Test ID No.: 16020401

Dear Mr. LaBar:

Enclosed please find the Toxicity Test Report containing results of a set of 7-Day Chronic Toxicity Tests using *Mysidopsis bahia* and *Menidia beryllina* performed on the LOOP, LLC 004 Brine sample. If you have any questions concerning this toxicity testing report or if I can be of any further assistance to you, please call me at (225) 755-1011 x 1100.

Sincerely,
CK Associates

SUMMARY AND CONCLUSIONS

Permittee:	LOOP, LLC P.O. Box 7250 Metairie, Louisiana 70010-7250	Laboratory:	CK Associates 17170 Perkins Road Baton Rouge, Louisiana 70810 LELAP Certification #02080

Method(s): *Mysidopsis bahia* Survival and Growth Toxicity Test, EPA 821-R-02-014, Method 1007.0

Menidia beryllina Larval Survival and Growth Toxicity Test, EPA 821-R-02-014, Method 1006.0

Test Sample:	Outfall 004 - Brine	Critical Dilution:	7.63%
Test ID No.:	16020401	Dilution Water:	Synthetic Laboratory Water
Concentrations:	3.22, 4.29, 5.72, 7.63, and 10.17%		
Sample Dates:	February 3, 2016		
Test Initiation Date:	February 4, 2016		
Purpose:	Investigative		

Test Acceptance Criteria

Performance criteria for *M. bahia* survival, growth and variability were met.

Performance criteria for *M. beryllina* survival, growth and variability were met.

Test Results

M. bahia	Survival NOEC:	4.29%
	Growth NOEC:	4.29%
M. beryllina	Survival NOEC:	7.63%
	Growth NOEC:	7.63%

Test Conclusions

M. bahia	Significant lethality at the critical dilution?	Yes	Fail
	Significant sublethality at the critical dilution?	Yes	Fail
M. beryllina	Significant lethality at the critical dilution?	No	Pass
	Significant sublethality at the critical dilution?	No	Pass

INTRODUCTION

A grab sample of LOOP, LLC Outfall 004 Brine was collected on February 3, 2016, and was received by CK Associates on February 3, 2016. A *Mysidopsis bahia* Survival and Growth Toxicity Test and a *Menidia beryllina* Larval Survival and Growth Toxicity Test were conducted as described below.

METHODS

The samples were tested in accordance with Short-Term Methods for Estimating the Chronic Toxicity of Effluents and Receiving Waters to Marine and Estuarine Organisms, Third Edition. U.S. Environmental Protection Agency, Office of Water, Washington, D.C. EPA 821–R–02–014, October 2002. The following effluent concentrations were established for testing: 3.22, 4.29, 5.72, 7.63, and 10.17%. The dilution water was an aged synthetic seawater control tested concurrently with the effluent concentrations.

Test Parameters	*Mysidopsis bahia*	*Menidia beryllina*
Test Method	1007.0	1006.0
Organism Source	CK Associates	CK Associates
Organism Age	7 days	11 days
Test Chamber Material	Polypropylene	Polypropylene
Test Chamber Volume (mL)	300	710
Test Solution Volume (mL)	150	500

Following termination, the data were analyzed using TOXCALC version 5.0.23j.

The reference toxicant, potassium chloride, was used to monitor the sensitivity of the test organisms and the precision of the testing procedure. Chronic reference toxicant tests are performed at least monthly and the resulting NOEC values are plotted to determine if the results are within prescribed limits.

RESULTS

Mysidopsis bahia

Average survival and average weight per original organism after 7 days of exposure are tabulated below.

Percent Effluent	Percent Survival	Growth (mg)
Dilution Control	100	0.27
3.22	100	0.28
4.29	90	0.26
5.72	70	0.14
7.63	0	0.00
10.17	0	0.00

The dilution control met performance criteria for survival, growth and variability. Based on the statistical analysis (pages 5 through 7) the survival and growth NOECs of the LOOP, LLC Outfall 004 Brine were 4.29% and 4.29%, respectively. The IC_{25} was 4.9%. Detailed data for the test, including survival, growth and water quality, are presented on pages 13 through 16 and 21 through 24.

Menidia beryllina

Average survival and average weight per original organism after 7 days of exposure are tabulated below.

Percent Effluent	Percent Survival	Growth (mg)
Dilution Control	100	1.63
3.22	98	1.63
4.29	100	1.67
5.72	98	1.61
7.63	96	1.58
10.17	0	0.00

The dilution control met performance criteria for survival, growth and variability. Based on the statistical analysis (pages 8 through 10) the survival and growth NOECs of the LOOP, LLC Outfall 004 Brine were 7.63% and 7.63%, respectively. The IC_{25} was 8.2%. Detailed data for the test, including survival, growth and water quality, are presented on pages 17 through 24.

QUALITY CONTROL

The reference toxicant NOEC was within one NOEC of the mode of the twenty most recent reference toxicant NOEC values (pages 11 and 12).

Test Preparation Documentation

Client: LOOP - INVESTIGATIVE

Outfall: 004

Test ID: 16020401

Site-spec. Instruct.: Due to the high salinity of the effluent (brine @ 315 ppt), the dilution water is prepared at a salinity gradient to maintain a constant salinity in the final test solution. The final target salinity is 31ppt.

Note: All volumes are expressed in milliliters (mL)

To: Monica Eues
Subject: LOOP Brine Study Datapack

Importance: High

Monica,

The brine sample is at 315ppt, therefore the test dilutions must be mixed as follows;

Dilution	ASSW (31ppt)	DI	Brine (315ppt)
Control	3800	0	0
3.22%	2560	1118	122
4.29%	2144	1493	163
5.72%	1595	1988	217
7.63%	862	2648	290
10.17%	0	3414	386 - final salinity will be above target of 31ppt

Since this is non-compliance I took the liberty of minor rounding to make the mixing process easier.

Please generate final datapack so we can initiate this today.

Gus Zieske
