Re: Docket identification (ID) number EPA-HQ-OPP-2016-0385

I am so very disturbed by the finding of glyphosphate in our vaccines! It's bad enough that we are bombarded with this poison from what we *thought* was from all directions, but to inject it directly IN to the blood streams of some of the most vulnerable.... I am disgusted. We are an embarrassing laughing stock. Poisons in our food, drinking water, and now vaccines? In many places it is a requirement for children to have vaccines before they are allowed to enter school, and so that means that it is a requirement for kids to be injected with poisons in order to receive a standard education. Other countries have banned the use of this pesticide because health concerns, but the US refuses to follow suit. And now we have this chemical in the vaccines we are giving to our children and expecting them to be healthier for it, yet it is connected with cancer risks, autism, brain damage, brain development issues, endocrine disruption, and on and on. We are a nation with major health concerns that seem to grow exponentially with every passing year, some of which have a lot of questions surrounding the chemical exposure we are subject to daily. Why (litterally) inject more toxins, toxins that have known risks, into the lives of the unsuspecting vulnerable population of this country?? I am begging that this issue is looked upon as a risk to the future of our childeren, nation, and world health and is resolved with utmost priority. Thank you for your time.
