Endeavor PowerPoint Bullets for 6/25/2010
Operational Period: 6/24/2010 Sampling Period

- The RV Endeavor conducted a “tow yo” sampling in which the CTD was deployed and lowered to depths of 800 and 1300 m as the ship traveled at 2 knots. The Endeavor traveled 360 degrees at a 3 nmi radius from the wellhead. During the “tow-yo” sampling, evidence of a plume was located due west of the wellhead was revealed with sensor data.

- No water samples were taken today.

- Tomorrow, water samples will be collected with the rosette at the western site identified during the “tow-yo” scan. Samples will be collected every 10-20 m between the depths of 800 and 1300 m.

- The Sentry will be deployed on the evening of 6/24/2010.
