Thanks Avi for your and Water Gen's interest in collaborating.

Are you thinking in terms of developing a CRADA, loaning, or selling us a Spring unit? Of course, each approach requires its own paperwork!

Typically, we evaluate a technology at our Test & Evaluation Facility and if successful, deploy it to our Water Security Test Bed where it can be evaluated under real-world conditions, so we would only need one unit. If a loaned or purchased unit is being evaluated, if we all agree there may be new IP to be developed, we can always develop a CRADA at that point.

Looking forward to collaborating,

Jim

Dear Jim,

Could you please let me know how many Springs you wish to have for the series of field tests?

Thank you,

Avi

Dear Avi,

Thank you for the time you spent discussing your technologies with Vince and me. Feel free to send me any information or contact me directly.

Regards,
Jim

Dear Mr. Goodrich,

Thank you for visiting us at the EPA facility.
It was a pleasure for me to present and explain about our products- the "spring" - A portable water treatment. And the "AWG 350"- The atmospheric water generator unit.

I'm corresponding to this mail our company management in the US:
Mr. kaplon-our president
and Mr. russo- our CEO.

Next week We will send the material you asked for.

We are looking forward and will be happy to work with you.

With best regards,
~~~~~~~~~~~~~~~~~~~~
