isopropylbenzene, n-propylbenzene, and 1,1,1-TCA. Test America detected 1,1-DCE above the laboratory reporting limit. TestAmerica also reported "B and B1" flags for cis-1,2-DCE, which indicates that the "analyte was detected in the associated Method Blank, and that the analyte concentration in the sample is greater than 10x the concentration found in the method blank, respectively, and should not have an impact on the data."
- CVE1585-02, 08, 09, 11, 13, 14, 15: TestAmerica reported a "CIN" specific flag for EPA methods 8260B/8270C for the following analytes: bromomethane, 1,1-DCE, 1,1-dichloropropene, isopropylbenzene, n-propylbenzene, and 1,1,1-TCA. Golder considers this data to be valid.
- CVE1585-03, 04: TestAmerica reported a "CIN" specific flag for EPA methods 8260B/8270C for the following analytes: bromomethane, 1,1-DCE, 1,1-dichloropropene, isopropylbenzene, n-propylbenzene, and 1,1,1-TCA. Test America detected isopropylbenzene and n-propylbenzene above the laboratory reporting limits. Golder considers this data to be valid.
- CVE1585-05: TestAmerica reported a "CIN" specific flag for EPA methods 8260B/8270C for the following analytes: bromomethane, 1,1-DCE, 1,1-dichloropropene, isopropylbenzene, n-propylbenzene, 1,1,1-TCA, and 1,1,2-trichloroethane. In addition, the matrix spike (MS) and/or matrix spike duplicate (MSD) for TCE were outside control limits. Golder considers this data to be valid.
- CVE1585-06, 07, 12, 16: TestAmerica reported a "CIN" specific for EPA methods 8260B/8270C for the following analytes: bromomethane, 1,1-DCE, 1,1-dichloropropene, isopropylbenzene, n-propylbenzene, 1,1,1-TCA, and 1,1,2-trichloroethane. Golder considers this data to be valid.
- CVE1585-09: TestAmerica reported "B and B1" flags for cis-1,2-DCE, which indicates that the analyte was detected in the associated Method Blank, and that the analyte concentration in the sample is greater than 10x the concentration found in the method blank, respectively. The analytical results for cis-1,2-DCE for this sample were within 4.5 %RPD of the duplicate groundwater sample (Groundwater Duplicate 1). Therefore, Golder considers this analytical data to be valid.
- CVE1585-10: TestAmerica reported a "CIN" flag specific for EPA methods 8260B/8270C for the following analytes: bromomethane, 1,1-DCE, 1,1-dichloropropene, isopropylbenzene, n-propylbenzene, and 1,1,1-TCA. In addition, the MS and/or MSD for acetone and vinyl chloride were outside control limits. Golder considers this data to be valid.
- CVE1585-14: TestAmerica reported "B and B1" flags for cis-1,2-DCE, which indicates that the analyte was detected in the associated Method Blank, and that the analyte concentration in the sample is greater than 10x the concentration found in the method blank, respectively. This sample was a duplicate (Groundwater Duplicate 1) groundwater sample. The analytical results for cis-1,2-DCE were within 4.5 %RPD of the main groundwater sample (MW-25D). Therefore, Golder considers this analytical data to be valid.
- CVE1585-15: TestAmerica reported "C and L" flags for carbon disulfide, which indicates that Calibration Verification recovery was above the method control limit for this analyte (analyte not detected, data not impacted) and that the Laboratory Control Sample and/or

Laboratory Control Sample Duplicate recovery was above the control limits (analyte not detected, data not impacted). Golder considers this data to be valid.

Golder collected a total of 46 VOC soil samples (63 analytes per analysis), 36 TEH soil samples, 36 oil and grease soil samples, 4 SVOC soil samples, 17 metals soil samples (8 analytes per analysis), and 4 PCB soil samples during this assessment. In addition, Golder collected 20 groundwater samples for analysis of VOCs (63 analytes per analysis) and TEH. It is Golder's opinion based on our review of the laboratory data and the QA/QC data, that an acceptable level of data completeness was achieved for the intended purpose.

