Hi Kristen,

Let's set up a date and time to talk about the site and your recent findings. I agree that the results are a concern.

Please let me know what dates and times are good for you over the next week or so. I would like my supervisor to attend also, so I will coordinate with her.

Regards,

Bob

Subject: continued request for assistance, Haskell Lake petroleum contamination

Good Afternoon Mr. Egan,

Thank you for your onsite review and help to date with the Haskell Lake Petroleum Problem. We have just received some new concerning results from recent December sampling. We are hoping to reengage your assistance and the LUST program for this site.

In December, 2013 VAS sampling was completed at VAS11 and VAS 8 to analytically confirm and characterize previous field indications (Tables and figures attached). At the boring near the lakeshore, benzene concentrations were as high as 1200 ppb. A second boring ~270 feet from Haskell Lake yielded benzene concentrations as high as 9100ppb. Also present was lead, cadmium, naphthalene, ethylbenzene, toluene, TMBs, xylenes, and 11 dibromoethane. The area is served by private wells and these wells are screened at similar depths to that of the elevated benzene concentrations.

I look forward to working with you,

Kristen Hanson

That's great news, Kristen. I am eager to hear of the results.

In the meantime, I'll try to set up a call with WDNR so I can ask them about reopening the case.

Good Morning Bob,

Thank you for the email. The closest downgradient well will be sampled on Saturday. Sample results other wells have not come back yet. I expect them in a week or two.

Kristen

Subject: Tower site

Hi Kristen,

I apologize for the long delay in getting back to you. However, I have not heard much from WDNR regarding the site or the possibility of reopening the case.

I was at a meeting with the States on UST/LUST issues and talked to the person in charge of LUST issues at WDNR about the Tower site. He said that they do reopen several cases every year, so it seems very possible that they could do it for this site. I plan to talk to him and the Northern Region supervisor in the near future so we can see if this can be moved forward.

Have you had a chance to get back out to that home on Haskell Lake to see if anyone is there? It would be nice to get a drinking water sample from that home.

Hope you are having a good summer.

Regards,
Bob
