DATA VALIDATION CHECKLIST (Level III and Level IV)				
Client Name: Pastor, Behling, & Wheeler	Project Number: 1352			
Property Location: Gulfco Superfund Site	Project Manager: Eric Pastor			
Laboratory: GCAL – Baton Rouge, LA GEL – Charleston, SC	Laboratory Job No.: GCAL - 206072002 GEL – 167603			
Reviewer: Taryn Scholz (QAA, L.L.C.)	Date Checked: 11/28/06			
ITEM	**Yes**	**No**	**NA**	**Comment Number**
Chain of Custody (COC) and Sample Receipt at Lab				
1. Signed COCs included and seals used?	X			
2. Date and time of sample collection included?	X			2.
3. All samples listed on the COC analyzed for in accordance with the RI/FS Work Plan?	X			
4. Field QC sample frequency met project requirements?		X		4.
5. Sample receipt temperature 2-6°C?	X			
6. Samples preserved appropriately?	X			
7. Samples received within 2 days of collection?	X			from GCAL
8. No problems noted?	X			
Laboratory Report and Data Package				
9. Signed Case Narrative included?	X			
10. No analytical discrepancies noted in case narrative?		X		10.
11. Elevated reporting limits justified?			X	
12. MDLs reasonable per DCS?			X	12.
13. Calibration data acceptable?	X			ecd8 072506
14. ICV and CCV recoveries within project control limits?		X		see attached
15. ICB and CCB results <RL (MQL)?			X	
16. Internal standard areas within project control limits?			X	
Laboratory EDD				
17. Field sample IDs included?		X		17.
18. Laboratory sample IDs included?	X			
19. Date of analysis included?	X			
20. Date of sample preparation included?	X			
21. Samples prepared within holding time?	X			
22. Samples analyzed within holding time?	X			
23. Detection limit and quantitation limit included?	X			
24. Project target limits achieved?	X			
25. No elevated reporting limits?	X			
26. Method references included?	X			
27. Sample matrix included?	X			
28. Sample result units reported correctly?	X			in ug/kg
29. Soil/ sediment results corrected for dry-weight?	X			
30. Method blank results <RL (MDL)?	X			
31. Equipment and Trip blank results <RL (MDL)?			X	
32. All COIs included in LCS?	X			
33. LCS recovery within project control limits?	X			
34. MS/MSD recoveries within project control limits?		X		see attached
35. LCS/LCSD RPDs within project control limits?	X			
36. MS/MSD RPDs within project control limits?		X		see attached
37. Laboratory duplicate RPDs/Diffs within project control limits?			X	
38. Field duplicate RPDs/Diffs within project control limits?			X	
39. Surrogate recoveries within project control limits?	X			
40. Completeness percentage within project limits?	X

Definitions: **CCB** – Continuing Calibration Blank; **CCV** – Continuing Calibration Verification; **COI** – Compounds of Interest; **DCS** – Detectability Check Sample; **ICB** – Initial Calibration Blank; **ICV** – Initial Calibration Verification; **LCS** – Laboratory Control Sample; **LCSD** – Laboratory Control Sample Duplicate; **MDL** – Method Detection Limit; **MS/MSD** – Matrix Spike/Matrix Spike Duplicate; **RL** – Reporting Limit; **RPD** – Relative Percent Difference				

COMMENTS

2. Collection Time for sample 20607200207 (SJ5SB81-161-(0-0.5)) in EDD is incorrect (reported as 12:02, actually 12:20). Correction added to EDD in {}.

4. No field blanks, equipment blanks, or field duplicates analyzed for PCB-Congeners. (Aroclor analyses show all non-detects in field/equipment blanks and good precision for soil samples.)

10. Issues noted. All are based on laboratory limits, which do not affect flagging for this site, except:

Two TAs failed CCV acceptance criteria on one column for this SDG; these two TAs not detected on either column thus no effect on the data

Recoveries and RPDs for MS/MSD not within lab limits

Elemental mercury and alumina cleanup used for sample extracts

12. GEL laboratory packages do not include quantitation reports, chromatograms or MDL/DCS documentation. Since some of the soil samples have detects, the validator requested quantitation reports/ chromatograms for all of the soil samples and the laboratory submitted them separately in pdf files (one for each of the three work orders) on 10/25/06. All other QC information is available on summary forms, no further action was taken.

17. Analyses were subcontracted and thus the Sample ID in the EDD is the primary Lab ID (from GCAL).

DATA VALIDATION CHECKLIST (Level IV only)				
Client Name: Pastor, Behling, & Wheeler	Project Number: 1352			
Property Location: Gulfco Superfund Site	Project Manager: Eric Pastor			
Laboratory: GCAL – Baton Rouge, LA GEL – Charleston, SC	Laboratory Job No.: GCAL - 206072002 GEL – 167603			
Reviewer: Taryn Scholz (QAA, L.L.C.)	Date Checked: 11/28/06			
ITEM	**Yes**	**No**	**NA**	**Comment Number**
Laboratory Report and Raw Data Package				
1. Sample results calculated and transcribed correctly?	X			
2. QC parameters calculated and reported correctly?	X			
3. Pesticide breakdown ≤ 15%?			X	
4. GC/MS tuning performance within criteria?			X	
5. GC/MS RRF above minimum project requirements?			X	
6. ICP ICS recoveries within criteria?			X	
7. ICP ICB/CCB absolute value of results <MQL?			X	
8. GC qualitative identification criteria met?	X			
9. GC/MS qualitative identification criteria met?			X	
10. GC second confirmation RPD criteria met?		X		10.

COMMENTS

Checked Sample 07

10. RPD > 40% for Hexachlorobiphenyl (153) at 51% and Pentachlorobiphenyl (105) at 52%. The laboratory reported all sample results from one column, i.e. the front column, which was selected as the primary column by the analyst. The amount from the front column is higher than that from the back column for ten of the thirteen detected analytes. Results with RPD > 40% (flagged P by laboratory) should be considered estimates. No further Validation Qualifiers were applied based on this Level IV only check since there is no critical effect on data usability.

187478

SET SUMMARY
Laboratory Job No.: 206072002

7	Number of Field Samples including Field Duplicates (0)
1	Number of Field MS/MSD Pairs
0	Number of Equipment Rinsate Blanks
0	Number of Field Blanks
NA	Number of VOC Trip Blanks
1	Number of Parameters (PCB Congeners)
31	Number of Target Analytes per Sample
217	Total Measurements for Field Samples
177	Number of measurements with no validation qualifier (i.e., “none” in EDD)
0	Number of measurements with UJ flag
0	Number of measurements with J- flag
20	Number of measurements with J flag (due solely to result being between the SDL and SQL)
20	Number of measurements with J flag (for various analytes due to high ave MS/MSD recovery and/or poor MS/MSD precision)
0	Number of measurements with J+ flag
0	Number of measurements with U flag
0	Number of measurement with NS flag
0	Number of measurements with R flag
100%	Completeness-to-date on a sample level (percentage of soil samples with usable data, project goal 90%)
100%	Completeness-to-date on an analyte level (percentage of soil samples with usable data for a specific analyte, project goal 80%) – PCB Congeners

Usability: All data suitable as qualified for the intended use.