1.0 QUALITY ASSURANCE/QUALITY CONTROL

1.1 Introduction

Golder performed a Quality Assurance/Quality Control (QA/QC) data evaluation review on inorganic and organic laboratory data submitted for 6 soil samples, 72 groundwater samples (including 8 field duplicate samples), and 5 trip blank samples collected at the former Electrolux Home Products, Inc. (Electrolux) facility located in Jefferson, Iowa between November 2012 and March 2013. Sample results are summarized in Tables 9, 10 and 11.

Golder evaluated the precision, accuracy, and completeness of the analytical data.

- Precision is the measure of variability of individual sample measurements. Precision was evaluated through collection and analysis of field duplicate samples and A comparison of primary sample results to duplicate sample results. The laboratory also analyzed trip blank samples to evaluate potential contamination during shipping of the samples.
- Accuracy is the degree of agreement for a measurement with an accepted reference or true value and is a measure of the bias in a system. Evaluation of accuracy included an examination of analytical holding times, gas chromatography/mass spectrometry (GC/MS) instrument performance checks, instrument calibrations, method blanks, surrogate spikes, laboratory control spike/spike duplicate (LCS/LCSD) and matrix spike/matrix spike duplicate (MS/MSD) analyses, and internal standards for GC/MS analysis.
- Completeness is the ratio of total number of samples analyzed and validated as acceptable to the number of samples submitted for analysis. Completeness also includes an evaluation of the completeness of the laboratory data package submitted for validation. Golder assessed the completeness of the laboratory data package but did not perform a full data validation evaluation.

1.2 Precision

To evaluate precision, Golder collected field QC samples at a frequency of approximately 10% in accordance with the Work Plan (SOP-6), which equated to seven groundwater duplicate samples. Golder calculated the Relative Percent Difference (RPD), which is defined as the difference between two duplicate samples divided by the mean and expressed as a percentage. Golder considered acceptable RPD limits for field duplicates with analyte concentrations greater than five times the minimum reporting level (MRL) to be less than or equal to 30% for aqueous samples. Golder considered the acceptable RPD limits for field duplicates with analyte concentrations less than five times the MRL to be less than or equal to the MRL. Results of the field duplicate analysis are presented in Table 1 of this appendix. All the groundwater duplicates were within the RPD acceptable limits of 30%.

Golder submitted a trip blank with each cooler containing samples for analysis of volatile organic compounds (VOCs) to screen for shipping and/or bottle related contamination. The laboratory did not detect any analytes at a concentration above the laboratory reporting limits in the trip blanks.

1.3 Accuracy

Laboratory QC included GC/MS instrument performance checks, instrument calibrations, method blanks, surrogate spikes, laboratory control sample/laboratory control sample duplicate (LCS/LCSD) and matrix spike/matrix spike duplicate (MS/MSD) analyses, and internal standards. The laboratory completed the following QC tests:

- Instrument performance checks to check mass resolution and proper identification of target analytes during GC/MS analyses.
- Instrument calibrations to measure system performance throughout the analytical procedure and established the quantitation criteria for the analytes.
- Method blanks to identify compounds which could be introduced during the preparation, extraction, or analysis phases of the method.
- Surrogates, compounds structurally similar to target analytes but generally not found in nature, to demonstrate the percent recovery of the organic method by the laboratory.

The laboratory compared the MS/MSD and LCS/LCSD recoveries to published and laboratory control-charted QC limits to demonstrate acceptable compound recovery. Internal standards were analyzed to ensure the stability of the GC/MS instrument sensitivity and response during every analytical run. Golder reviewed the laboratory analytical data and it is Golder's opinion that the laboratory data accuracy is acceptable for their intended use.

1.4 Completeness

Evaluation of completeness included a review of the chain-of-custody records, a review of laboratory analytical methods and detection limits, a review of project narratives, and a review of laboratory data deliverables for data validation compliance. The data quality objective for this site laboratory data was to achieve 90-100% completeness of the data collected.

