**Subject:** March wet/dry mapping

The PAG 9-mile, quarterly, flow-extent mapping of Pima County's Cienega Creek Natural Preserve will take place on March 18th. **RSVP soon as we have a cap on the number of participants we can allow.**

Enjoy hiking, joining the discussion, sharing your knowledge, learning from others, and helping us gather data. You can help by monitoring pool sizes and secondary channels, positively identifying species of interest for the county's conservation plans, conducting your own surveys and letting other's learn about your work. Please let me know if you have a 4WD to offer in the caravan.

These seasonal base flows tend to be one of largest flow extents of the year, so we are eager to see how last calendar year's rain fall may slowed drought conditions. So far it looks like El Nino helped bring rainfall back up to the old average precipitation levels.

**Also, save the date for the Cienega Watershed Partnership's annual celebration**, taking place this year at Borderlands Brewery in downtown Tucson on April 2, 4-6pm! Celebrate the Wall of Honor Awards, learn about partner programs,

come see how youth are engaged, enjoy live music and a food truck, and bid at the Silent Auction.
