Subject: EPA Review of the Proposed Modification to the Louisiana Offshore Oil Port (LOOP)

Dear Mr. Labat:

The Maritime Administration (MARAD) and the United States Coast Guard (USCG) have contacted EPA Region 6 concerning our review and analysis of the proposed modification to LOOP's Port Operations Manual and Deepwater Port License. To assist the MARAD and USCG review, other Federal agencies, including EPA, were askedto provide comments regarding the adequacy of LOOP's submission for compliance with the Deepwater Port Act (DPA) license requirements, National Environmental Policy Act (NEPA), and other applicable Federal and state statues.

On November 21, 2017, EPA Region 6 received a copy of LOOP's project description dated March 22, 2017 and the LOOP's Bi-Directional Main Oil Line Environmental Impact Analysis dated September 2017 from the MARAD and USCG. We also received a copy of the legal analysis memorandum completed by a private law firm regarding the Department of Interior (DOI) and EPA jurisdiction of Outer Continental Shelf (OCS) air emissions and submitted to MARAD and USCG on LOOP's behalf. The proposed modification includes conversion of a portion of the existing crude oil importing operation to accommodate crude oil exporting operation

After reviewing the referenced LOOP documents, EPA has determined that additional information is needed to complete EPA's portion of the Clean Water Act (CWA) permit and to establish if LOOP may have triggered any permitting obligations under the Clean Air Act (CAA). The NEPA and cross-cutting statutes and regulatory consultation documents associated with the proposed project need to be sufficient for our use in regulatory permit actions. In addition to the comments below, please note that additional information may be needed as we more fully examine LOOP's existing and proposed project's plans.

CLEAN WATER ACT. The LOOP deepwater port license project description received by EPA Region 6 did not include a copy of the National Pollutant Discharge Elimination System (NPDES) permit application forms. We have, however, been working with the Louisiana Department of Environmental Quality (LDEQ) on reissuance of the joint EPA/Louisiana issued N/LPDES permit. In accordance with the applicable environmental permit regulations, (40 CFR 124.3(c), 54 FR 18785, May 2, 1989) this information was reviewed and determined to be administratively complete. LDEQ has drafted a revised permit with EPA input and is currently being reviewed by the Agency before going to public notice. EPA is also currently engaging with other federal partners including the National Oceanic and

Atmospheric Administration and the U.S. Fish and Wildlife on cross-cutting environmental statutes.

CLEAN AIR ACT. EPA has reviewed the legal memorandum, dated November 22, 2017, completed by a private law firm and sent to the Maritime Administration and USCG on LOOP's behalf. In this Memorandum, LOOP claims that it's an offshore marine terminal and operations at the terminal which is located in the Gulf of Mexico west of 87.5 degrees longitude and are therefore subject to exclusive DOI jurisdiction and not EPA's jurisdiction. The Memorandum also states that in designing, building and operating the Bi-directional Oil Pipeline Project, LOOP is not required to engage in the EPA permitting process or to consider EPA air emissions standards. However, recent correspondence from DOI to MARAD and USCG states "LOOP does not hold a BOEM-issued lease, ROW, or RUE nor are they an operator of a lease, and therefore LOOP is not subject to BOEM regulations."

Instead, LOOP has a Deepwater Port Act (DPA) license first issued by Department of Transportation (DOT) on December 17,1976. In general, the DPA states that a deepwater port "shall be considered a 'new source' for purposes of the Clean Air Act." Based upon the DPA, CAA and the DPA license, LOOP is considered a deepwater port and is subject to CAA jurisdiction.

Please note that prior to the issuance of a CWA and/or CAA permit(s), EPA is required to comply with the Endangered Species Act, the Magnuson-Stevens Fishery Conservation and Management Act and the Marine Mammal Protection Act.

EPA would welcome the opportunity to discuss the CWA and CAA regulatory applicability issues with you in more detail. Please feel free to contact me at your nearest convenience to arrange a meeting or conference call. My direct phone number is (214) 665-6580 and email address is Lawrence.Rob@epa.gov.

Sincerely yours,

Robert D. Lawrence
Senior Policy Advisor – Energy Issues