1.4.1 Soil

The TestAmerica report, dated November 26, 2012, Lab No. CVK1116, presents the results for six soil samples collected between November 12-15, 2012 and analyzed for VOCs. TestAmerica received the samples in good condition, at a temperature of 0.1 degrees Celsius (^{0}C), in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis. The laboratory analysis QA/QC certification form indicates the following:

- All six soil samples had "CIN" flags for acetone and methylene chloride and an "ICV" flag for chloroethane. The "CIN" flag indicates that the % Relative Standard Deviation (RSD) for this compound was above 15%. The average % RSD for all compounds in the calibration met the 15% criteria specified in EPA methods 8260B/8270C. Therefore, the data is considered valid. The Initial Calibration Verification (ICV) flag indicates that ICV recovery was above the control limits. However, the analyte was not detected, therefore the data was not impacted.

1.4.2 Groundwater

The TestAmerica report dated December 28, 2012, Lab No. CVL0713, presents the results for 14 groundwater samples, including 4 duplicates, analyzed for VOCs and TEH collected on December 10 and 11, 2012. According to the case narrative, TestAmerica received the samples in good condition, at a temperature of 1.4°C, in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis. The laboratory analysis QA/QC certification form indicates the following:

- TestAmerica reported a "C9" flag for carbon disulfide in sample Duplicate-4, which indicates that the calibrated verification recovery was outside the method control limits for this analyte. The lab control sample for this analyte met the instrument continuing calibration verification (CCV) acceptance criteria, and was used to validate the batch.
- TestAmerica reported a "Q" flag for several detections of motor oil, diesel and/or gasoline in samples MW-47D, Duplicate-1, MW-28, Duplicate-2, Duplicate-3, Duplicate-4, and MW-23, indicating that it was a poor chromatographic match to the standard.

The TestAmerica report dated December 28, 2012, Lab No. CVL0764, presents the results for seventeen groundwater samples analyzed for VOCs, TEH, EPH and VPH collected on December 12, 2012. According to the case narrative, TestAmerica received the samples in good condition, at a temperature of 0.8°C, in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis. The laboratory analysis QA/QC certification form indicates the following:

- TestAmerica reported a "C9" flag for carbon disulfide for all the samples in the report, including a few detected results. This flag indicates that the calibrated verification recovery was outside the method control limits for this analyte. The lab control sample for this analyte met CCV acceptance criteria, and was used to validate the batch.
- TestAmerica also reported a "Q" flag for several detections of motor oil, diesel and/or gasoline in samples MW-55S,MW-9,MW-39, MW-55D, MW-44, MW-54, MW-36S, MW-35, MW-21, MW-52, MW-51 indicating that it was a poor chromatographic match to the standard.

The TestAmerica report, dated January 8, 2013, Lab No. CVL0908, presents the results for 23 groundwater samples analyzed for VOCs and TEH collected on December 10 and 13, 2012. According to the case narrative, TestAmerica received the samples in good condition, at a temperature of 1.1 ^{0}C and 1.0 ^{0}C (two coolers), in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis. The laboratory analysis QA/QC certification form indicates the following:

- TestAmerica reported a "C9" flag for carbon disulfide, 1,1-dichloroethene, trans-1,2-dichlorethene for samples MW-36D, MW-42, MW-43S, MW-43I, MW-43D, MW-41, MW-48, MW-34, MW-40, MW-49, MW-32, MW-18, MW-47S, MW-27. This flag indicates that the calibrated verification recovery was outside the method control limits for these analytes. The lab control sample for these analytes met CCV acceptance criteria, and was used to validate the batch.

- TestAmerica reported a “C” flag for 1,1-dichloropropane in MW-36D, MW-42, MW-43S, MW- 43I,MW-43D, MW-41, MW-48, MW-34, MW-40, MW-49, MW-32, MW-18, MW-47S, and MW-27. The “C” flag indicates that the calibration verification recovery was above the method control limit for this analyte. Since the analyte was not detected, the data was not impacted.

