SUBJECT: Preliminary Assessment Under the Environmental Priorities Initiative for A. B. Chance Site, Houston, Harris County, TX (TXD079417515)

I. Site Information

A. B. Chance Company and its predecessor, Universal Pole Bracket Corporation, operated a 33 acre metal fabrication facility from 1957 to 1983 in a commercial/industrial area at 12317 Almeda Road, Houston, Texas 77045 (Figure 1). The geographic coordinates are 29°37'5" north latitude and 95°24'36" west longitude (Ref. 2, p. 7). The facility is inactive and can be seen from Almeda Road (Photograph #10). It was owned and operated by A. B. Chance Company of Centralia, Missouri, who purchased it from Universal Pole and Bracket Company in January 1968 (Ref. 2, Deed Attachment). In March 1982, A. B. Chance sold the site to Houston Export Crating Company (Ref. 8, p. 2).

The purpose of this investigation is to perform a Preliminary Assessment (PA) of the A. B. Chance Company under the Environmental Priorities Initiative (EPI) of the Environmental Protection Agency (EPA).

II. Background/Operating History

PRELIMINARY REPORT
This does not constitute final opinion of EPA

A. Site History

A. B. Chance Company began operations in 1957. As part of the steel fabrication process, the company operated a hot dip galvanizing facility. Spent pickle liquors from the galvanizing dip tanks were collected in a clay-lined pit on the plant premises prior to off-site disposal. The pit was closed under the direction of the Texas Water Quality Board (TWQB) in July 1975. At that time, a second pond was installed with a synthetic liner to improve the on-site pickle liquor

storage facilities Disposal of the liquor waste was managed by Houston Industrial Environmental Control, Inc and transported by Chemline Company, which delivered the spent pickle liquor to the City of Houston's northside solid treatment plant for use in sewage treatment The waste storage lagoon was classified by the Texas Department of Water Resources (TDWR) as a Class I facility, because the spent pickle liquor is listed as a hazardous waste In 1980, A B Chance filed a Part A Permit Application, under Paragraph 261 32, for an industrial solid waste storage facility (Ref 8, p 1) On February 18, 1982, A B Chance notified the TDWR of its intent to cease operations and proposed a closure plan This plan included removal of residual pickle liquor and the synthetic liner from the pit, neutralization of acidic sludges from the bottom of the pit, backfilling to natural grade, and final approval of closure by the TDWR (Ref 1, p 2)

B Discussion of Known/Potential Problem(s)

The known contaminants are sulfuric acid, caustic liquids and sludges, lead, manganese, chromium and zinc (Ref 2, p 10, Ref 7) It is not known whether additional chemicals were used

There is no information in the files regarding monitoring wells or a monitoring well program at the facility Research Engineering, Inc (REI) advanced three soil borings using a rotary drill auger Two borings, B-1 and B-2, were drilled through the first water bearing stratum and were completed in an underlying clay (Ref 8, p 13) The water bearing stratum is a fine silt through which significant quantities of ground water are not likely to migrate Ground water samples from the open borings indicated only marginal drinking water quality and did not show significant contamination of the upper zone Because the borings were not cased and developed as true ground water monitoring wells, slight contamination from surface sediments is possible The subsurface hydrological gradient observed from water level measurements in the borings indicated that flow direction was to the south (Ref 8, p 13 and 14)

The FIT conducted an off-site reconnaissance inspection on April 27, 1989 There was no observed evidence of waste management facilities (Photographs #1) The site is secured and surrounded by a 10 foot chain link fence All gates were locked The closest residence is less than 0 5 miles from the site

RCRA, CERCLA and TWC files were reviewed for this Preliminary Assessment There have been no documented emergency actions performed at the site

C Regulatory Involvement

The A B Chance Company applied for a TWC Industrial Solid Waste Storage/Processing/Disposal Facility Permit in August, 1980 (Ref 2, p 5 The site was issued Permit #30491 for solid waste registration (Ref 2, p 3)

In March 1982, the facility completed negotiations to sell the site, with its improvements, to Houston Export Crating Company Provisions of the purchase agreement required removal of the galvanizing plant and closure of the pickle storage lagoon, in accordance with TDWR rules and regulations On February 18, 1982, A B Chance proposed a closure plan to the TDWR This plan included removal of residual pickle liquor and the synthetic liner from the pit, neutralization of acidic sludges from the bottom of the pit, backfilling of the pit to natural grade, and final approval of closure by the TDWR All underlying and surrounding soils contaminated with hazardous waste K062 (spent pickle liquor) were scheduled to be removed for disposal as part of the closure

A B Chance ceased operations on March 26, 1982 Susan Ripley, Field Representative of the TDWR, observed closure procedures from August 30 through 31 and September 3, 1982 Soil was removed from the acid pit until the approved decontamination levels for lead and chromium were reached Engineering consultants retained by A B Chance submitted a certification report to the executive director in September 1982 The area, which included a previously closed pit, was deed recorded as a Class I non-hazardous site On January 9, 1985, the TDWR inspected the facility and recommended that A B Chance Company's registration be canceled The cancellation was approved by the TWC (Ref 6) On December 19, 1978, the A B Chance galvanizing plant was inspected by the TDWR and was issued Citation # 3352 for unauthorized discharges from the spent acid holding pond into a flood control ditch and then into Sims Bayou The acidic wastes from the spent acid holding pond were discharging at the rate of 15 gallons per hour into a flood control drainage ditch less than 1,000 feet north of Sims Bayou Samples were analyzed for pH, manganese and zinc The discharges were non-compliant with Hazardous Metal Rule 156 19 15 001 009, due to excessive levels of zinc and manganese (Ref 7)

III Waste Containment/Hazardous Substance Identification

The following list summarizes the SWMUs that were identified at the facility

SWMU #1 Waste Storage Lagoon

SWMU #1 is a 33 by 60 foot galvanizing waste storage lagoon used for temporary storage of spent acid The lagoon had a synthetic liner (Ref 8, p 1) The acid in the lagoon came from two sulfuric acid process tanks and was diluted with water to a 15% concentration After three to four weeks of use for pickling the steel, the solution became contaminated with iron and was considered spent acid When the storage lagoon neared capacity, chemical trucks transported the spent acid to an off-site disposal facility (Ref 2, Attachments E and G)