CASE NARRATIVE

Client: Pastor, Behling, & Wheeler **Report:** 206072002 & 206072026

Gulf Coast Analytical Laboratories received and analyzed the sample(s) listed on the sample cross-reference page of this report. Receipt of the sample(s) is documented by the attached chain of custody. This applies only to the sample(s) listed in this report. No sample integrity or quality control exceptions were identified unless noted below.

No anomalies were found for the analyzed sample(s).

187484

LABORATORY ENDORSEMENT

Sample analysis was performed in accordance with approved methodologies provided by the Environmental Protection Agency or other recognized agencies. The samples and their corresponding extracts will be maintained for a period of 30 days unless otherwise arranged. Following this retention period the samples will be disposed in accordance with GCAL's Standard Operating Procedures.

Common Abbreviations Utilized in this Report

ND	Indicates that the result was Not Detected at the specified RDL
DO	Indicates that the result was Diluted Out
MI	Indicates that the result was subject to Matrix Interference
TNTC	Indicates that the result was Too Numerous To Count
SUBC	Indicates that the analysis was Sub-Contracted
FLD	Indicates that the analysis was performed in the Field
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
RDL	Reporting Detection Limit
00:00	Reported as a time equivalent to 12:00 AM

Reporting Flags Utilized in this Report

J	Indicates an estimated value
U	Indicates the compound was analyzed for but not detected
B	(ORGANICS) Indicates the analyte was detected in the associated Method Blank
B	(INORGANICS) Indicates the result is between the RDL and MDL

Sample receipt at GCAL is documented through the attached chain of custody. In accordance with ISO Guide 25 and NELAC, this report shall be reproduced only in full and with the written permission of GCAL. The results contained within this report relate only to the samples reported. The documented results are presented within this report.

This report pertains only to the samples listed in the Report Sample Summary and should be retained as a permanent record thereof. The results contained within this report are intended for the use of the client. Any unauthorized use of the information contained in this report is prohibited.

I certify that this data package is in compliance with the terms and conditions of the contract and Statement of Work both technically and for completeness, for other than the conditions in the case narrative. Release of the data contained in this hardcopy data package and in the computer-readable data submitted has been authorized by the Quality Assurance Manager or his/her designee, as verified by the following signature.

Summary:

Sample receipt

The sample(s) from Gulf Coast Analytical Laboratories, Inc. arrived at General Engineering Laboratories, LLC (GEL) located in Charleston, South Carolina on July 21, 2006 for environmental analyses. The sample containers arrived unbroken without any signs of tampering. The sample containers were delivered with chain of custody documentation and signatures. The shipping container temperature upon receipt was 5°C.

The sample description for 206072002615 on the chain of custody did not match the description on the container. GCAL was notified and verified that the container was correct and e-mailed a corrected copy of the chain. Please see the attached e-mail.

Sample(s) logged by the laboratory:

Case Narrative

Sample analyses were conducted using methodology as outlined in General Engineering Laboratories (GEL). Any technical or administrative problems during analysis, data review, or reductions are listed in the individual analytical case narratives.

Internal Chain of Custody:

Custody was maintained for the sample(s).

Data Package:

The enclosed data package contains the following sections: General Case Narrative, Data Qualifier Flags, Chain of custody, Cooler Receipt Checklist, PCB Congener Analysis.

The following are definitions of reporting limits used at General Engineering Laboratories:

DL — Detection Limit: The minimum level of an analyte that can be determined (identified not quantified) with 99% confidence. The values are normally achieved by preparing and analyzing seven aliquots of laboratory water spiked 1 to 5 times the estimated MDL, taking the standard deviation and multiplying it against the one-tailed t-statistic at 99%. This computed value may then be verified for reasonableness by repeating the study using the concentration found in the initial study, calculating an F-ratio, and computing the final limit. Sample specific preparation and dilution factors are applied to these limits when they are reported.

The detection limit is the minimum concentration of a substance that can be identified, measured, and reported with 99% confidence that the analyte concentration is above zero. It answers the question "Is It Present"

QL — Quantitation Limit: The lowest concentration that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operating conditions. The QL is generally 5 to 10 times the MDL.

However, it may be nominally chosen within these guidelines to simplify data reporting. For many analytes the QL analyte concentration is selected as the lowest non-zero standard in the calibration curve.

Sample QL's are highly matrix-dependent. Sample specific preparation and dilution factors are applied to these limits when they are reported.

The QL is always greater than the DL.

This data package, to the best of my knowledge, is in compliance with technical and administrative requirements.

From: "Dana Merrill" <danam@gcal.com>
Date: Fri, 21 Jul 2006 14:35:44 -0500
To: "David Setzer" <djs@gel.com>

Dave,

The sample container ID is the correct ID. Copy and Paste error. Corrected COC attached.

Dana

Subject: Soil Samples Received Today 7/20/06

Dana,

The sample description [SG3SB55-110-(1-2)] on the container for Sample Id 20607202615 did not match the sample description [SDSB35-070-(1-2)] on the chain of custody (PO060880, Project 20607202). The collect date/time is the same on both (7/18/06 1600). Please verify the correct sample description/Id for the sample received.

Regards,

Dave

DATA REVIEW QUALIFIER FLAG DEFINITION SHEET

General Engineering Laboratories, LLC

DATA QUALIFIERS FOR ORGANIC ANALYSES

Data Qualifiers used on Form 1s or Certificates of Analysis (COA) follow the specifications set forth in the technical specifications of the most current CLP Statement of Work and are defined as follows:

Section	Explanation	Location
A	The TIC is suspected aldol-condensation product.	COA, Form 1, and EDD
B	Analyte was detected in the associated method blank as well as in the sample.	COA, Form 1, and EDD
C	Pesticide analyte has been confirmed by GC/MS.	COA, Form 1, and EDD
D	Analyte(s) quantified in an analysis performed at a secondary dilution factor.	COA, Form 1, and EDD
E	Identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.	COA, Form 1, and EDD
J	This flag indicates an estimated value concerning either, (1) estimating a concentration for tentatively identified compounds (TICs), or (2) analyte detected at a level less than the RDL or PQL and greater than or equal to the MDL.	COA, Form 1, and EDD
N	Presumptive evidence based upon a mass spectral library search to make a tentative identification of the analyte.	COA, Form 1, and EDD
NJ	Analyte has been tentatively identified and the associated numerical value is estimated based upon 1:1 response factor to the nearest eluting internal standard.	COA, Form 1, and EDD
P	- Pesticide/PCB target analyte that is greater than 25% difference for the detected concentrations between the two GC columns. - HPLC target analyte that is greater than 40% difference for the detected concentrations between detectors or columns.	Form 1 and EDD
U	Compound analyzed for but not detected (sample quantitation limit has been adjusted to reflect dilutions and percent moisture).	COA, Form 1, and EDD
X	Other reporting flag as defined in report narrative.	COA, Form 1, and EDD
**	Laboratory Control Sample recovery outside of acceptance limit.	QC Summary Report

All surrogate recoveries and acceptance ranges are reported at the bottom of Form 2 or COA.

