Subject: Temporal Issues Workshop Manuscript Draft
161107 january 2016 temporal issues workshop report draft.docx
figure_2_table.xlsx

Good afternoon,

An initial working manuscript for the "Temporal Exposure Issues" workshop held in January has been drafted and we are seeking an initial review and input from all EPA/NTP participants who wish to provide comments. A phased approach is planned for author review; this first review request is being made to colleagues within EPA and other federal partners. Subsequent to this review, the manuscript will be distributed widely to all authors.

In addition to general comments, we are seeking input on several specific items:

•□□□□□□□□ Please indicate your preference on inclusion as an author. If you would like to be included as an author, please indicate how you would like your name to appear and also if you have any actual or potential competing financial interests.

•□□□□□□□□ Attempts have been made to include pertinent citations, including those from participants as well as relevant supporting literature, however there is a need for additional citations for some sections. Please provide any citations of which you may be aware. Note that there was not deliberate omission of any specific citation and all provided are welcome!

•□□□□□□□□ Every effort has been made to reflect the content of speakers' presentations and participants' comments accurately. Please correct any text that is inaccurate or misrepresentative.

•□□□□□□□□ Specific comments and suggestions for the research and risk assessment needs would be helpful. Due to the number and diversity of needs and suggestions, developing a cohesive, informative message was difficult. Any ideas to improve this section would be greatly appreciated.

•□□□□□□□□ The current intent is to submit to Environmental Health Perspectives for publication consideration. If there are alternate journals which would be suitable, please feel free to make suggestions.

Notes on figures/tables:

•□□□□□□□□ Figures and tables are still under development as are high resolution files for figures and tables.

•□□□□□□□□ With the thought that visuals are frequently more compelling than tables, the aim is to convert an existing table of exposures demonstrated to have adverse outcomes into Figure 2. That table is also attached to this email; if there are any ideas for this figure, please let us know as coming up with ideas for this figure has been a challenge.

•□□□□□□□□ For the tables that summarize current risk assessment guidance, it has been proposed to include a column citing assessments that exemplify the use of the guidance cited. We would like to gather opinion for this idea. If the consensus is that it would add value to the manuscript, please provide any examples that could be incorporated.

To move this manuscript into submission as quickly as possible, please provide responses and comments by Monday, November 28. If a response is not received by close of business on that day, it will be assumed that you wish to not be included as an author and do not have any comments or corrections to provide. Please contact us to discuss any alternate arrangements, if necessary.

Thank you so much for your help and support moving this report into publication. Your contributions to the workshop have been greatly appreciated and we hope to be able to share with the wider scientific community at least a small snapshot of the many issues raised during the informative presentations and productive conversations on this important topic.

Regards,
