COMMENTS

Level IV Check - GC/MS RRF for instrument calibration also included in Level III checks after deficiencies noted in first samples – see Attachment 1 for deficiencies found

Level IV Check – GC secondary confirmation RPD checked for all samples in this work order based on deficiency noted by laboratory in narrative – see Attachment 1 for deficiencies found

3. One planned sample (SB205(5-6)) was not collected because debris was present at this depth interval. The debris had been sampled as part of the 3-4 foot sample from this location and EPA agreed that a deeper sample was not appropriate. At the laboratory, problems were encountered with the 3-4 foot sample (SB205(3-4)) due to suspected high levels of naphthalene (the extracts solidified during the concentration step and smelled and looked like naphthalene) and thus no organics analyses were completed on this sample. Also note that the sample depth intervals from SB204 and SB206 were adjusted slightly from the planned depths due to the presence of debris in order to fulfill the objective of one sample above the debris, one sample from within the debris, and one sample from below the debris.

For all water blanks and associated QC, the laboratory reported 1,2-Dichloroethene (Total) in addition to the cis- and trans- results. Typically, only the individual isomers are reported.

4. The laboratory was unable to analyze SS-110607 EB and SS-110607 FB for Hex Cr due to insufficient unpreserved sample volume. All project samples are ND so there is no effect on data quality. Only Aroclor 1254 was requested and reported for SS-110607 EB and SS-110607 FB. All samples are ND for the other Aroclors so no further action taken.

10. Issues noted for all parameters. All are based on laboratory limits, which do not affect flagging for this site, except:

VOC – Sample 07 analyzed at 1x and 50x dilution . PCE is above the upper calibration range in the 1x and ND in the 50x. Both results reported.* DBFM surrogate above lab limit in the 1x (but within project limits). Target compounds not associated with this surrogate.

QC batch 361728 (samples 2,6,9,11,12 – low level) and QC batch 361759 (sample 4 – low level): no MS/MSD due to insufficient sample (MS/MSD run at 1000x dilution due to high conc in unspiked sample, i.e., methanol extraction – used by validator to assess other methanol-extracted samples only), acetone and chloroform in lab blank

QC batch 361729 (EB and FB samples): acetone in lab blank

QC batch 361755 (samples 2,4,6,8,15,16,17 – high level): numerous high RPDs for MS/MSD, attributed to large differences in the Encore weights for the MS and MSD aliquots since RPD calculated on conc and not recovery (but all <project limit), acetone and naphthalene in lab blank

QC batch 361760 (samples 7,9,10,11,12,14,18 – high level): no reportable MS/MSD (extant), acetone and naphthalene in lab blank

SVOC – QC batch 361275 (EB and FB samples): benzo(k)fluoranthene, benzo(g,h,i)perylene and chrysene in lab blank

QC batch 361870 (samples 3,4,15,16,17,18): diethylphthalate and di-n-butyl phthalate in lab blank

PEST – RPD between original and confirmation result >40 for Dieldrin in sample 08 (lower value reported due to obvious co-elution on the confirmation column) and for DDE in sample 14.

Heptachlor reported in sample 21, an equipment blank, with RPD >40 (higher value reported). Insufficient sample for re-extraction (and Heptachlor has historically been present in field blanks and was not detected in any of the project samples collected this event).

COMMENTS (continued)

CrVI – QC batch 361088: The MS/MSD recoveries are 0%. LCS and PDS recovery acceptable. This indicates the analysis is in control and the sample matrix reduces Chromium VI and it will not exist in these samples.

* The validator requested the 1x results (5-g purge) due to the elevated detection limits for non-detects in the 50x dilution (methanol extraction). To save time, the laboratory submitted the additional results in hardcopy only and the validator added them to the EDD. The validation showed no QC deficiencies for either analysis except that PCE is above the upper calibration range in the 1x analysis. Both target analytes are non-detect in the 50x dilution and are detected (near or below the quantitation limit for the 50x dilution) in the 1x analysis as shown below. Thus, the validator selected the 1x analysis for use.

ND3SB04 (4-5)	1x ANALYSIS (mg/kg)				50x DILUTION (mg/kg)			
Parameter	Result	SDL	SQL	QC Def.	Result	SDL	SQL	QC Def.
1,2,3-Trichloropropane	0.0472	0.000245	0.002	none	U 0.0124	0.0124	0.101	none
Trichloroethene	0.29 E	0.000177	0.00499	above UCL	U 0.00893	0.00893	0.252	none

11. VOC samples 2,4,6,9,11,12 at 50x for 2CEVE (due to poor QC at low level). Sample 07 at 50x dilution (due to high level of TA). VOC samples (8,10,14,15,16,17,18) diluted to bracket TA concs in calibration range.
SVOC sample 10 diluted to bracket TA concs in calibration range, SUs diluted out
PEST samples 3,8,10,14,15,16,17 diluted to bracket TA concs in calibration range, SUs diluted out in sample 10
PCB samples 8,10 diluted to bracket TA concs in calibration range, SUs diluted out in sample 10. Samples 3,14,15,16,17 also diluted due to interference from non-TA background.
Metals sample 3 diluted to bracket concs in linear dynamic range and due to chemical or physical interference, sample 13 diluted due to chemical or physical interference.