SWMU #2 3,000 Gallon Storage Basin

SWMU #2 is a 3,000 gallon concrete, above-ground storage basin that was used to store uncontaminated sulfuric acid The dimensions of the concrete basin were 25 by 50 feet There was no indication of a liner

in the basin The basin stored the acid until it was dispensed through 2-inch PVC pipes to two sulfuric process tanks (Ref 2, Attachments E, F and G)

SWMU #3 Concrete Basin

SWMU #3 is a 50 x 80 foot concrete basin that was used to collect spillage of a water based enamel paint, spent pickling liquid and sludges It was also used to collect spills and rainfall runoff that collected in the building's sump system Collected liquids from the indoor basin were removed by vacuum tank trucks for off-site disposal (Ref 2, Attachments E, F and G, Ref 7)

SWMU #4 PVC Transfer Piping

SWMU #4 is the PVC transfer piping that dispenses uncontaminated sulfuric acid from the 3,000 gallon storage tank to two sulfuric process tanks (Ref 1, p 6, Ref 3, Attachment G)

SWMU #5 Container Storage Area

SWMU #5 is the open, inactive barrel storage area outside the process building A photograph (Ref 2, Attachment F, Photograph #3) reveals no liners, dikes or runoff control around the drum storage area (Ref 2, p 13)

SWMU #6 Unlined Pit

SWMU #6 is a 50 x 50 foot inactive, unlined pit This pit was replaced in July 1975 by SWMU #1 to improve the on-site pickle liquor storage facilities (Ref 8, p 1, Ref 2, Attachment E)

The potential for contaminant migration from the SWMUs to surface water exists The site is located adjacent to a storm water channel, which discharges into Sims Bayou approximately 1,000 feet downstream Drainage from Sims Bayou discharges into segment 1006 of the Houston Ship channel in the San Jacinto River basin (Ref 4, Ref 8, p 18) Ground water contamination is not a threat because soils in this area are characterized by Gulf Coast sediments with interbedded layers of clay, fine sand and silt of the Beaumont formation (Ref 8, Attachment #5) An air release is unlikely because the waste generated is not easily airborne

IV Pathway Characteristics

A Air Pathway Characteristics

The gaseous and particulate mobility potentials at this site are low Although the gas mobility potential of sulfuric acid is high, the wastes are no longer generated and the surface impoundments have been closed

B Ground Water Characteristics

The A B Chance site is located on the Beaumont formation, a deltaic nonmarine Pleistocene deposit This unit is a heterogeneous formation, characterized by interbedded layers of clay, fine sand and silt

The clay fraction is primarily composed of montmorillonite, illite, kaolonite and finely ground quartz The sands and silts, which vary in compactness from loose to dense, are composed of quartz, feldpars, large particles of kaolonite, caliche and occasionally hornblende (Ref 8, Attachment #5) Ground water is encountered from 70 to 90 feet below grade (Ref 9) The closest domestic well is approximately 2,000 feet east The screened interval for this well is from 77 to 85 feet below grade and the static water level was recorded at 10 feet below ground surface (Ref 9, Well 9) Producing ground water wells utilized in the area withdraw water from strata well below the silt zone evaluated in the soil borings The depth to the first water bearing zone is assumed to be 10 feet below surface (Ref 8, p 17)

Drinking water for this area is a mixture of surface water and ground water Surface water comes from Lake Houston, approximately 26 miles northeast of the site Ground water comes from the Houston water supply wells (Ref 11)

Nearly all of the ground water pumped in the Houston area is from wells screened in the Evangeline or Chicot aquifers, and many of the wells are screened in both aquifers In most of the Houston area, the Chicot aquifer consists of discontinuous layers of sand and clay of approximately equal thickness The aquifer can be separated into an upper and lower unit in some parts of Houston The upper unit, which is not an important source of water for most of the district, can be defined where the altitudes of the potentiometric surfaces differ from the lower and upper units The Evangeline aquifer, which is the major aquifer in the district, underlies the Chicot aquifer and consists of sand and clay layers that dip toward the Gulf of Mexico (Ref 14, p 4, 10 and 21)

The climate of Houston is characterized by mild winters and hot summers The mean annual net precipitation at Houston is estimated at minus 8 inches per year (Ref 3)

C Surface Water Characteristics

The site is located adjacent to a stormwater channel Drainage from the site enters this ditch (Photograph 2), which discharges into Sims Bayou, approximately 1,000 feet downstream The waters then flow into segment No 1006 of the Houston Ship Channel (Ref 8, p 17 and 18) The 15 mile downstream in-water segment terminates in the Houston Ship Channel (Ref 4) Surface water intakes along Buffalo Bayou are for industrial uses (Ref 11) There are no sensitive environments along this segment (Ref 4) Sims Bayou and Buffalo Bayou are used for limited recreation, such as canoeing and fishing (Ref 13)

The topography in the immediate vicinity of the site is relatively flat The upgradient surface area is estimated at 33 acres, the size of the site (Ref 4) The average annual stream flow of Buffalo Bayou is 59,405 cubic feet per second (cfs) for water year 1988 (Ref 12) The facility is not located in a floodplain (Ref 4)

D On-Site Pathway Characteristics

The possibility of direct exposure is remote The facility is secured by a 10 foot chain link fence All wastes have been removed and the site has been closed (Ref 6)

V Targets

A Air

The nearest residence is located approximately 1,050 feet west of the site Land is used in the surrounding area for residential, commercial and industrial purposes The population within a four mile radius of the site is 83,399 (Ref 5) There is no on-site resident population

B Ground Water

Most of the ground water pumped in the Houston area comes from wells screened in the Evangeline or Chicot aquifers Many of the wells are screened in both aquifers The public water supply in the area is provided by the Houston Public Works Water production office, which operates numerous wells throughout Houston The closest water supply well is located approximately five miles southwest of the site (Ref 1) The Houston water supply is a mixture of ground water and surface water (Ref 11) Private wells were identified within a four mile radius of the site These wells are used for domestic and industrial supplies (Ref 9) Private water wells within a 4 mile radius serve an estimated 55 residents (Ref 4, Ref 9, Ref 10) The remaining population within a 4 mile radius is served by the City of Houston (Ref 11)

C Surface Water

Sims Bayou and Buffalo Bayou are used for limited recreation Buffalo Bayou is reportedly used as a stormwater outlet There is no surface water withdrawn from Buffalo Bayou for public water supply or for irrigation uses in the City of Houston (Ref 11) There are no sensitive environments, critical habitats or endangered species along Buffalo Bayou or Sims Bayou (Ref 13)