- TestAmerica reported a “B” and/or “Q” flags for motor oil, diesel, and/or gasoline in MW-36D, MW-22, MW-42, MW-34, MW-40, MW-47S, and MW-25S. The “B” flag indicates that the analyte was detected in the associate method blank and the “Q” flag indicates a poor chromatographic match to the standard. Both flags indicate that the reported concentrations are estimated values.

- Test America reported a “Z6” flag indicating that a surrogate recovery was outside of the established control limits for samples MW-47S, MW-12, MW-41.

The TestAmerica report, dated April 5, 2013, Lab No. 310-4969-1, presents the results for 10 groundwater samples analyzed for VOCs and TEH collected on March 26 and 27, 2013. According to the case narrative, TestAmerica received the samples in good condition, at a temperature of 1.6 ^{0}C and 4.6 ^{0}C (two coolers), in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis.

It is Golder’s opinion based on our review of the laboratory data and the QA/QC data, that an acceptable level of data completeness was achieved for the intended purpose.

1.0 QUALITY ASSURANCE/QUALITY CONTROL

1.1 Introduction

Golder performed a Quality Assurance/Quality Control (QA/QC) data evaluation review on inorganic and organic laboratory data submitted for 18 groundwater samples (including 2 field duplicate samples), and 3 trip blank samples collected in October 2013 from the former Electrolux Home Products, Inc. (Electrolux) facility located in Jefferson, Iowa. Sample results are summarized in Tables 5 and 6.

Golder evaluated the precision, accuracy, and completeness of the analytical data.

- Precision is the measure of variability of individual sample measurements. Precision was evaluated through collection and analysis of field duplicate samples and a comparison of primary sample results to duplicate sample results. The laboratory also analyzed trip blank samples to evaluate potential contamination during shipping of the samples.
- Accuracy is the degree of agreement for a measurement with an accepted reference or true value and is a measure of the bias in a system. Evaluation of accuracy included an examination of analytical holding times, gas chromatography/mass spectrometry (GC/MS) instrument performance checks, instrument calibrations, method blanks, surrogate spikes, laboratory control spike/spike duplicate (LCS/LCSD) and matrix spike/matrix spike duplicate (MS/MSD) analyses, and internal standards for GC/MS analysis.
- Completeness is the ratio of total number of samples analyzed and validated as acceptable to the number of samples submitted for analysis. Completeness also includes an evaluation of the completeness of the laboratory data package submitted for validation. Golder assessed the completeness of the laboratory data package but did not perform a full data validation evaluation.

1.2 Precision

To evaluate precision, Golder collected field QC samples at a frequency of approximately 10% in accordance with the Work Plan (SOP-6), which equated to two groundwater duplicate samples. Golder calculated the Relative Percent Difference (RPD), which is defined as the difference between two duplicate samples divided by the mean and expressed as a percentage. For field duplicates with analyte concentrations greater than five times the minimum reporting level (MRL), Golder considered acceptable RPD limits to be less than or equal to 30% for aqueous samples. For field duplicates with analyte concentrations less than or equal to five times the MRL, Golder considered the acceptable RPD limits to be less than or equal to the value of the MRL. Results of the field duplicate analysis are presented in Table 1 of this appendix. All the groundwater duplicates were within the RPD acceptable limits of 30%, except for the methane analysis of MW-63 and Dup-02. The concentration difference between the samples was 0.9 ug/l.

Golder submitted a trip blank with each cooler containing samples for analysis of volatile organic compounds (VOCs) to screen for shipping and/or bottle related contamination. The laboratory did not detect any analytes at a concentration above the laboratory reporting limits in the trip blanks, except for

bromomethane, which was detected in one trip blank at a concentration of 4.17 ug/L. Bromomethane was detected at similar concentrations in two samples (MW-28 and MW-29) in this cooler. It is Golder's opinion that these detections are indicative of laboratory contamination since bromomethane was detected in the trip blank and that bromomethane is not a site-related compound.