GC SEMIVOLATILE PCB ANALYSIS

PCB Case Narrative
Gulf Coast Analytical Labs, LLC (GCAL)
SDG 167603

Method/Analysis Information

Procedure:	**Polychlorinated Biphenyls by ECD**
Analytical Method:	SW846 8082
Prep Method:	SW846 3550B
Analytical Batch Number:	550549
Prep Batch Number:	550548

Sample Analysis

The following samples were analyzed using the analytical protocol as established in SW846 8082:

Sample ID	Client ID
167603001	20607200201
167603002	20607200202
167603003	20607200203
167603004	20607200204
167603005	20607200205
167603006	20607200206
167603007	20607200207
1201141176	Method Blank (MB)
1201141177	Laboratory Control Sample (LCS)
1201142185	Laboratory Control Sample Duplicate (LCSD)
1201141677	167603001(20607200201) Matrix Spike (MS)
1201141678	167603001(20607200201) Matrix Spike Duplicate (MSD)

Preparation/Analytical Method Verification

Procedures for preparation, analysis, and reporting of analytical data are documented by General Engineering Laboratories, LLC. (GEL) as Standard Operating Procedures (SOP).

Raw data reports are processed and reviewed by the analyst using the Target software package. False positives have been removed from the Target quantitation reports per standard operating procedures (SOP) section 23.0.

Calibration Information

Initial Calibration
All initial calibration requirements have been met for this sample delivery group (SDG).

Continuing Calibration Verification (CCV) Requirements
All calibration verification standards (CVS, ICV, or CCV) requirements have not been met for this SDG.

Tetrachlorobiphenyl (77) and 2,2',5-Trichlorobiphenyl (18) did not meet the acceptance criteria with a negative or positive bias on one analytical column in the standards bracketing the samples in this SDG. Since Tetrachlorobiphenyl (77) and 2,2',5-Trichlorobiphenyl (18) were not detected on either column, this non-compliance had no adverse effects on the data.

Quality Control (QC) Information

Method Blank (MB) Statement
The MB(s) analyzed with this SDG met the acceptance criteria.

Surrogate Recoveries
All surrogate recoveries were within the established acceptance criteria for this SDG.

Laboratory Control Sample (LCS) Recovery
The LCS spike recoveries met the acceptance limits.

Laboratory Control Sample Duplicate (LCSD) Recovery
The LCSD spike recoveries met the acceptance limits.

LCS/LCSD Relative Percent Difference (RPD) Statement
The RPD(s) between the LCS and LCSD met the acceptance limits.

QC Sample Designation
Sample 167603001 (20607200201) was selected for the matrix spike and matrix spike duplicate analysis.

Matrix Spike (MS) Recovery Statement
The MS recoveries for this SDG were not within the acceptance limits. The failures were confirmed in the matrix spike duplicate and were attributed to sample matrix interference.

Matrix Spike Duplicate (MSD) Recovery Statement
The MSD recoveries for this SDG were not within the acceptance limits due to sample matrix interference.

MS/MSD Relative Percent Difference (RPD) Statement
The relative percent differences (RPD) between the MS and MSD were not within the required acceptance limits due to sample matrix interference.

Technical Information

Holding Time Specifications
GEL assigns holding times based on the associated methodology, which assigns the date and time from sample collection of sample receipt. Those holding times expressed in hours are calculated in the AlphaLIMS system. Those holding times expressed as days expire at midnight on the day of expiration. All samples in this SDG met the specified holding time.

Preparation/Analytical Method Verification
All procedures were performed as stated in the SOP. Additionally, elemental mercury was added to all sample extracts to remove sulfur. All sample extracts were cleaned using alumina.

Sample Dilutions
The samples in this SDG did not require dilutions.

Sample Re-extraction/Re-analysis
Re-extractions or re-analyses were not required in this SDG.

Miscellaneous Information

Electronic Package Comment

The following package was generated using an electronic data processing program referred to as "virtual packaging". In an effort to increase quality and efficiency, the laboratory is developing systems to eventually generate all data packages electronically. The following change from "traditional" packages should be noted:

Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative of each electronic package will indicate the analyst, reviewer, and report specialist names associated with the generation of the data and package. The data validator will always sign and date the case narrative. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

Nonconformance (NCR) Documentation
The following NCR was generated for this SDG: 342956

Manual Integration
Certain standards and samples may have required manual integration to correctly position the baseline as set in the calibration standard injections. If manual integration was performed, copies of all manual integration peak profiles are included in the raw data section and stored in the laboratory.

Additional Comments
The additional comments field is used to address special issues associated with each analysis, clarify method/contractual issues pertaining to the analysis, and to list any report documents generated as a result of sample analysis or review. The following additional comments were required:

The front column has been chosen as the primary column. The data are reported from the front column for all field samples in this batch.

Due to software limitation, the Form VIIs will display the results either in the % difference or % drift depending on the type of the calibration curve. If the curve of all analytes is generated using an average response factor (RF), the Form VII will display results using the %difference calculation (RF). If the curve of one or more analytes is generated using a linear curve, the Form VII will display results using the % drift calculation (by concentration) for all analytes.

System Configuration

The Semi-Volatiles-PCB analysis was performed on a HP Gas Chromatograph.

Instrument ID	System Configuration	Column ID	Column Description
ECD8A.I_1	HP6890 Series ECD	Rtx-CLP I	30m x 0.25mm, 0.25um (Rtx-CLPesticide I)
ECD8A.I_2	HP6890 Series ECD	Rtx-CLP II	30m x 0.25mm, 0.20um (Rtx-CLPesticide II)

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation:

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

Reviewer: Jimi Cao **Date:** 8/10/06

Roadmap for GCAL 167603 PCB

This roadmap was analyzed by Khoung Yib on 08-07-2006, 08:45.
This roadmap was reviewed by Dale Mori on 08-07-2006, 14:42.
This roadmap was packaged by Yvette Lampkin on 08-08-2006, 18:12.