D On-Site

The A B Chance Company is an inactive facility, secured by a 10 foot chain link fence The nearest residence is 1,050 feet to the west (Ref 4) A city park, and commercial and industrial areas are located less than one mile from the site (Ref 4)

VI Conclusions

The A B Chance Company, located in southwest Houston is an inactive facility which operated a steel fabrication and galvanizing service The company generated spent pickle liquor, classified as a hazardous waste under Paragraph 261 32 of RCRA The company was issued a citation for unauthorized discharge from a spent acid holding pond The acidic wastes from the holding pond were discharged at a recorded rate of 15 gallons per hour into a flood control ditch This discharge of manganese and zinc was not in compliance with the Hazardous Metal Rule In February 1982, A B Chance submitted a closure plan In March 1982, the TDWR canceled the company's registration and the facility was deed recorded as a Class I non-hazardous site Information regarding ground water contamination is lacking, though evidence of an observed release to ground water and migration of contaminants from the site to the ground water is unlikely Although surface water contamination was recorded in December 1978, there are limited surface water targets The site has been closed and remediated, decreasing the on-site exposure and air migration potential

PHASE II FIELD TESTING PROJECT

PA QUESTIONNAIRE

INSTRUCTIONS

The purpose of this Questionnaire is to identify those data items which have the greatest impact on the potential for a site to score and that should be collected during a preliminary assessment (PA) in support of the revised Hazard Ranking System (rHRS) for Phase II of the Field Testing Project

You are not expected to have hard" data for all of the information identified on the questionnaire However within the average time constraints of a PA you should try to obtain as much HRS/PRESCORE related information as possible Where site specific hard information is not available best estimates based on professional judgment are encouraged Use of online databases is also highly recommended

When completing the Questionnaire keep in mind that this document will ultimately serve two distinct purposes (1) The Questionnaire is a form on which to document data collected during the PA and (2) The Questionnaire provides a "documentation" record on which to justify values assigned during PRESCORE Therefore it is important to record all major assumptions or estimates that were made during PRESCORE when there is little or no "hard" data to evaluate a revised HRS category For example there may be very little data available to identify which aquifer is used for drinking water in the vicinity of the site In that case it may be reasonable to assume all aquifers are interconnected and count all wells within four miles of the site when calculating a projected HRS score These types of assumptions must be recorded on this Questionnaire

In completing this Questionnaire the list of questions on page 2 should be answered first to identify situations that could potentially have a significant effect on the PRESCORE evaluation for that site If the response to any of the questions is yes information to support that data item should be gathered and recorded on this Questionnaire Also you are not limited to the space provided Use additional sheets if needed and attach them to the Questionnaire

MAJOR CONSIDERATIONS

A) DOES ANY QUALITATIVE OR QUANTITATIVE INFORMATION EXIST THAT MAY INDICATE AN OBSERVED RELEASE TO AIR GROUND WATER SOIL OR SURFACE WATER? NO

Describe

B) IF THE ANSWER TO #1 IS YES IS THERE EVIDENCE OF DRINKING WATER SUPPLY CONTAMINATION OR ANY OTHER TARGET CONTAMINATION (i e foodchain recreation areas or sensitive environments)?

Describe

C) ARE THERE SENSITIVE ENVIRONMENTS WITHIN A 4 MILE RADIUS OR 15 DOWNSTREAM MILES OF THE SITE? NO IF YES DESCRIBE IF ANY OF THE FOLLOWING APPLY

Multiple sensitive environments? NO

Federally designated sensitive environment(s)? NO

Sensitive environment(s) downstream on a small or slow flowing surface water body?

NO

D) IS THE SITE LOCATED IN AN AREA OF KARST TERRAIN? NO

Describe

E) IS THE AQUIFER UNDERLYING THE SITE A "SOLE SOURCE" AQUIFER AS DESIGNATED ACCORDING TO SECTION 1424(e) OF THE SAFE DRINKING WATER ACT? NO

Describe IN the Houston Area, A SHALLOW ALLUVIUM AQUIFER EXISTS ABOVE the AQUIFERS OF CONCERN, CHICOT AND EVANGELINE.

F) DOES ANY QUALITATIVE OR QUANTITATIVE INFORMATION EXIST THAT PEOPLE LIVE OR ATTEND SCHOOL ON ONSITE CONTAMINATED PROPERTY? NO

Describe

INTEROFFICE MEMORANDUM

TO File

THRU K H Malone, Jr , FITOM

FROM for Anthony R Herald, for FIT Ceologist

DATE June 7, 1989

SUBJECT Rationale for PreScore for A B Chance Facility, Houston, Harris County, Texas

1 Soil and water were removed during site closure Contaminated storm water from waste storage lagoon equals 3,600 gallons = 72 drums = 18yd^3

Contaminated soil from waste storage lagoon = 1,162 2 yd^3

Contaminated soil from inlet piping area = 19 2 yd^3

Contaminated soil from run-off area = 165 4 yd^3

Total Material = 1,364 8 yd^3

HRS Value = 7

2 Contaminants evaluated are lead and chromium, with a toxicity and persistence matrix value of 18

3 Twenty two wells were identified within a four-mile radius of the site No public water supply well exists within the four miles Total number of wells, including commercial, industrial and domestic are 22 The total number of population using wells within the 4-mile radius = 83 6

4 The shallow "alluvial" aquifer is assumed to be very shallow (10 feet) although the depth was never stated The aquifer of concern, the Chicot/Evangeline, is 70 to 80 feet below surface (Ref 9, p 12, Texas Brine Corporation 73 to 79 feet)

RE A B Chance Co , Almida Road, Houston, Texas, TXD079417515

Dear Ms Maier

As I advised you during our phone conversation of September 21, 1984, the A B Chance Division of Emerson Electric closed operation of the facility at Almida Rd , Houston, Texas in 1982 and sold the property to Houston Export Crating Co , Inc Prior to turning over the property to the new owner, a closure plan concerning the hazardous waste generated and temporarily stored at this facility was submitted to the Texas Dept of Water Resources Further, the plan was implemented during the latter half of August and first week of September, 1982 Enclosed is a copy of "Certification of Closure of a Hazardous Waste Storage Lagoon (Spent Galvanizing Pickle Liquor-K062)" and a copy of our letter dated Oct 14, 1982 of transmittal of the Certificate to the TDWR During the implementation of the closure plan, a representative (Susan Ripley) of the TDWR was on the site

Accordingly, as we agreed, we had a hazardous waste inspection since November 19, 1980 and therefore we are only required to answer the three questions of section 1 of your survey

