Ocean Veritas PowerPoint Bullets for 6/29/2010
Operational Period: 6/28/2010 Sampling Period

- The results for Rototox samples OV068, OV069 and OV072 collected on 6/27/2010 did not indicate any significant mortality and control survivability was good. Rototox samples were collected from Station OV073 on 6/28/2010. Results will be available tomorrow.

- The CTD array data showed fluorescence signals at Stations OV073 and OV075. No fluorescence signals were detected at Station OV074. No drops in dissolved oxygen were associated with the fluorescence signals.

- The LISST data indicated that small droplet concentration was low throughout the entire water column for Stations OV073 and OV074. Due to the CTD malfunction at OV075, only the bucket sample (depth of 0.5 meters) was collected and analyzed.