COMPANY - WIDE NONCONFORMANCE REPORT

Mo.Day Yr.	Division:	Quality Criteria:	Type:
07-AUG-06	Federal	Specifications	Process
Instrument Type:	**Test / Method:**	**Matrix Type:**	**Client Code:**
GC/ECD	SW846 8082	Solid	GCAL
Batch ID:	**Sample Numbers:**		
550549	See Below		

Potentially affected work order(s)(SDG): 167394,167603,167604(167603-1)

Application Issues:

Failed Recovery for MS/PS

Failed RPD for MS/MSD, or PS/PSD

Failed Recovery for LCS/LCSD

Failed Yield for Surrogates

Specification and Requirements Nonconformance Description:	NRG Disposition:
1. The MS and MSD failed to meet the spike recovery. acceptance criteria for several spiking analytes. 2. The RPD between the MS and MSD did not meet the acceptance criteria for several spiking analytes. 3. Sample 167604005 failed surrogate recovery.	1 & 2. The failures are due to sample matrix interference. The parent sample contained Aroclor hit. 3. Sample 167604005 was reextracted due to surrogate failure.

1201141682	167604018(20607202618) Matrix Spike Duplicate (MSD) (Batch 550771)

Preparation/Analytical Method Verification

Procedures for preparation, analysis, and reporting of analytical data are documented by General Engineering Laboratories, LLC. (GEL) as Standard Operating Procedures (SOP).

Raw data reports are processed and reviewed by the analyst using the Target software package. False positives have been removed from the Target quantitation reports per standard operating procedures (SOP) section 23.0.

Calibration Information

Initial Calibration
All initial calibration requirements have been met for this sample delivery group (SDG).

Continuing Calibration Verification (CCV) Requirements
The calibration verification standards (CVS, ICV, or CCV) requirements have not been met for this SDG.

Several bracketing standards failed acceptance criteria with a positive or negative bias on one analytical column for several target analytes. There were no target analytes detected at concentrations above the PQL in the samples affected by these standards; therefore, the non-compliance has no adverse effects on the data.

One of the bracketing standards failed acceptance criteria with a negative bias on both analytical columns for several target analytes. All samples bracketed by this failing standard were re-analyzed and the bracketing standard failed in the same manner; therefore, the standard failure is attributed to sample matrix interference.

Quality Control (QC) Information

Method Blank (MB) Statement
The MB(s) analyzed with this SDG met the acceptance criteria.

Surrogate Recoveries
The surrogate recoveries were not within the established acceptance criteria for sample 167604016 (20607202616) due to dilution.

Samples 167604005 (20607202605) and 167604018 (20607202618) did not meet the surrogate recovery acceptance criteria and were re-extracted. The re-extracted samples failed surrogate recovery in the same manner; therefore the failure is attributed to sample matrix interference.

Laboratory Control Sample (LCS) Recovery
The LCS spike recoveries met the acceptance limits.

Laboratory Control Sample Duplicate (LCSD) Recovery
The LCSD spike recoveries met the acceptance limits.

LCS/LCSD Relative Percent Difference (RPD) Statement
The RPD(s) between the LCS and LCSD met the acceptance limits.

QC Sample Designation
A GCAL sample of similar matrix from another SDG (#167603) was selected for the matrix spike and matrix spike duplicate analysis in batch 550549.

Sample 167604018 (20607202618) was selected for the matrix spike and matrix spike duplicate analysis in batch 550771.

Matrix Spike (MS) Recovery Statement
The MS recoveries were not within the acceptance limits. The failures confirm in the matrix spike duplicate and are attributed to matrix interference.

Matrix Spike Duplicate (MSD) Recovery Statement
The MSD recoveries were not within the acceptance limits due to sample matrix interference.

MS/MSD Relative Percent Difference (RPD) Statement
The relative percent differences (RPD) between each MS and MSD were not within the required acceptance limits due to sample matrix interference.

Technical Information

Holding Time Specifications
GEL assigns holding times based on the associated methodology, which assigns the date and time from sample collection of sample receipt. Those holding times expressed in hours are calculated in the AlphaLIMS system. Those holding times expressed as days expire at midnight on the day of expiration. All samples in this SDG met the specified holding time.

Preparation/Analytical Method Verification
All procedures were performed as stated in the SOP. Additionally, elemental mercury was added to all sample extracts to remove sulfur. All sample extracts were cleaned using alumina.

Sample Dilutions
Sample 167604016 (20607202616) was diluted at 1:20 due to the oily matrix of the extract.

Sample Re-extraction/Re-analysis
Samples 167604005 (20607202605) and 167604018 (20607202618) were re-extracted due to low surrogate recovery.

Miscellaneous Information

Electronic Package Comment

The following package was generated using an electronic data processing program referred to as "virtual packaging". In an effort to increase quality and efficiency, the laboratory is developing systems to eventually generate all data packages electronically. The following change from "traditional" packages should be noted:

Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative of each electronic package will indicate the analyst, reviewer, and

report specialist names associated with the generation of the data and package. The data validator will always sign and date the case narrative. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

Nonconformance (NCR) Documentation
Nonconformance Reports (NCRs) are for documentation of any procedural anomalies that may deviate from referenced SOP or contractual document. NCR#343768 was generated for this SDG.

Manual Integration
Certain standards and samples may have required manual integration to correctly position the baseline as set in the calibration standard injections. If manual integration was performed, copies of all manual integration peak profiles are included in the raw data section of this PCB fraction.

Additional Comments
The additional comments field is used to address special issues associated with each analysis, clarify method/contractual issues pertaining to the analysis, and to list any report documents generated as a result of sample analysis or review. The following additional comments were required:

The front column has been chosen as the primary column. The data are reported from the front column for all field samples in this batch.

All QC samples, except 1201142185 (LCSD), are referred to prep batch number in the Forms in this data package. QC sample (LCSD) is referred to the analytical batch number due to batching error.

Due to software limitation, the Form VIIs will display the results either in the % difference or % drift depending on the type of the calibration curve. If the curve of all analytes is generated using an average response factor (RF), the Form VII will display results using the %difference calculation (RF). If the curve of one or more analytes is generated using a linear curve, the Form VII will display results using the % drift calculation (by concentration) for all analytes.

System Configuration

The Semi-Volatiles-PCB analysis was performed on a HP Gas Chromatograph.

Instrument ID	System Configuration	Column ID	Column Description
ECD8A.I_1	HP6890 Series ECD	Rtx-CLP I	30m x 0.25mm, 0.25um (Rtx-CLPesticide I)
ECD8A.I_2	HP6890 Series ECD	Rtx-CLP II	30m x 0.25mm, 0.20um (Rtx-CLPesticide II)

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation:

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

COMPANY - WIDE NONCONFORMANCE REPORT

Mo.Day Yr.	Division:	Quality Criteria:	Type:
08-AUG-06	Federal	Specifications	Process
Instrument Type:	**Test / Method:**	**Matrix Type:**	**Client Code:**
GC/ECD	SW846 8082	Solid	GCAL
Batch ID:	**Sample Numbers:**		
550771	See Below		

Potentially affected work order(s)(SDG): 167604(167603-1)

Application Issues:

Failed Recovery for MS/PS

Failed RPD for MS/MSD, or PS/PSD

Failed Yield for Surrogates

Specification and Requirements Nonconformance Description:	NRG Disposition:
1. Failed Recovery for MS/MSD: QC 1201141681MS 2. Failed RPD for MS/MSD: QC 1201141682MSD 3. Failed Yield for Surrogates: 167604 016,018	1. The MS recoveries for this SDG were not within the acceptance limits. The failures confirm in the MSD and are attributed to matrix interference. 2. The relative percent differences (RPD) between each MS and MSD were not within the required acceptance limits. 3. Sample 167604018 was reextracted due to surrogate failure. Sample 167604016 did not meet acceptance criteria for surrogate recovery due to dilution.