1 Has an EPA or State inspection been conducted at the referenced facility since November 19, 1980? Yes

a) Date of inspection August 30 thru September 8, 1982
b) Agency which conducted the inspection Texas Department of Water Resources
c) Name(s) of inspector(s), if known Susan Ripley

A copy of the inspection report, if made, was not sent to us

I believe this fulfills our obligation If I can be of further assistance, please advise

Sincerely,

Michael J Lacy

Certification of Closure

Galvanizing Waste Lagoon

1 0 Introduction

In July of this year, a plan was developed for closure of a hazardous waste surface impoundment formerly utilized for the storage of spent pickle liquor from galvanizing operations The formal plan was presented in accordance with the closure and post-closure requirements of the Texas Water Code, paragraph 156 22 17 006. The closure plan presented was based upon the removal of all hazardous waste from the site, and was processed under rules adopted pursuant to the Solid Waste Disposal Act, specifically under Sections 156 22 13 001- 006 This included, among other things, submittal of the plan, public notification of the proposed closure, and approval by the Executive Director of the Texas Department of Water Resources (TDWR) Upon receipt of approval, the closure plan was implemented, beginning on August 30, 1982, with completion on September 8, 1982 This report represents verification of completion of those activities described in the closure plan along with certification of closure in accordance with rule 156 22 13 006

REI

2 0 Closure Procedures

The implementation of the closure procedures given by Section 4 0 of the July, 1982 Closure Plan Report were initiated following ten days notice to the regional office of the TDWR, and are described chronologically as follows

2 1 Contaminated Stormwater Disposal - Stormwater, which had accumulated in the waste lagoon was removed by vacuum truck and transported to Disposal Systems, Inc for deep well injection at their Deer Park facility The total quantity of contaminated stormwater was 3,600 gallons and was shipped under TDWR Manifest Number 531802

2 2 Overexcavation of the Pit - Soils contaminated with pickle liquor (K062) were removed from the lagoon base and sidewalls by excavation with a hydraulic backhoe For field monitoring purposes, soil color and texture were observed, with excavation proceeding to a light colored stratum At that point, a few random samples of soils were obtained for metals analysis as given by Table 2-1 as follows

TABLE 2-1

Initial Random Sampling in Pit Base

Sample No	pH	Moisture (%)	Chromium (mg/kg)	Lead (mg/kg)
1	2 8	26 0	25	440
2	3 4	23 8	25	392
3	2 3	27 7	18	448
4	2 9	33 1	15	376
5	3 1	32 1	67 5	356

Pit excavation then proceeded for removal of pit base and side-wall contaminated soils, while monitoring soil pH As an interim check on the effectiveness of this excavation, representative samples were taken from selected areas of the pit for metal analysis These data are given by Table 2-2 as follows

TABLE 2-2

Decontamination of Pit - Primary Excavation

Sample Location	Chromium (mg/kg)	Lead (mg/kg)
1	20 0	186
2	14 4	148
3	18 9	91
4	43 3	116
5	14 4	323
6	12 2	186
7	16 7	159
8	23 3	146
9	10 0	80
10	7 8	318
11	12 2	84
12	8 9	230

Final excavation was then conducted, with emphasis placed upon those areas indicating high lead concentrations in the previous table A second set of verification samples were then obtained for analysis, with the results given by Table 2-3 as follows

TABLE 2-3

Decontamination of Pit - Secondary Excavation

Sample Location	pH	Chromium (mg/kg)	Lead (mg/kg)
1	7 0	11	91
2	7 4	24	67
3	6 4	16	52
4	7 0	34	58
5	6 1	9	64
6	5 4	11	83
7	7 0	11	89
8	7 3	9	44
9	4 8	7	82
10	6 6	10	91
11	6 0	9	71
12	5 7	29	113

Areas indicating residual lead contamination in the locations of samples 1, 7, 10, and 12 were further excavated, with final decontamination test results in these areas given by Table 2-4 as follows

TABLE 2-4

Decontamination of Pit - Final "Hot Spot" Excavation

Sample Location	pH	Chromium (mg/kg)	Lead (mg/kg)
1	7 0	15	56
7	7 1	15	11
10	6 9	16	80
12	7 0	26	70

Locations utilized for these various sampling activities are given by Attachment No 1

2 3 Surrounding Soil Excavation - Soils were then removed from the reported spill area to the west of the pit, and down to the flood control ditch The general boundaries of this runoff area had been defined by previous site evaluation activities, and approximately two feet of surface soils were removed from this entire area Analytical results of samples taken to verify decontamination in this area are given by Table 2-5, with the sampling locations given in Attachment No 1

REI

TABLE 2-5

Decontamination of Runoff Area

Sample Location	pH	Chromium (mg/kg)	Lead (mg/kg)
1	9 4	26	84
2	8 0	13	13
3	8 0	26	10
4	7 4	17	10
5	8 1	25	10
6	5 0	22	18
7	7 2	33	35
8	8 5	18	53
9	5 0	18	28
10	8 5	18	20
11	8 5	11	18
12	7 5	14	18

2 4 Transfer Piping - As proposed in the Closure Plan, the vertical sections of the PVC transfer piping were removed for disposal During this operation, no liquids were observed in the lateral portion of the line, and it was capped and closed in place Some contaminated soils were observed at the inlet end of the piping system, as shown by the pH values given in Attachment No 1 Surface soils were removed in these locations, and the entire area neutralized with lime, and graded

2 5 Contaminated Soil Management - All soils excavated from these areas were placed into plastic lined, 25 yard, dump bed trucks for transportation to the Rollins Environmental Service site At the site, they were mixed with cement kiln dust for stabilization, and buried in the Rollins Class I landfill Documentation of this waste material transport is provided in Attachment No 2, and is summarized as follows

TABLE 2-6

Contaminated Soil Transport and Disposal

Excavation Area	Date(s) (1982)	Number of Loads	Volume (cu yds)
Pit	8/30 - 9/1	24	488 8
Inlet Pipe	9/1	1	19 2
Runoff Area	9/2	8	165 4
TOTALS		33	673 4

2 6 Stabilization and Cover - Industrial lime was then added to the pit surface and to the runoff areas where low pH values were observed Following mixing into the shallow surface soils using the hydraulic backhoe, soil pHs were determined to be in excess of 7 in all locations which had been excavated Following approval by representatives of the TDWR regional office, these areas were backfilled with clean, clay rich materials, compacted with a dozer, and crowned to provide for stormwater runoff

