U.S. EPA - R3 WW disposal via treatment facility w or wo discharge_OH.xlsx

---

Folks:
Attached is my corrections to the U.S. EPA Region 3 excel spreadsheet. Only the Patriot facility is permitted to accept oilfield fluid wastes for disposal. All of the other fluid disposal facilitates are Class II saltwater disposal wells regulated under Ohio DNR, Division of Oil and Gas Resources Management (DOGRM) under the primacy agreement with U.S. EPA, Region V since 1983. The other two facilities listed are solid waste facilities accepting oilfield solids regulated under Ohio EPA's program.
Thanks,

Tom Tomastik, Geologist 4

Mr. Tomastik,
I left you a voice mail regarding the message below from USEPA about Ohio Oil and Gas facilities. Since Ohio EPA does not authorize surface water discharges, with the exception of the Patriot facility in Warren, Ohio DNR may be better able to respond to the questions below. Would you be able to help out Ms. McKim with her request?
Thanks

Fred Snell

Subject: CWTs in OH accepting HF wastewater

Donna and Fred,
As you may know, EPA is developing ELG's for the "non conventional oil and gas industry". As part of this effort, we are looking for information regarding existing discharges related to this industry.

I have attached a short list of facilities that have been identified as accepting wastewater from HF drilling operations. We think they are recycling the wastewater, but are wondering if you are able to confirm this. We looked in ICIS and didn't find any record of these facilities there. Do you have a database of pretreatment facilities that you can search and let me know if any of these facilities are listed in there? If they are can you forward any relevant information that you have? If you have any other sources of information on these facilities, or others, that are accepting HF wastewater, can you let me know?

Thank you very much,

Krista
