Subject: Eisenbarth TTPC Analysis Discussion

Mr. Justice,

Thank you for previously sharing TTPC analytical method information.

Our technical staff at CTEH have completed their review of this first submission and wish to participate in technical discussion with the appropriate EPA or EPA contractor staff.

The following are proposed topics:

- General information about extraction procedures
- Did they use direct injection method (ex. using 6460 instrument and no extraction required)
- Calibration summary data (or find range of which they are reporting)
- Determine if they use second source for validating method. If so, what standard
- General info about their method development. Hopefully, they will give us a copy of their SOP.
- Discuss holding time criteria (if they have a target date)
- Discuss if MDL or additional validation steps have been performed
- How are they storing samples? Are they retaining extracts?

Could you please advise on any of your thoughts regarding this technical discussion and, if you consent, provide a technical contact for coordination?

For expediency, please reply to the parties on the Cc line in your reply.

Thank you.

Best regards,

Joe Swearman