REI

2 7 Soil Stabilization - All areas within the proposed deed recordation area, as discussed later, were then tested to determine surface soil pH Soil pH values in all areas ranged between 8 4 and 9 5, therefore, no lime addition was necessary The entire area was graded, however, with loose, fine grained soils spread over the top of the crowned clay covers

2 8 Erosion Control - The entire area which was effected by these closure activities, including the runoff area adjacent to the drainage ditch, was seeded with "hydromulch" to establish a vegetative cover

3 0 Verification Testing - Vertification testing was conducted in accordance with the Closure Plan, with the data reported in the previous section A statistical evaluation of the decontamination data for the excavation areas is presented Table 3-1 as follows

TABLE 3-1

Statistical Evaluation of Decontamination Data

	pH	Lead		Chromium	
Decontamination Level	2 0	55	31	37	8
Pit Data	4 8 - 7 4	6 1	18	16	7
Runoff Area Data	5 0 - 9 4	26 5	20	20	6

4 0 Conclusions Based upon the data contained in previous sections, and the attachments made a part of this report, it is concluded that

4 1 All procedures and notification requirements contained within the Closure Plan as approved by the Texas Department of Water Resources have been implemented as proposed

4 2 The decontamination effort has met the closure objective for removal of all underlying and surrounding soils contaminated by the listed waste (K062 - Spent Pickle Liquor from Steel Finishing Operations)

4 3 The facility is no longer considered a hazardous waste site, but in accordance with prior agreements with the Texas Department of Water Resources, the general area which has been utilized for waste material storage will be recorded in the deed records of the property as a closed "Class I - Non-hazardous" solid waste disposal site A meets and bounds description, along with the proposed format for deed recordation is given in Attachment No 3

5 0 Certification

I am a registered professional engineer in good standing under the Texas Engineering Practice Act, ARticle 3271a, Vernon's Texas Civil Statutes I certify that the verification of closure activities described by this report presents an accurate summary of the activities performed, and that the facility has been closed in accordance with the specifications contained in the approved closure plans

Pursuant to Rule 156 22 01 007 of the Rules of the Texas Department of Water Resources pertaining to Industrial Solid Waste Management this document is hereby filed in the Deed Records of Harris County Texas in compliance with the recordation requirements of said rule

I

A B Chance Company has permanently deposited industrial waste on the land described herein A copy of Notice of Registration 30491 including a description of wastes disposed of and a description of the waste disposal facility is attached hereto and is made a part of this filing

II

Being a 0 416 acre tract more or less, out of the A B Chance Company called 16 933 acre tract in the James Hamilton Survey (David White Assignee) Abstract 877, recorded in Volume 407 Page 267, of the Deed Records of Harris County, Texas said 0 416 acre tract being more particularly described as follows

COMMENCING at a 3/4' pipe for the Southwest corner of said A B Chance Company's 16 933 acre tract;

THENCE North along the East boundary for a distance for a distance of 75 39 feet;

THENCE North 30° 40' 00' West, a distance of 186 61 feet for the Northeast corner;

THENCE, South 60° 00' 00 West, a distance of 43 feet for the Northwest corner;

THENCE South 12° 26 28 East a distance of 219 55 feet for the Southwest corner;

THENCE North 90° 00' 00 East a distance of 85 12 feet to the POINT OF BEGINNING and containing 0 416 acres of land more or less

Wastes deposited hereon have been classified by the Texas Department of Water Resources as Class I, Nonhazardous Waste

III

The owner of the site is Houston Export Crating Company Inc a Texas corporation and its address is P O Box 9200, Houston Texas 77011 where specific information may be obtained from the company president

TEXAS DEPARTMENT OF WATER RESOURCES

NOTICE OF REGISTRATION
Industrial Solid Waste Generation/Disposal

This is not a permit and does not constitute authorization of any disposal facilities listed below Requirements for solid waste management are provided by Chapter 22, Rules of the TWDB

REGISTRATION NUMBER 30491 (supersedes Registration Number N/A)

This number is to provide access to stored information pertaining to your operation Please refer to this number in any correspondence or reports

Company Name A.B. Chance (AKA Coastal Galvanizing)
Mailing Address P O Box 45699, Houston, Texas 77045
Site Location 12317 Alameda, Houston, Texas

Person in Charge Tommy Thurman, Mgr Eng Services Phone 713/433-2401
TDWR District 7 Number of Employees ~~>100~~

I WASTES GENERATED

	WASTES GENERATED	CLASS	CODE	DISPOSITION
1	Caustic wastes, spent (pickling solution)	I	100630	On-site (Storage Off-site
2	Spent sulfuric acid pickling solution containing Mn, Fe, Zn, Cu, Ni, Cn, Cd	I	100970	On-site (Storage Off-site

II SHIPPING/REPORTING Under Rule 22 01 012 of the TWDB, issuance of shipping-control tickets and monthly reporting are required for off-site disposal of the Class I wastes listed in Part I The first Shipment Summary Report should be submitted for the month of January no later than February 25, 1979 Forms and instructions are enclosed for the following wastes now being shipped

1 100630 - caustic waste spent
2 100970 - spent sulfuric acid solution

III ON-SITE DISPOSAL FACILITIES

1 Lagoon or pond for the storage of wastes nos 1 & 2

Facilities are located on property owned and/or controlled by A B Chance Co (AKA Coastal Galvanizing) at 12317 Alameda in Houston, Harris County, Texas in Segment 1007 of the San Jacinto River Basin

IV RECORDS

A For purposes of filing annual disposal reports pursuant to Rule 156 22 01 012(a), records should be maintained for disposal of the following waste(s) listed in Part I

Not Applicable

B Proof of recordation in the county deed records as required by Rule 156 22 01 007, should be submitted to the Executive Director no later than for the following disposal facilities as listed in Part III

Not Applicable

Re Certification of Closure
Solid Waste Registration No 30491

Dear Mr Davis,

Enclosed are two copies of a report prepared by an independent consulting engineer certifying closure of our galvanizing waste storage lagoon in Houston

Our company was also represented during the entire closure activities Therefore, in accordance with Rule 156 22 13 006 of the Texas Water Development Board, and acting as owner of the facility during its operation, I certify that the galvanizing waste lagoon has been closed in accordance with the specifications contained in the approved closure plan

We appreciate the assistance of you and your staff in completing this project, and trust that these certifications and the filing of the deed recordation contained in the closure report conclude our responsibility in this matter

