Okay, I taken some notes from these for the cancer MOA(s), and I had some comments/questions noted in track changes. Let me know if you had any questions regarding my comments...
Thanks,

jf

Andrew- Impressive amount of work here. Please have a look at my comments and changes. Let's discuss if you have any questions or clarifications.

Keith

Hi all,

Attached please find the synthesis for the main body of the tox review (~39 pages, including tables and figures), as well as the study evaluation/ synopsis supplemental table (for the appendix).

I still intend to make some edits (deleting and clarifying text) and add references here and there, but I think it would be useful to get input from you fine folks at this point. In particular, I need Keith to take a close look, as I was trying to learn

about airway immune responses on the fly while writing this, but there are also some specific call-outs to the rest of you to fact-check things or suggest references. You will find that you do not need read all 39 pages, as it is subdivided by tissue region and hazard. There are also some highlights and notes to myself, which you can ignore☺

I have not yet prepared a literature search diagram (exclusions and abstracts should all be in HERO for the formaldehyde-specific studies) or added the review articles I cited to HERO.

Thanks in advance for taking a look and please let me know if you need any clarification, or if I should send it along to anyone else. Ideally, I would like comments by the end of next week, but I know that may be asking a lot of some of you.

Enjoy!
-Andrew