1.3 Accuracy

Laboratory QC included GC/MS instrument performance checks, instrument calibrations, method blanks, surrogate spikes, laboratory control sample/laboratory control sample duplicate (LCS/LCSD) and matrix spike/matrix spike duplicate (MS/MSD) analyses, and internal standards. The laboratory completed the following QC tests:

- Instrument performance checks to check mass resolution and proper identification of target analytes during GC/MS analyses.
- Instrument calibrations to measure system performance throughout the analytical procedure and established the quantitation criteria for the analytes.
- Method blanks to identify compounds which could be introduced during the preparation, extraction, or analysis phases of the method.
- Surrogates, compounds structurally similar to target analytes but generally not found in nature, to demonstrate the percent recovery of the organic method by the laboratory.

The laboratory compared the MS/MSD and LCS/LCSD recoveries to published and laboratory control-charted QC limits to demonstrate acceptable compound recovery. Internal standards were analyzed to ensure the stability of the GC/MS instrument sensitivity and response during every analytical run. Golder reviewed the laboratory analytical QC data and it is Golder's opinion that the laboratory data accuracy is acceptable for their intended use.

1.4 Completeness

Evaluation of completeness included a review of the chain-of-custody records, a review of laboratory analytical methods and detection limits, a review of project narratives, and a review of laboratory data deliverables for data validation compliance. The data quality objective for this site laboratory data was to achieve 90-100% completeness of the data collected.

1.4.1 Groundwater

The TestAmerica report dated October 24, 2013, lab No. 310-17673, presents the results for seven groundwater samples, analyzed for VOCs, nitrate, nitrite, sulfate, total organic carbon (TOC), iron and manganese collected on October 10 and 11, 2013. According to the case narrative, TestAmerica received the samples in good condition, at a temperature of 1.3 ^{0}C, in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis.

The TestAmerica report dated November 14, 2013, Lab No. 310-17594, presents the results for six groundwater samples analyzed for VOCs, Nitrate, Nitrite, Sulfate, TOC, Iron and Manganese collected on October 10, 2013. According to the case narrative, TestAmerica received the samples in good condition, at a temperature of 0.8 ^{0}C and 1.3 ^{0}C (two coolers), in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis. The laboratory analysis QA/QC certification form indicates the following:

- Method(s) 8260C: The method blank for preparation batch 28348 contained trichloroethene above the reporting limit (RL). The associated sample (MW-29) contained detects for this analyte at concentrations greater than 10X the value found in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

The TestAmerica report, dated October 24, 2013, Lab No. 310-17470, presents the results for seven groundwater samples analyzed for VOCs, nitrate, nitrite, sulfate, TOC, iron and manganese collected on October 9, 2013. According to the case narrative, TestAmerica received the samples in good condition, at a temperature of 0.1 ^{0}C and 0.8 ^{0}C (two coolers), in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis.

The Microseeps report, dated October 21, 2013, Workorder 10340, presents the results for 13 groundwater samples analyzed for methane, ethane and ethene collected on October 9 and 10, 2013. Microseeps received the samples in good condition, at a temperature of 1 ^{0}C, in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis.

The Microseeps report, dated October 24, 2013, Workorder 10364, presents the results for seven groundwater samples analyzed for Methane, Ethane and Ethene collected on October 11, 2013. According to the case narrative, Microseeps received the samples in good condition, at a temperature of 3 ^{0}C, in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis.

It is Golder's opinion based on our review of the laboratory data and the QA/QC data, that an acceptable level of data completeness was achieved for the intended purpose.

1.0 QUALITY ASSURANCE/QUALITY CONTROL

1.1 Introduction

Golder performed a Quality Assurance/Quality Control (QA/QC) data evaluation review on inorganic and organic laboratory data submitted for 84 groundwater samples (including 10 field duplicate samples), and 16 trip blank samples collected between April 2014 and July 2016 from the former Electrolux Home Products, Inc. (Electrolux) facility located in Jefferson, Iowa. Sample results are summarized in Tables 5 and 7.