Yours truly,

A B CHANCE COMPANY

Charles L Ray
Executive Vice President

TEXAS DEPARTMENT OF WATER RESOURCES

PERMIT APPLICATION
FOR
INDUSTRIAL SOLID WASTE STORAGE/PROCESSING/DISPOSAL FACILITY

PART A - FACILITY BACKGROUND INFORMATION

APPROVED DEC 26 1984 IMZAR

I GENERAL INFORMATION

A Applicant A B Chance Co
(Individual, Corporation, or Other Legal Entity Name)

Address 12317 Almeda Road

City Houston State Texas Zip Code 77045

Telephone Number 433-2401

B Authorized Agents

1 List those persons or firms authorized to act for the applicant during the processing of the permit application Also indicate the capacity in which each person may represent the applicant (engineering, legal, etc) The person listed first will be the primary recipient of correspondence regarding this application Include the complete mailing addresses and phone numbers

Tommy Thurman - Engineering
Amos Zoellers - Plant Manager
Dean Misterek - Plant Operations

Address Same As 1 A

2 List the individual and his/her mailing address that will be responsible for causing any necessary public notices to be published in the newspaper

RECEIVED
AUG 17 1980
PERMIT CONTROL
TDWR

Name Amos A Zoellers

Address Same As 1 A

City Houston State TX Zip Code 77045

Telephone Number 433-2401

3 List the applicant's authorized agent for service

Name _____

Address _____

City _____ State _____ Zip Code _____

Telephone Number _____

C Operator Identify the entity who will conduct facility operations If same as applicant, state "same as applicant "

Name Amos Zoellers

Address Same As 1 A

City _____ State _____ Zip Code _____

Telephone Number _____

D Ownership

1 Indicate the ownership status of the facility

a Private X

(1) Corporation X
(2) Partnership ____
(3) Proprietorship ____
(4) Non-profit organization ____

b Public ____

(1) Federal ____
(2) Military ____
(3) State ____
(4) Regional ____
(5) County ____
(6) Municipal ____

c Other (specify) _____

2 Is facility and site property owned by applicant?

X Yes ____ No

If you checked no",

a Submit as an attachment a copy of the lease for use of said facility and/or site property, as appropriate, and

b Identify the facility owner If same as applicant in Part A above, state same as applicant If different from the applicant, please note that the owner is required to sign the application on page 5

Name Same as Applicant

Address _____

City _____ State _____ Zip Code _____

Telephone Number _____

E Type of Permit Application

1 New X
2 Amendment ____ (TDWR Permit Number _____)

F Registration and Permit Information

1 Denote your TDWR Solid Waste Registration Number If none, state "none"

#30491

2 Indicate (by listing the permit number(s) in the appropriate column below) all existing or pending State and/or Federal permits or construction approvals which pertain to pollution control or industrial solid waste management activities conducted by your plant or at your location Complete each blank by entering the permit number, or the date of application, or 'none"

Relevant Program and/or Law

		Permit No	Government Agency*
a	Texas Solid Waste Disposal Act	30491	
b	Wastewater disposal under the Texas Water Code		
c	Underground injection under the Texas Water Code		
d	Texas Clean Air Act		
e	Texas Uranimum Surface Mining & Reclamation Act		
f	Texas Surface Coal Mining & Reclamation Act		
g	Hazardous Waste Management program under the Resource Conservation and Recovery Act

Certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete

Signature, Tommy W Thurman, Date 8/13/80

Signature Amos A Zoellers, Date 3/14/80

SUBSCRIBED AND SWORN to before me by the said signors

on this 14th day of August, 19 80

My commission expires on the 10th day of March, 19 84

Gwendolyn F Randle
Notary Public in and for

Harris County, Texas

II SITE BACKGROUND INFORMATION

A Location of Site

1 Facility Name A B Chance Company

Street Address, if available 12317 Almeda Rd , Houston

TX County Harris

2 Are your waste management operations within the extraterritorial jurisdiction of a municipality?

X Yes ____ No

If you checked "yes," what municipality? Houston

3 Give a verbal description of the location of the facility site with respect to known or easily identifiable landmarks

Street address is adequate
Four miles south of the Astrodome on State Hwy 288

4 Detail the access routes from the nearest U S or State Highway to the facility site

State Hwy 288 (Almeda Rd)

5 Submit as "Attachment A" a United States Geological Survey (USGS), 7½ minute quadrangle map --Indicate on this map the location of the site and the land use patterns of the areas within 1 mile (1 6 km) of the site boundaries (e g , residential, commercial, recreational, agricultural, undeveloped, etc) Each area of land use should be labeled on the map (Note if such a map is not available, submit a substitute map such as a State Department of Highways and Public Transportation county map with sufficient scale to adequately show the site location and surrounding land use patterns

6 a Submit as "Attachment B" a map indicating the boundaries of all adjacent parcels of land, and a list of the names and mailing addresses of all adjacent landowners and other nearby landowners who might consider themselves affected by the activities described by this application Cross-reference this list to the map through the use of appropriate keying techniques The map should be a USGS map, a city or county plat, or another map or drawing with a scale adequate enough to show the cross-referenced affected landowners

b Indicate from what source(s) the names and addresses of persons identified as affected were obtained

City _____
County _____
School District _____
Water District _____
Abstract Co _____
Other (specify) Map

7 Enter the geographical coordinates of the site

Latitude 29 deg 37 min 56 sec

Longtitude 95 deg 24 min 36 sec

8 Is the facility located on Indian lands? Check one

____ Yes X No

B Legal Description of Site

Submit as "Attachment C" a legal description of the entire tract of land upon which the waste management operations referred to in this permit application occur or will occur

C Site Environmental and Technical Information

1 Climatic and Hydrologic

a Is any portion of your waste management facility site (including proposed, active, and inactive portions) subject to flooding from adjacent or nearby surface water bod s under the following conditions?

24-hr Rainfall Event	Yes	No
5-year	___	___
50-year	___	___
100-year	X	___

b Are there any producing groundwater wells on your site property?

X Yes ____ No

If you checked yes,"

(1) Indicate the number of such wells 1, and

(2) Indicate the corresponding water uses below

(a) Industrial uses
Cooling water ____
Process water X
Fire-control water X

(b) Potable (drinking) water X

(c) Agricultural uses
Irrigation water for livestock food crops or grazing land ____
Livestock watering ____
Irrigation water for human food crops ____

c Are any adjacent or nearby surface waters utilized by the applicant?