Originator's Name:
Khoung Yib 08-AUG-06

Data Validator/Group Leader:
Jared Wagner 09-AUG-06

COMMENTS

* The soil boring (SB) samples have been grouped by sampling event (i.e., samples that were collected, shipped, and received at the same time) for the data validation. There are three distinct SB events: (1) First event - the three work orders received on 7/19/06 (206071914, 206071915, 206071916); (2) Second event – the four work orders received on 7/20/06 (206072006, 206072012, 206072019, 206072021); and (3) Third event – the three work orders received on 7/21/06 (206072106, 206072107, 206072109)

Level IV Check - GC/MS RRF for instrument calibration also included in Level III checks after deficiencies noted in first samples – see attached for deficiencies noted

Level IV Check – Verification of results against quant report for all samples with all NDs for a given multi-analyte parameter also included in Level III checks after error noted in work order 206071914 – no deficiencies found

1. Lab did not sign page 2 or 4 (no. 001117 and 001110) for work order 206072019.

2. Eight trip blanks do not have Collection Date on Chain and nine do not in EDD.

4. Only 4 field dups collected for 96 VOC soil samples (10 field dups collected for 197 total soil samples but less than half from >0.5 ft samples, for which VOC was analyzed). This is not considered to affect data quality.

10. Issues noted for all parameters. All are based on laboratory limits, which do not affect flagging for this site, except:

206072006

VOC – MeCl2 in LB and no lab MS/MSD for batch 328555 (field blanks only); MeCl2 in LB and no lab MS/MSD for batch 328554 due to insufficient sample, LCS/D reported (site MS/MSD used to assess quality, see comment no. 34); MeCl2 in LB for batch 328585; Acetone, MeCl2, 2-Butanone, Styrene in LB for batch 328605

SVOC – MS/MSD rec = 0% for Pyridine in batch 328467 (field blanks only), bis(2eh)phthalate in LB for batch 328412

PEST - RT window originally set too wide, hardcopy revisions and revised EDD (version V1 on 9/18/06) submitted for results for 6 samples and the MS/MSD. (Note: EDD revised and submitted on 11/3/06 with 'rev' suffix because the 9/18/06 version did not contain all records for one of the MS/MSD.)

AROCLORS – revised values reported for sample SC2SB26-052-(1-2). Aroclor 1254 was found present in this sample and the resubmitted results are in work order 206112030 (EDD submitted on 11/20/06) along with resubmitted results for three other SB samples. These changes are the results of a review of all SW-846 8082 analysis for the Gulfco site. (see Note below)

206072012

VOC – MeCl2/Naph. in LB for batch 328626

SVOC – bis(2eh)phthalate in LB for batch 328426 and 429, no MS/MSD for lab batch 328472 due to insufficient sample; Form 1 and raw data for sample 20 not in data package, submitted as additions on 11/6/06.

PEST - RT window originally set too wide, hardcopy revisions and revised EDD (version V1 on 9/18/06) submitted for results for 15 samples and the MS/MSD; RPD between columns > 40 for one or more Pests in seven samples, higher results reported unless co-elution suspected

206072019

VOC – no lab MS/MSD for batch 328554, LCS/D reported; no lab MS/MSD for batch 328590, LCS/D reported

PEST - RT window originally set too wide, hardcopy revisions and revised EDD (version V1 on 9/18/06) submitted for results for 12 samples and the MS/MSD

COMMENTS (continued)

206072021

VOC – no lab MS/MSD for batch 328721 due to IS failure in parent sample; no lab MS/MSD for batch 328626 or 590, LCS/D reported

PEST - RT window originally set too wide, hardcopy revisions and revised EDD (version V1 on 9/18/06) submitted for results for 12 samples and the MS/MSD

AROCLORS – revised values reported for samples SC6SB30-060-(1-2) and SD4SB34-068-(1-2). Aroclor 1254 was found present in these samples and the resubmitted results are in work order 206112030 (EDD submitted on 11/20/06) along with resubmitted results for three other SB samples. These changes are the results of a review of all SW-846 8082 analysis for the Gulfco site. (see Note below)

ADDITIONAL NOTE ON AROCLORS: Based on a review of the Aroclor analyses and the PCB-Congener analyses, the validator requested that the laboratory re-examine data for two Aroclor samples with all non-detects (both in work order 206072021). The laboratory (GCAL) determined that Aroclor-1254 was actually present in the samples and that apparently the original results were reported after loading the incorrect list (i.e., the Pesticide list, which is processed on the same injection, instead of the Aroclor list) into the instrument data system. As a result, GCAL completed a review of all Aroclor analyses (including every sample for every media) for the Gulfco site and revised results were submitted in a new work order (206112030) for four samples (one from work order 206071915, one from work order 206072012 and the two from work order 206072021). Details of the laboratory review are contained in a letter submitted by GCAL.

11. 206072006 – One VOC sample diluted due to sample matrix, one due to high level of Isopropylbenzene – still above calibration range (flagged with Validation Qualifier = J); Four SVOCs diluted due to non-target background, SUs diluted out for 10x or higher; Three Pest/Aros diluted to reduce interference, SUs diluted out; Five metals diluted to bracket conc in linear range.
20607012 – Two VOCs diluted due to sample matrix; Nine SVOC diluted due to non-target background; One Pest/Aro diluted to bracket conc in range, SUs diluted out; Five Pest/Aro diluted due to non-target background, SUs diluted out for 10x or higher; Four metals diluted to bracket in calib range, three metals diluted due to chemical or physical interference.
20607019 – One VOC diluted to bracket in calib range; Four SVOC diluted due to non-target background, SUs diluted out; Three Pest and Four Aro diluted to bracket in calibr range; Two Pests and one Aro diluted due to non-target background; Two Hg samples diluted to bracket in calibr range; Four metals diluted to bracket in calib range, two diluted due to chemical or physical interference;
206072021 – One VOC diluted to bracket in calib range, One VOC due to sample matrix; Five SVOCs diluted due to non-target background, SUs diluted out; Six metals diluted due to chem/phys interference