Golder evaluated the precision, accuracy, and completeness of the analytical data.

- Precision is the measure of variability of individual sample measurements. Precision was evaluated through collection and analysis of field duplicate samples and a comparison of primary sample results to duplicate sample results. The laboratory also analyzed trip blank samples to evaluate potential contamination during shipping of the samples.
- Accuracy is the degree of agreement for a measurement with an accepted reference or true value and is a measure of the bias in a system. Evaluation of accuracy included an examination of analytical holding times, gas chromatography/mass spectrometry (GC/MS) instrument performance checks, instrument calibrations, method blanks, surrogate spikes, laboratory control spike/spike duplicate (LCS/LCSD) and matrix spike/matrix spike duplicate (MS/MSD) analyses, and internal standards for GC/MS analysis.
- Completeness is the ratio of total number of samples analyzed and validated as acceptable to the number of samples submitted for analysis. Completeness also includes an evaluation of the completeness of the laboratory data package submitted for validation. Golder assessed the completeness of the laboratory data package but did not perform a full data validation evaluation.

1.2 Precision

To evaluate precision, Golder collected field duplicate samples at a frequency of not less than 10% of the total number of primary samples collected in accordance with SOP-2. Golder calculated the relative percent difference (RPD), which is defined as the difference between two duplicate samples divided by the mean and expressed as a percentage. For field duplicates with analyte concentrations greater than five times the minimum reporting level (MRL), Golder considered acceptable RPD criteria to be less than or equal to 30% for aqueous samples. For field duplicates with analyte concentrations less than or equal to five times the MRL, Golder considered the acceptable precision if the difference in values was less than or equal to the value of the MRL. Results of the field duplicate analysis are presented in Table 1 of this appendix. Based on the RPD analysis, the overall laboratory precision is acceptable for its intended purposes. One duplicate sample from July 2014 did not meet the RPD criteria. Golder attributes this to a field sample collection issue rather than lab precision. Golder has excluded the field duplicate lab results since they are much lower than other samples from this location. The other duplicate sample from July

2014 was within the all the RPD acceptance criteria except for one analyte. All RPD acceptance criteria were met in the duplicate samples from October and December 2014, March 2015, October 2015 and July 2016.

Golder submitted a trip blank with each cooler containing samples for analysis of volatile organic compounds (VOCs) to screen for shipping and/or bottle related contamination. The laboratory did not detect any analytes at a concentration above the laboratory reporting limits in the trip blanks from 2014 to 2016.

1.3 Accuracy

Laboratory QC included GC/MS instrument performance checks, instrument calibrations, method blanks, surrogate spikes, laboratory control sample/laboratory control sample duplicate (LCS/LCSD) and matrix spike/matrix spike duplicate (MS/MSD) analyses, and internal standards. The laboratory completed the following QC tests:

- Instrument performance checks to check mass resolution and proper identification of target analytes during GC/MS analyses.
- Instrument calibrations to measure system performance throughout the analytical procedure and established the quantitation criteria for the analytes.
- Method blanks to identify compounds which could be introduced during the preparation, extraction, or analysis phases of the method.
- Surrogates, compounds structurally similar to target analytes but generally not found in nature, to demonstrate the percent recovery of the organic method by the laboratory.

The laboratory compared the MS/MSD and LCS/LCSD recoveries to published and laboratory control-charted QC limits to demonstrate acceptable compound recovery. Internal standards were analyzed to ensure the stability of the GC/MS instrument sensitivity and response during every analytical run. Golder reviewed the laboratory analytical QC data and it is Golder's opinion that the laboratory data accuracy is acceptable for their intended use.