____ Yes X No

If you checked "yes," indicate the corresponding water uses below

(1) Industrial uses
Cooling water ____
Process water ____
Fire-control water ____

(2) Potable (drinking) water ____

(3) Agricultural uses
Irrigation water for livestock food crops or grazing land ____
Livestock watering ____
Irrigation water for human food crops ____

2 Site Land Use and Subsidence Information

a Is any portion of the overall site property utilized for agricultural purposes?

____ Yes X No

If you checked 'yes," indicate the corresponding uses below

(1) Grazing ____
(2) Livestock food crop ____
(3) Human food crop ____
If you checked no (2) or (3), specify the types of crops grown _____

b Is any portion of the overall site property subject to land subsidence?

____ Yes X No

If you checked "yes," estimate the magnitude of the greatest subsidence that has occurred (in units of feet) _____

III WASTES AND WASTE MANAGEMENT

A Waste Generation and Management Activities

Is any hazardous industrial solid waste (see Title 40, Code of Federal Regulations, Part 261) presently or proposed to be generated at your facility?

X Yes ___ No

If you checked "no," go to Section III B 2 below
If you checked "yes," answer the following question

1 Are you presently registered with TDWR as a solid waste generator?

X Yes ___ No

If you checked "no," contact the Solid Waste Section of TDWR in Austin, Texas to obtain registration information Also, continue with the application form (go to Number 2 below)

If you checked "yes," go to Section I of your Notice of Registration, determine which of your wastes are hazardous, and list these wastes (and mixtures) in Table III-1 (see Number 2 below)

2 Complete Table III-1 below, listing all hazardous wastes and all mixtures containing any hazardous waste which are presently or proposed to be generated at your facility (see 40 CFR 261 31-33), attaching additional copies as necessary

In this table, "TDWR Sequence Number" refers to the number in the left-hand column in Section I of your Notice of Registration (Note if you are not registered with TDWR, enter "NA" for TDWR Sequence Number and TDWR Waste Code Number)

For the EPA Hazard Code and EPA Hazardous Waste Numbers, see 40 CFR 261 30-33 For annual quantity, provide the amount in units of pounds (as generated) for each waste and/or waste mixture

Please group the listings of wastes by SIC code, insofar as your processes are designated by SIC codings Also, within the general SIC code groups, give a brief description of the specific process or operation from which the waste has been generated

B Waste Management Facilities Summary

1 For each waste and waste mixture listed in Table III-1 that is presently or proposed to be managed on-site, provide the summary sheet shown in Table III-2 (Note you must make copies of Table III-2 and submit the completed set of tables as 'Attachment D)

Table III I Generated Hazardous Wastes and Management Activities

Verbal Description of Waste	TDWR Sequence Number	TDWR Waste Code Number	EPA Hazard Code	EPA Hazardous Waste No	Waste Management Activities (Check applicable items) Off Site Disposal	On-Site Storage[1]	On-Site Processing[2]	On-Site Disposal	Annual Quantity Generated (lbs)	SIC Code and Process
Spent Sulfuric Acid	30491	100630	C		✓	✓			2,000,000	3479031
" Caustic Liquid	"	"	"		✓				160,000	"
" Caustic Sludge	"	"	"		✓				20,000	"
" Preflux Sludge	--	--	C		✓				20,000	3479031
Paint Sludge	--	--			✓	✓			5,000	
									2,205,000	

[1] Storage means the interim containment or control of waste after generation and prior to ultimate disposal

[2] Processing means the extraction of materials transfer volume reduction conversion to energy or other separation and preparation of solid waste for reuse or disposal including the treatment or neutralization of hazardous waste so as to render such waste nonhazardous safer for transport amenable for recovery amenable for storage or reduced volume The transfer of solid waste for reuse or disposal as used above does not include the actions of a carrier in conveying or transporting solid waste by truck ship pipeline or other means

2 Has the applicant at any time conducted the on-site storage, processing, or disposal of industrial solid waste now identified or listed as hazardous waste?

__X__ Yes _____ No

If you checked 'yes,' complete Table III-3 indicating the hazardous industrial solid waste management facility components which were once utilized at your plant site but are no longer in service (i e , inactive facility components)

If you checked 'no," and if no hazardous industrial solid waste is presently or proposed to be generated or managed at your facility, then you need not file this permit application Otherwise, proceed with application form

3 For each facility component indicated in Table III-2 (Attachment D) and Table III-3, complete the following Table III-4 attaching additional copies as necessary Enter the name of each facility component as specified in the earlier tables

Give the design capacity of each facility component in any of the units shown In the case of inactive facilities for which design details are unavailable, an estimate of the design capacity is sufficient

Please note that each facility component should be described in your own words on the line provided for 'verbal description "

4 Provide an estimate of the total weight (lbs) of hazardous industrial solid waste material that has been disposed of and/or stored within your site boundaries and not removed to another site

C Location of Waste Management Facilities and Components

1 Submit as 'Attachment E' a drawn-to-scale topographic map (or other map if a topographic map is unavailable) extending one mile (and only one mile) beyond the property boundaries of the overall plant site, depicting the following

a The approximate boundaries of the site (described in Section II B) and within these boundaries, the location and boundaries of the areas occupied by each active, inactive, and proposed facility component (see Tables III-2 and III-3 for facility components) Each depicted area should be labeled to identify the facility component(s), component status (i e active, inactive, or proposed), and area size in acres

Table III-3 Inactive Hazardous Industrial Solid Waste Management Facility Components

Indicate the inactive facility components which were used for storage/processing/disposal of hazardous wastes or mixtures containing any hazardous waste by entering the number of such facility components in the space provided

THENCE along the Northeasterly line of said 3 1-acre tract South 63° 11 00 East 319 81 feet to a point
THENCE North 65° 15 30 West 313 57 feet to point of beginning containing 1 816 square feet more or less
PARCEL B From aforesaid Southwest corner of said 3 1-acre tract along the Southerly line of said tract North 87° 13 00 East 656 95 feet to point (X=3 141 150 74) (Y=671 471 64) of beginning said point being 60 from and Southwesterly of the Southwesterly line of the R/W (40 feet in width) for I & G N R R Spur
THENCE along a line 60 feet from and southwesterly of said R/W line North 33° 34 00 West 31 76 feet to a point in aforesaid Northeasterly line of said 3 1-acre tract
THENCE along said Northeasterly line South 63° 11 00 East 55 23 feet to the East corner of said 3 1-acre tract
THENCE along aforesaid Southerly line of said 3 1-acre tract South 87° 13 00 West 31 77 feet to beginning and containing 433 square feet more or less