24. Actual MDLs are above the target MDLs for the following:

	Target MDL (mg/kg)	Actual MDL (mg/kg)
Copper	0.13	0.17
Benzidine	0.067	0.252
Bis(2-Ethylhexyl)phthalate	0.022	0.038
Nitrobenzene	0.019	0.040
n-Nitrosodimethylamine	0.065	0.097

Note that the MDLs have been routinely updated (i.e., raised or lowered) by the laboratory (based on new MDL studies and/or MDL check standards) since the second round (April 07) of soil sampling. Several other Metals, SVOCs, and Pesticides have higher MDLs (>2x) than previously reported, but all are below the Target MDLs. All MQLs are the same and meet the Target MQLs.

25. Six VOC samples (7,8,10,14,18) at 50x (high level) and one VOC sample and its MS/MSD (15,16,17) at 1000x for all TAs plus all remaining VOC samples at 50x for 2CEVE only. One SVOC sample (10) diluted 10x for all TAs. Five Pest/PCB samples (3,8,10,14,15) and the MS/MSD (16,17) diluted 5-100x for all TAs. Two Metals samples (02, 13) at 2-10x for all TAs.

28. For the 50x dilution for sample ND3SB04 and its corresponding QC, the VOCs are reported in ug/kg rather than ppm as requested. For the EBs and FBs and associated QC, all the SVOCs, Pests, and PCBs are in ug/L. Additionally, for organics in all remaining samples, the SDLs and SQLs are in ppm as requested; however, the user should note that the MDLs and MQLs are in ppb and this is not accounted for in the Prep Factor or Dilution Factor.

32. All analytes routinely spiked by lab are included as per QAPP. This is every TA except n-Butyl alcohol, Toxaphene, and the 5 middle Aroclors.

COMMENTS (continued)

34. A Field MS/MSD pair was collected at SB-206(3-4) and a Field Duplicate at SB-206(0-0.8). For previous sets, field QC samples have been used to assess data quality for all samples of the same media (i.e., GW, ICWW SW, Pond SW, ICWW Sediment, OnSite Sediment, or Soil Borings) that are part of the same event (i.e., collected, shipped, and received at the same time). However, due to the nature of the samples collected in this set (one vertical extent of contamination sample from the North area, three samples from an area south of the Fresh Water Pond with scrap metal debris, and three samples from the North area where subsurface debris (i.e., a section of large rope) was observed), the SB-206 field QC samples were used to assess data quality only for the other samples collected from the same vicinity (i.e., the SB-204, SB-205, and SB-206 areas around the rope debris).

40. Completeness is below the project goal of 80% on an analyte level for Chromium VI and 2-Chloroethylvinyl ether. For Chromium VI, all of the Phase 1 SB and SS samples were mistakenly not analyzed for this one constituent due to a miscommunication between the sampler, laboratory, and validator. Total Chromium was reported and usable for all soil samples. For 2-Chloroethylvinyl ether, several low-level soil results were rejected due to 0% recovery in the MS/MSD. This analyte is a highly reactive compound subject to hydrolysis catalyzed by acidic sites in clay soils and to biodegradation in soil. The analyte has not been detected in any of the non-"R"-flagged soil samples, has not been detected in other media, and is not historically associated with Site and thus no corrective action has been instituted.

Usability: All data suitable as qualified for the intended use except for 8 results for Benzidine, 9 results for Chromium VI, and 9 results for Selenium. Data for 2,4-Dinitrophenol, 2-Chloroethylvinyl ether, Acrolein, Benzaldehyde, n-Butyl alcohol, and trans-1,4-Dichloro-2-butene are usable with an elevated reporting limit for the non-detects (as given in the Electronic Data Deliverable). Measurements qualified with a U-flag should be considered not present at the concentration reported.

For Semivolatile Organics, the MS/MSD prepared using sample SB206 (3-4) had 0% recovery for Benzidine. Extremely low recovery for organic MS/MSD does not require rejection of data. However, since the associated samples (i.e., the SB-204, SB-205 and SB-206 samples, which were collected from the same vicinity around the rope debris) are considered to be of very similar matrix and there was no recovery in either the MS or MSD, the validator qualified all non-detects for Benzidine in the associated samples as rejected (R).