1.4 Completeness

Evaluation of completeness included a review of the chain-of-custody records, a review of laboratory analytical methods and detection limits, a review of project narratives, and a review of laboratory data deliverables for data validation compliance. The data quality objective for this site laboratory data was to achieve 90-100% completeness of the data collected.

1.4.1 Groundwater Laboratory Report QC Summary – April 2014 Sampling Event

The Microseeps report, dated May 8, 2014, workorder 12016, presents the results for 23 groundwater samples collected between April 22-25, 2014 and analyzed for methane, ethane and ethene. Microseeps received the samples in good condition, at a temperature of 2^0C, in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis.

The TestAmerica report dated May 2, 2014, lab No. 310-29158, presents the results for three groundwater samples collected on April 22, 2014 and analyzed for VOCs, nitrate, nitrite, sulfate, chloride, total organic carbon (TOC), iron and manganese. According to the case narrative, TestAmerica received the samples in good condition, at a temperature of 0.1 ^{0}C, in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis.

The TestAmerica report dated May 6, 2014, Lab No. 310-29313, presents the results for five groundwater samples collected on April 23, 2013 and analyzed for VOCs, nitrate, nitrite, sulfate, chloride, total organic carbon (TOC), iron and manganese. According to the case narrative, TestAmerica received the samples in good condition, at a temperature of 3.4 ^{0}C, in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis.

The TestAmerica report, dated May 6, 2014, Lab No. 310-29420, presents the results for ten groundwater samples collected on April 24, 2014 and analyzed for VOCs, nitrate, nitrite, sulfate, chloride, TOC, iron and manganese. According to the case narrative, TestAmerica received the samples in good condition, at a temperature of 0.0 ^{0}C, in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis.

The TestAmerica report, dated May 6, 2014, Lab No. 310-29499, presents the results for five groundwater samples collected on April 25, 2014 and analyzed for VOCs, nitrate, nitrite, sulfate, chloride, TOC, iron and manganese. TestAmerica received the samples in good condition, at a temperature of 0.5 ^{0}C, in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis.

1.4.2 Groundwater Laboratory Report QC Summary – July 2014 Sampling Event

The Microseeps report, dated July 31, 2014, work order 12784, presents the results for 23 groundwater samples collected between July 15-18, 2014 and analyzed for methane, ethane and ethene. Microseeps received the samples in good condition, in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis.

The TestAmerica report, dated July 24, 2014, work order 310-34864, presents the results for two groundwater samples collected on July 15, 2014 and analyzed for VOCs, nitrate, nitrite, sulfate, chloride,

TOC, iron and manganese. According to the case narrative, TestAmerica received the samples in good condition, at a temperature of 0.9 ^{0}C, in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis.

The TestAmerica report, dated July 24, 2014, Lab No. 310-35011, presents the results for seven groundwater samples collected on July 16, 2014 and analyzed for VOCs, nitrate, nitrite, sulfate, chloride, TOC, iron and manganese. According to the case narrative, TestAmerica received the samples in good condition, at a temperature of 0.6 ^{0}C, in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis.

The TestAmerica report, dated July 31, 2014, Lab No. 310-35091, presents the results for nine groundwater samples collected on July 17, 2014 and analyzed for VOCs, nitrate, nitrite, sulfate, chloride, TOC, iron and manganese. According to the case narrative, TestAmerica received the samples in good condition, at a temperature of 0.0 ^{0}C and 1.6 ^{0}C (two coolers), in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis.

The TestAmerica report, dated July 31, 2014, Lab No. 310-35191, presents the results for five groundwater samples collected on July 18, 2014 and analyzed for VOCs, nitrate, nitrite, sulfate, chloride, TOC, iron and manganese. According to the case narrative, TestAmerica received the samples in good condition, at a temperature of 0.1 ^{0}C, in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis.

1.4.3 Groundwater Laboratory Report QC Summary – October 2014 Sampling Event

The Microseeps report, dated October 24, 2014, work order 13619, presents the results for 23 groundwater samples collected between October 7 -10, 2014 and analyzed for methane, ethane and ethene. Microseeps received the samples in good condition, in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis.