25. 206072006 – Four metals samples diluted for Zn only (2-10x), one for all metals (2x); Three Pest/Aroclor samples diluted 10x; One VOC diluted for isopropylbenzene only (50x), one for all VOCs (50x); Five SVOC samples diluted 5-20x

206072012 - Four metals samples diluted for Zn only (2-5x), three for all metals (2-5x); Five samples diluted for Pest/Aro (5-10x); Nine SVOC samples diluted (2-10x); two VOCs as med level for all TAs

206072019 - Four metals samples diluted for Zn only (2-10x), two for all metals (2-5x) plus two for Hg (2x); Five samples diluted for Pest/Aro (5-20x); Four SVOC samples diluted (10x); one VOCs diluted for 3 TAs (50x)

206072021 - Six metals samples diluted for all metals (2-5x); Two samples diluted for Pest/Aro (10x); Five SVOC samples diluted (5-10x); two VOCs samples diluted (50-500x)

28. All soils logged in before 7/31/06, and thus organics are reported in ug/L (blanks) and ug/kg (soils) and inorganics are reported in mg/L and mg/kg EXCEPT samples 20607201904, 20607202108, 20607202109, 20607202110, 20607202113, and 20607202114 for Pest/Aroclors and sample 20607202115 for Pests only (and accompanying QC), which were analyzed after 7/31/06 and thus have Results, SDLs, and SQLs that are in mg/kg. The user should note that the MDLs and MQLs are in ug/L and this is not accounted for in the Prep Factor or Dilution Factor. Additionally, the revised Aroclor Results, SDLs, and SQLs for samples SC2SB26-052-(1-2), SC6SB30-060-(1-2) and SD4SB34-068-(1-2) in work order 206112030 are in mg/kg.

COMMENTS (continued)

Four records in EDD (Endrin aldehyde and 4,4'-DDT for sample SB-502-(0-0.5), Endosulfan I for sample SJ1SB77-153-(0-0.5), Lindane for sample SG6SB59-118-(1-2)) have incorrect entry for Laboratory_Qualifiers. The reviewer confirmed correct entry in hardcopy and added to EDD in {}.

32. All analytes routinely spiked by lab are included as per QAPP. This is every TA except n-Butyl alcohol, Toxaphene, and the 5 middle Aroclors.

34. Only MS/MSD prepared using a sample of the same media (i.e., GW, ICWW SW, Pond SW, ICWW Sediment, OnSite Sediment, or Soil Borings) that are part of the same event (i.e., collected, shipped, and received at the same time) were used to assess data quality for a given set of samples. There are three sampling events for the Soil Borings and more than one MS/MSD per event. The validator chose the best MS/MSD to assess the data quality for a given sample by selecting the one with the most similarities per the following order:

Media/Event; Site Area (North or South of Marlin); Prep Batch; Level (VOC soils); Work Order; Grid Coordinate

Similarly, Field duplicates were chosen per following order:

Media/Event; Site Area; Work Order; Sample Depth

All trip blanks (which are all very similar generally only containing Methylene chloride) in the same Work Order were used to assess data quality for a given set of samples and all field/equipment blanks collected during the same event on the same date.

40. Completeness for all soil borings will be calculated and presented in the checklist for the third SB sampling event.

SET SUMMARY
Laboratory Job No.: 206072006, 206072012, 206072019, 206072021
plus Aroclor records for SC2SB26-052-(1-2), SC6SB30-060-(1-2) and SD4SB34-068-(1-2) in 206112030

81	Number of Field Samples including Field Duplicates (3)
4	Number of Field MS/MSD Pairs
0	Number of Equipment Rinsate Blanks
2	Number of Field Blanks
9	Number of VOC Trip Blanks
5	Number of Parameters (VOC, SVOC, Pesticides, Aroclors, Metals)
198	Number of Target Analytes per Sample
12370	Total Measurements for Field Samples (VOC only on 38 subsurface samples, only PCB on 4 samples, original and revised Aroclor results for 3 samples)
8161	Number of measurements with no validation qualifier (i.e., “none” in EDD)
2367	Number of measurements with UJ flag (for various analytes due to low laboratory spike, matrix spike and/or surrogate spike recovery; poor field precision between low-level values; poor calibration fit and/or negative drift)
127	Number of measurements with UJ flag and an elevated SDL (for 2,4-Dinitrophenol, 4,6-Dinitro-2-methylphenol, Acrolein, Aniline, Benzaldehyde, Chloroethane, n-Butyl alcohol, and n-Nitrosodimethylamine due to poor instrument response, i.e., low RRF)
48	Number of measurements with J- flag (for six Antimony detects due to extremely low matrix spike recovery plus various other analytes due to low laboratory spike, matrix spike and/or surrogate spike recovery; and/or negative calibration drift)
656	Number of measurements with J flag (due solely to result being between the SDL and SQL)
3	Number of measurements with J flag (due solely to result being above the calibration range)
754	Number of measurements with J flag (due to result being between the SDL and SQL plus extremely low matrix spike recovery for two Antimony detects or plus other various QC deficiencies for other analytes)
7	Number of measurements with J+ flag (for Isopropylbenzene (Cumene), n-Butyl alcohol, Aroclor-1254, Endosulfan I, and Dieldrin due to high matrix spike recovery, high surrogate spike recovery and/or positive calibration drift)
162	Number of measurements with U flag (due to blank contamination; analytes affected include 2-Butanone Acetone, Acetophenone, Benzo(g,h,i)perylene, Bis(2-Ethylhexyl)phthalate, Boron, Diethyl phthalate, Mercury, Methylene chloride, Naphthalene, and Silver)
21	Number of measurements with NS flag (for original Aroclor results for samples SC2SB26-052-(1-2), SC6SB30-060-(1-2) and SD4SB34-068-(1-2))
64	Number of measurements with R flag (for twenty-six non-detects for 2-Chloroethylvinyl ether due to extremely low MS/MSD recovery (0%) and thirty-eight non-detects for Antimony due to extremely low MS/MSD recovery (8-22.5%)

Usability: All data suitable as qualified for the intended use except for the 26 results for 2-Chloroethylvinyl ether and 38 results for Antimony. Data for 2,4-Dinitrophenol, 4,6-Dinitro-2-methylphenol, Acrolein, Aniline, Benzaldehyde, Chloroethane, n-Butyl alcohol, and n-Nitrosodimethylamine are usable with an elevated reporting limit for the non-detects (as given in the Electronic Data Deliverable). Measurements qualified with a U-flag should be considered not present at the concentration reported.

