COMMENTS

*this check not included in Level II validation

3. The laboratory reported one extra analyte (1,2-Dichloroethene(Total)) for the VOC samples.

10. Issues noted for most parameters. All are based on laboratory limits, which do not affect flagging for this site, except:

VOC – Batch 391647, MS/MSD %R not applicable for 2CEVE because this compound not recovered in acidified samples

RSK175 – SUs diluted out in sample 07, 08

Nitrate – for samples 01, 02, 07, 08, Nitrite conc higher than Nitrite/Nitrate. Nitrate calculated as Nitrite/Nitrate – Nitrite. This is generally due to matrix interference on Cd column. Column efficiency tested at 0.5 mg/L was 100%. (MS/MSD prepared using sample 02 shows good recovery -> no flags applied)

24. Actual MDL (0.000455 mg/L) slightly above Target MDL (0.0004 mg/L) for Hexachlorobutadiene. Actual MQL (0.005 mg/L) above Target MQL (0.002 mg/L) for Methane (dissolved).

28. Organics results (including reporting limits) in ug/L as agreed with lab. All inorganic in mg/L.

32. All analytes routinely spiked by lab are included as per QAPP. This is every TA except n-Butyl alcohol.

COMMENTS

Level IV Check - GC/MS RRF for instrument calibration also included in Level III checks after deficiencies noted in first samples – see Attachment 1 for deficiencies noted

3. Dichlorodifluoromethane is not reported for the equipment blank (SE-060408-EB) and one trip blank (TRIP BLANK-1) or for the QC (LCS, LCSD, and method blank) associated with the aqueous blanks. Results (all non-detects) are reported for the environmental samples plus the field blank and two trip blanks. The validator did not request corrections from the lab since results for the environmental samples are not affected.

Reanalyses for four metals (Sb, B, Se, Sn) were requested for the field samples (2WSED8 (1-2), 2WSED10 (1-2), 4WSED2 (0-0.5), and 4WSED3 (0-0.5)) and the field MS/MSD after PBW noted significant discrepancies for these analytes compared to all previous sediment samples from the site (Antimony and Boron previously 3-10x lower; Selenium and Tin previously not detected). For each sample, two separate aliquots from the original container were analyzed in separate batches and results are reported using the sample ID plus a suffix of 'A' and 'B' in set 208071047. Thus, three results are reported for these samples/analytes. QC is similar for all three batches. (The MS/MSD %R for Antimony was extremely low (<30%) with good PDS recovery for all three batches, but the original analyses were not flagged because the check was waived due to a high conc in the parent sample.) Results are significantly different for the original versus the re-analyses (RPD = 32 to 196), while the two re-analyses compare well (RPD = 0 to 32).

10. Issues noted for all parameters. All are based on laboratory limits, which do not affect flagging for this site, except:

VOC – For batch 375350, Chloroform and Methylene chloride at estimated conc in method blank; For batch 375282 (aq blanks), Chloroform and Naphthalene at estimated conc in method blank

PEST – Confirmation RPD > 40% for gamma-Chlordane in 2WSED8 (1-2), higher result reported -> Revised report submitted 6/28/08 with this detect removed. Upon examination, the laboratory determined that this detect was a false positive (based on a retention time shift on the second column and the large RPD between columns)

11. All VOC soil samples analyzed at a 50 (methanol extract) dilution for 2-Chloroethylvinyl ether and n-Butyl alcohol due to calibration problems for low-level solid analysis. Sample 4WSED3 (0-0.5) and its MS/MSD diluted to eliminate interference from non-target background. SUs diluted out. SHELL samples diluted due to physical/chemical interference (all detects).

17. Sample 2WSED8 (1-2) is reported as SWSED8 (1-2). The validator corrected the ID in the EDD. Corrections from the lab for EDD/Hardcopy were not requested to save time for these quick turnaround samples.

24. Actual MDLs are above the target MDLs for the following:

	Target MDL (mg/kg)	Actual MDL (mg/kg)
Copper	0.13	0.17
Benzidine	0.067	0.252
Bis(2-Ethylhexyl)phthalate	0.022	0.038

Actual MQLs are above the target MQLs for the following:

	Target MQL (mg/kg)	Actual MQL (mg/kg)
Benzidine	1.32	1.65

25. The VOC soil samples were analyzed as high level soils (50x dilution) for 2-Chloroethylvinyl ether and n-Butyl alcohol. Sample 4WSED3 (0-0.5) diluted 10x for Pest/PCB.

28. Results, SDLs, and SQLs are in mg/kg dry-weight as requested. However, the user should note that the MDLs and MQLs for organics are in ug/kg and this is not accounted for in the Prep Factor or Dilution Factor.

32. All analytes routinely spiked by lab are included as per QAPP. This is every TA except n-Butyl alcohol, Toxaphene, and the 5 middle Aroclors.

CASE NARRATIVE

Client: Pastor, Behling, & Wheeler **Report:** 208080117

Gulf Coast Analytical Laboratories received and analyzed the sample(s) listed on the sample cross-reference page of this report. Receipt of the sample(s) is documented by the attached chain of custody. This applies only to the sample(s) listed in this report. No sample integrity or quality control exceptions were identified unless noted below.

VOLATILES MASS SPECTROMETRY

In the SW-846 8260B analysis, samples 20808011705 (MW 32C), 20808011706 (MW 32C MS), 20808011707 (MW 32C MSD) and 20808011708 (MW-905) had to be diluted to bracket the concentration of target compounds within the calibration range of the instrument.

In the SW-846 8260B analysis for analytical batch 395040, the MS/MSD exhibited failures for the recoveries and/or RPDs. This is due to the high concentration of target analytes in the native sample.

Laboratory Endorsement

Sample analysis was performed in accordance with approved methodologies provided by the Environmental Protection Agency or other recognized agencies. The samples and their corresponding extracts will be maintained for a period of 30 days unless otherwise arranged. Following this retention period the samples will be disposed in accordance with GCAL's Standard Operating Procedures.