The TestAmerica report, dated October 20, 2014, Lab No. 310-40818, presents the results for three groundwater samples analyzed for VOCs, nitrate, nitrite, sulfate, chloride, TOC, iron and manganese collected on October 7, 2014. According to the case narrative, TestAmerica received the samples in good condition, at a temperature of -0.2 ^{0}C, in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis.

The TestAmerica report, dated October 21, 2014, Lab No. 310-40985, presents the results for four groundwater samples analyzed for VOCs, nitrate, nitrite, sulfate, chloride, TOC, iron and manganese collected on October 8, 2014. According to the case narrative, TestAmerica received the samples in good

condition, at a temperature of 0.6 ^{0}C, in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis.

The TestAmerica report, dated October 22, 2014, Lab No. 310-41134, presents the results for eight groundwater samples collected on October 9, 2014 and analyzed for VOCs, nitrate, nitrite, sulfate, chloride, TOC, iron and manganese. According to the case narrative, TestAmerica received the samples in good condition, at a temperature of -0.5 ^{0}C and 0.3 ^{0}C (two coolers), in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis.

The TestAmerica report, dated October 24, 2014, Lab No. 310-41248, presents the results for eight groundwater samples collected on October 10, 2014 and analyzed for VOCs, nitrate, nitrite, sulfate, chloride, TOC, iron and manganese. According to the case narrative, TestAmerica received the samples in good condition, at a temperature of 0.2 ^{0}C and 0.3 ^{0}C (two coolers), in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis.

1.4.4 Groundwater Laboratory Report QC Summary – December 2014 – July 2016 Sampling Events

The TestAmerica report, dated December 31, 2014, Lab No. 310-46049, presents the results for three groundwater samples collected on December 18, 2014 analyzed for VOCs sulfate, chloride, calcium, iron, magnesium, manganese, potassium sodium, TOC, alkalinity, nitrate and nitrite. According to the case narrative, TestAmerica received the samples in good condition, at a temperature of 2.5 ^{0}C, in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis

The TestAmerica report, dated April 7, 2015, Lab No. 310-51636, presents the results for three groundwater samples collected on March 24, 2015 and analyzed for VOCs, sulfate, chloride, calcium, iron, magnesium, manganese, potassium sodium, TOC, alkalinity, nitrate and nitrite. According to the case narrative, TestAmerica received the samples in good condition, at a temperature of and 2.7 ^{0}C, in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis except for method blank contamination of cis-1,2-DCE above the reporting limit. The detected cis-1,2-DCE sample results are more than 10x the reporting limit, so the result is acceptable for its intended use.

The TestAmerica report, dated November 19, 2015, Lab No. 310-68678, presents the results for three groundwater samples analyzed for VOCs and collected on November 9, 2015. According to the case narrative, TestAmerica received the samples in good condition, at a temperature of 3.1 ^{0}C in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis.

The TestAmerica report, dated July 7, 2016, Lab No. 310-84079, presents the results for four groundwater samples collected on July 1, 2016 and analyzed for VOCs. According to the case narrative, TestAmerica

received the samples in good condition, at a temperature of 6.0 ^{0}C in accordance with the chain of custody, and did not encounter significant deviations during the extraction and analysis.

2.0 SUMMARY

It is Golder's opinion based on our review of the laboratory data and the RPD analysis, that an acceptable level of data precision, accuracy and completeness was achieved for the groundwater laboratory reports between April 2014 and July 2016.

Golder Associates

At Golder Associates we strive to be the most respected global group of companies specializing in ground engineering and environmental services. Employee owned since our formation in 1960, we have created a unique culture with pride in ownership, resulting in long-term organizational stability. Golder professionals take the time to build an understanding of client needs and of the specific environments in which they operate. We continue to expand our technical capabilities and have experienced steady growth with employees now operating from offices located throughout Africa, Asia, Australasia, Europe, North America and South America.