For Volatile Organics, the MS/MSD prepared using sample SF3SB45-090-(1-2) had 0% recovery for 2-Chloroethylvinyl ether. Extremely low recovery for organic MS/MSD does not require rejection of data. However, since the associated samples are considered to be of very similar matrix and there was no recovery in either the MS or MSD, the validator qualified all non-detects for 2-Chloroethylvinyl ether in the associated samples as rejected (R). This MS/MSD pair also has a high RPD (>40%) for forty-four of the target analytes, but the average recovery passes for all but four target analytes. This is due to the fact that the MS and MSD were prepared using different sample amounts and thus were spiked at different levels. (The RPD is calculated on the measured value.) Most of the affected analytes were not detected in the associated samples and thus minimal flagging resulted. Note that all individual recoveries (except for Acetone, for which the check was waived due to a high concentration in the parent sample and 2-Chloroethylvinyl ether, for which the recovery was 0% as noted above) in both the MS and MSD are 25% or greater, with most in the 60-140% range.

QUALIFIED DATA TABLE

Field Sample Identification	Analyte	Data Qualifier	Reason for Qualification
SB2SB22-043-(0-0.5)	Aluminum	J	poor field precision (55 RPD)
SB2SB22-043-(0-0.5)	Antimony	UJ	low ave MS/MSD recovery (41.5%)
SB2SB22-043-(0-0.5)	Beryllium	J	result is between SDL and SQL
SB2SB22-043-(0-0.5)	Iron	J	poor MS/MSD precision (53 RPD)

CASE NARRATIVE

Client: Pastor, Behling, & Wheeler **Report:** 206072006

Gulf Coast Analytical Laboratories received and analyzed the sample(s) listed on the sample cross-reference page of this report. Receipt of the sample(s) is documented by the attached chain of custody. This applies only to the sample(s) listed in this report. No sample integrity or quality control exceptions were identified unless noted below.

VOLATILES MASS SPECTROMETRY

In the SW-846 8260B analysis, samples 20607200611 (SF4SB46-092-(1-2)) and 20607200612 (SG4SB56-112-(1-2)) had to be diluted to due to the sample matrix. The dilutions are reflected in the elevated detection limits. The concentration of Isopropylbenzene exceeded the upper calibration range of the instrument in the diluted analysis of sample 20607200611 (SF4SB46-092-(1-2)). The sample was not analyzed at a lower dilution and therefore this compound is flagged as estimated.

In the SW-846 8260B analysis, the recovery for the surrogate, Toluene-8 was above the upper control limit for samples 20607200602 (SF3SB45-090-(1-2)) and 20607200617 (SH5SB66-132-(1-2)). All other surrogate recoveries were acceptable for these samples.

In the SW-846 8260B analysis for analytical batch 328555, no MS/MSD was performed because the only samples in the batch were trip and field blanks. The LCS recoveries were outside control limits for 1,1,2,2-Trichloroethane, 1,2-Dibromo-3-chloropropane, and Chloroethane. All other batch QC was acceptable. Methylene chloride was detected at an estimated concentration in the method blank. This is probable laboratory contamination.

In the SW-846 8260B analysis for analytical batch 328554, no MS/MSD was performed due to insufficient sample volume. The LCS and/or LCSD recoveries were outside control limits for 1,1,2,2-Trichloroethane, Dibromochloromethane, Styrene, and 2-Chloroethylvinyl ether. The LCS/LCSD RPDs were above the control limits for 1,2-Dibromo-3-chloropropane, 2-Butanone, 4-Methyl-2-pentanone, 2-Hexanone, and Acrylonitrile. Methylene chloride was detected at an estimated concentration in the method blank. This is probable laboratory contamination.

In the SW-846 8260B analysis for analytical batch 328585, the MS/MSD exhibited sporadic recovery and RPD failures. The MS/MSD and LCS/LCSD recoveries were outside control limits for 2-Chloroethylvinyl ether. All other LCS/LCSD recoveries and RPDs were acceptable. Methylene chloride was detected at an estimated concentration in the method blank. This is probable laboratory contamination.

In the SW-846 8260B analysis for analytical batch 328605, the MS/MSD exhibited numerous recovery and RPD failures. These failures may be attributed to the sample matrix. The LCS/LCSD recoveries for 2-Chloroethyl Vinyl ether and Styrene were outside the control limits. The LCS/LCSD RPDs were above the control limits for

187974

Bromomethane and Methyl acetate. All other LCS/LCSD recoveries and RPDs were acceptable. Acetone, Methylene chloride, 2-Butanone, and Styrene were detected at an estimated concentration in the method blank. This is probable laboratory contamination.

In the SW-846 8260B analysis for analytical batch 328954, the MS/MSD exhibited sporadic recovery failures and RPD failures. The LCS/LCSD recoveries for Chloroethane were above the upper control limit. This compound was not detected in the associated samples.

In the SW-846 8260B analysis, the recoveries for Dichlorodifluoromethane, Methyl Acetate, trans-1,4-Dichloro-2-butene, and 1,2-Dibromo-3-chloropropane were outside the control limits in the ICV (MSV4, 07/18/06).

In the SW-846 8260B analysis, %D/%Drift was outside ±30% for 2-Chloroethylvinyl ether and Tetrachloroethene in the CCV (MSV4, 07/22/06).

In the SW-846 8260B analysis, %D/%Drift was outside ±30% for Chloromethane, Bromomethane, 2-Chloroethylvinyl ether, Tetrachloroethene, and Styrene in the CCV (MSV4, 07/23/06).

In the SW-846 8260B analysis, the recoveries for Chloroethane, Trichlorofluoromethane, 2-Chloroethylvinyl ether, and Naphthalene were outside the control limits in the ICV (MSV5, 07/19/06).

In the SW-846 8260B analysis, %D/%Drift was outside ±30% for Chloroethane, Methyl iodide, 4-Methyl-2-pentanone, 2-Hexanone, 1,1,2,2-Tetrachloroethane, and 1,2-Dibromo-3-chloropropane in the CCV (MSV5, 07/21/06).

In the SW-846 8260B analysis, %D/%Drift for Chloroethane and 2-Chloroethylvinyl ether was outside ±30% in the CCV (MSV5, 07/27/06).

SEMI-VOLATILES MASS SPECTROMETRY

In the SW-846 8270C analysis of samples 20607200602 (SF3SB45-090-(1-2)), 20607200603 (SF3SB45-090-(1-2)MS)), 20607200604 (SF3SB45-090-(1-2)MSD)), 20607200609 (SF4SB46-091-(0-0.5)), 20607200611 (SF4SB46-092-(1-2)) and 20607200612 (SG4SB56-112-(1-2)) required a dilution prior to analysis due to the presence of non-target background. This dilution is reflected in elevated detection limits. The recovery for the surrogates is reported as "D" ,(diluted out) for those samples analyzed at a 10 or higher dilution.

In the SW-846 8270C analysis, samples 20607200604 (SF3SB45-090-(1-2)MSD)), 20607200607 (SH4SB64-128-(1-2)), 20607200615 (SE3SB39-078-(1-2)), and 20607200617 (SH5SB66-132-(1-2)) had one surrogate recovery outside of control limits in the acid fraction. All other surrogate recoveries were acceptable for these samples.

In the SW-846 8270C analysis for prep batch 328467, the MS/MSD recoveries are not

187975

applicable for 2,4-Dinitrotoluene due to the high concentration of this compound in the spiked sample. The MS/MSD recoveries for Pyridine were 0%. This is attributed to matrix interference. The LCS/LCSD recoveries were outside the control limits for Benzidine and Benzaldehyde. All other LCS/LCSD recoveries and RPDs were acceptable.

In the SW-846 8270C analysis for prep batch 328412, the MS/MSD exhibited recovery and RPD failures. The LCS and/or LCSD recoveries were outside control limits for Benzidine, Hexachloroethane, 2-Nitrophenol and Benzaldehyde. All other LCS/LCSD recoveries were acceptable. Bis(2-ethylhexyl)phthalate was detected at an estimated concentration in the method blank. This is probable laboratory contamination.

In the SW-846 8270C analysis, the %D/%Drift was outside ±30% for Benzidine and Benzaldehyde in the CCV (MSSV3, 07/23/06;07/24/06).

SEMI-VOLATILES GAS CHROMATOGRAPHY

In the SW-846 8081A and 8082 analyses, samples 20607200611 (SF4SB46-092-(1-2)), 20607200612 (SG4SB56-112-(1-2)), and 20607200615 (SE3SB39-078-(1-2)) required a dilution prior to analysis to eliminate the interference of non-target background. This dilution is reflected in elevated detection limits. The recoveries for the surrogates are reported as "D" (diluted out).

In the SW-846 8081A analysis, the recovery for the surrogate, Decachlorobiphenyl was above the upper control limit for sample 20607200603 (SF3SB45-090-(1-2)MS)).

In the SW-846 8081A analysis for prep batch 328410, the MS/MSD exhibited recovery and RPD failures. These recoveries were within limits in the LCS and/or LCSD. This is attributed to matrix interference.

In the SW-846 8082 analysis for prep batch 328411, the MS/MSD exhibited sporadic recovery failures. These recoveries were within limits in the LCS and/or LCSD. This is attributed to matrix interference.

METALS

In the SW-846 6010B analysis, samples 20607200605 (SI5SB74-147-(0-0.5)), 20607200602 (SF3SB45-090-(1-2)), 20607200608 (SH4SB64-127-(0-0.5)), 20607200614 (SE3SB39-077-(0-0.5)) and 20607200616 (SH5SB66-131-(0-0.5)) had to be diluted in order to bracket the concentrations within the linear dynamic range of the instrument. This is reflected in elevated detection limits.

In the SW-846 6010B analysis for prep batch 328499, the MS and/or MSD recoveries were outside the control limits for Antimony, Boron, Chromium, Molybdenum and Titanium. The LCS recovery was within control limits. This indicates the analysis is in control and the sample is affected by matrix interference. A post-digestion spike was performed on the QC sample for this batch with recoveries of 110% for Antimony, 90%

187976

for Boron, 92% for Chromium, 107% for Molybdenum and 88% for Titanium. The MS/MSD recoveries and RPDs and post-digestion spike recoveries are not applicable for Aluminum, Barium, Iron, Lead, Manganese and Zinc because the sample concentration is greater than four times the spike concentration.

187977

Laboratory Endorsement

Sample analysis was performed in accordance with approved methodologies provided by the Environmental Protection Agency or other recognized agencies. The samples and their corresponding extracts will be maintained for a period of 30 days unless otherwise arranged. Following this retention period the samples will be disposed in accordance with GCAL's Standard Operating Procedures.

Common Abbreviations Utilized in this Report

ND	Indicates the result was Not Detected at the specified RDL
DO	Indicates the result was Diluted Out
MI	Indicates the result was subject to Matrix Interference
TNTC	Indicates the result was Too Numerous To Count
SUBC	Indicates the analysis was Sub-Contracted
FLD	Indicates the analysis was performed in the Field
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
RDL	Reporting Detection Limit
00:00	Reported as a time equivalent to 12:00 AM

Reporting Flags Utilized in this Report

J	Indicates an estimated value
U	Indicates the compound was analyzed for but not detected
B	(ORGANICS) Indicates the analyte was detected in the associated Method Blank
B	(INORGANICS) Indicates the result is between the RDL and MDL

Sample receipt at GCAL is documented through the attached chain of custody. In accordance with ISO Guide 25 and NELAC, this report shall be reproduced only in full and with the written permission of GCAL. The results contained within this report relate only to the samples reported. The documented results are presented within this report.

This report pertains only to the samples listed in the Report Sample Summary and should be retained as a permanent record thereof. The results contained within this report are intended for the use of the client. Any unauthorized use of the information contained in this report is prohibited.

I certify that this data package is in compliance with the terms and conditions of the contract and Statement of Work both technically and for completeness, for other than the conditions in the case narrative. Release of the data contained in this hardcopy data package and in the computer-readable data submitted has been authorized by the Quality Assurance Manager or his/her designee, as verified by the following signature.

Method : /var/chem/msv4.i/2060722q.s.b/8260Bs4.m
Meth Date : 22-Jul-2006 16:52 rss Quant Type: ISTD
Cal Date : 18-JUL-2006 11:26 Cal File: v4302.d
Als bottle: 15
Dil Factor: 1.00000
Integrator: HP RTE Compound Sublist: 8260b+nbutyl-ol.sub
Target Version: 3.50
Processing Host: org.gcal.com

Concentration Formula: Amt * DF * (Uf/Ws)/((100-M)/100) * CpndVariable

Name	Value	Description
DF	1.00000	Dilution Factor
Uf	5.00000	ng unit correction factor
M	0.00000	% Moisture (not decanted)
Va	100.00000	Volume of aliquot extract added (uL)
Ws	6.85000	Weight of sample extracted (g)

QC Flag Legend

a - Target compound detected but, quantitated amount
    Below Limit Of Quantitation(BLOQ).
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

QC Flag Legend

A - Target compound detected but, quantitated amount exceeded maximum amount.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

QC Flag Legend

A - Target compound detected but, quantitated amount exceeded maximum amount.
R - Spike/Surrogate failed recovery limits.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

QC Flag Legend

A - Target compound detected but, quantitated amount exceeded maximum amount.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

QC Flag Legend

A - Target compound detected but, quantitated amount exceeded maximum amount.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

QC Flag Legend

A - Target compound detected but, quantitated amount exceeded maximum amount.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.

QC Flag Legend

A - Target compound detected but, quantitated amount exceeded maximum amount.
R - Spike/Surrogate failed recovery limits.
M - Compound response manually integrated.

QC Flag Legend

A - Target compound detected but, quantitated amount exceeded maximum amount.
M - Compound response manually integrated.
H - Operator selected an alternate compound hit.