TRACT # 3 A tract of land being 1 772 acres out of the James Hamilton Survey Section 53 Abstract 877 Harris County Texas and being a part of a tract sometimes referred to as the Houston Industrial District out of said survey and being a part of that certain 7-acre tract heretofore conveyed to Henry J Beck Jr by deed recorded in Volume 2251 Page 9 Harris County Deed Records said 1 772-acre tract being more particularly described by metes and bounds as follows

BEGINNING at the Southeast corner of said Beck 7-acre tract said point being also the Southwest corner of a certain 3 1-acre tract heretofore conveyed to the Almeda Industrial Corporation by deed recorded in Volume 3465 Page 359 Harris County Deed Records
THENCE South 89° 59 West with the south line of said Beck tract 297 22 feet to a point for corner
THENCE North 27° 30 30 East 472 73 feet to a point for corner in the southwesterly line of an easement heretofore granted to the Harris County Flood Control District
THENCE South 69° 29 30 East with the Southwest line of said easement 88 81 feet to its intersection with the East

DEED RECORDS
VOL 7045 PAGE 425
C57-29-129

line of said Beck 7-acre tract being also the West line of the Almeda Industrial Corporation tract
THENCE South 0° 01 East with the dividing line between said tracts 378 18 feet to the PLACE OF BEGINNING

TRACT # 4 Being a tract of 0 6676 acres out of the James Hamilton Survey Section 53 Abstract 877 Harris County Texas, and being a part of a tract sometimes referred to as the Houston Industrial District out of said Survey and being a part of that certain 7 acre tract heretofore conveyed to Henry J Beck Jr by deed recorded in Volume 2251 Page 9 Harris County Deed Records said 0 6676 acre tract being more particularly described by metes and bounds as follows
COMMENCING for point of reference at the southeast corner of said Beck 7 acre tract said point being also the southwest corner of a certain 3 1 acre tract heretofore conveyed to the Almeda Industrial Corporation by deed recorded in Volume 3465 Page 359 Harris County Deed Records
THENCE S 89° 59 W with the south line of said Beck tract 297 22 feet to the southwest corner of a 1 772 acre tract heretofore conveyed to Milton C Cross et al by deed recorded in Volume 4815 Page 505 Harris County Deed Records said point being the south and beginning corner of the herein described 0 6676 acre tract
THENCE N 27° 30' 30" E with the west line of said 1 772 acre tract 472 73 feet to its northwest corner in the south line of a Harris County Flood Control District Easement described in deed recorded in Volume 4201 Page 428 Harris County Deed Records
THENCE N 62° 29 30 W with said line 123 03 feet to an iron rod for corner
THENCE S 12° 55 12 W 488 48 feet to the PLACE OF BEGINNING

TRACT # 5 A tract of ten acres situated in the James Hamilton Survey No 53 Abstract 877 Houston Harris County Texas and being a part of a certain 28 08 acre tract described in deed from Milton T Gregory to M D Burnett et al recorded in Volume 2780 Page 654 of the Harris County Deed Records said ten acre tract being more particularly described as follows
BEGINNING at the Northwest corner of said 28 08 acre tract in the East line of the I & G N R R right-of-way
THENCE East with the North line of said 28 08 acre tract 1 199 00 feet
THENCE South 0 deg 02 min East 663 20 feet to a point for corner in the South line of said 28 08 acre tract
THENCE West with said line 189 03 feet to the Southeast corner of a 12 002 acre tract described in deed recorded in Volume 3131 Page 516 Harris County Deed Records
THENCE North with the Ea t line of said 12 002 acre tract 257 20 feet
THENCE West 493 15 feet
THENCE North 217 23 feet to a point in the North line of the above referenced 12 002 acre tract
THENCE West with said line 373 67 feet to a point of curve of a curve to the left
THENCE with said curve which has a radius of 359 72 feet and a central angle of 43 deg 55 min 15 sec for a distance of 275 75 feet to a point in the West line of the above referenced 28 08 acre tract being the East line of the I & G N R R right-of-way
THENCE North 20 deg 07 min East with said line 308 19 feet to the PLACE OF BEGINNING

together with the right to use for roadway purposes a strip of land fifteen feet wide adjoining said property lying North of the hereinabove described property as set out in instruments dated January 24 1950 executed by and between L P Davison and wife Annie M Davison and Frank M George and wife Grace F George recorded in Volume 2533 Page 130 and in Volume 2811 Page 428 of the Deed Records of Harris County Texa

DEED RECORDS
VOL 7045 PAGE 426

AND FURTHER in addition to the land particularly described above all other lands, easements and property rights owned or claimed by grantor adjoining and contiguous to the North and East ides and along the portion of the West side adjoining the I & G N R R Right-of-Way and along the most Southerly 189 03 feet of the land particularly described above although not included within the boundaries of the land particularly described above

SUBJECT HOWEVER to the following

(1) All easements and restrictions of record

(2) A 1/16th mineral interest in and to Tract # 2 reserved by Agnes Clark in an instrument recorded in Volume 3296 Page 300 of the deed records of Harris County Texas

(3) Mineral reservation as to Tracts # 3 and # 4 reserved by Lester B Clark et ux Agnes L Clark in deed recorded in Volume 2251 Page 9 of said deed records

(4) Mineral reservation as to Tract # 5 reserved to Bernard Waidhofer et al in deed recorded in Volume 4824 Page 320 of said deed records as modified by instrument recorded in Volume 6591 Page 244 of said deed records

(5) Deed of trust dated December 22 1964 to Houston Bank and Trust Company recorded in Volume 5025 Page 451 of the Mortgage Records of Harris County Texas as to all of the aforedescribed real estate and subject further to Grantee assuming and agreeing to pay the Bond secured by said deed of trust in accordance with its terms

It is the purpose and intention of Grantor to convey to Grantee by this deed all right title and interest which Grantor has in any real estate located in Harris County Texas and whether or not the same be hereinabove specifically described

TO HAVE AND TO HOLD the above described premises subject to the matters herein stated together with all and singular the rights and appurtenances thereto in anywise belonging unto the said Grantee its successors and a signs forever and Grantor does hereby bind itself its succes ors and assigns to warrant and forever defend all and singular the said premi es unto the said Grantee their successors and a signs against every per on whomsoever lawfully claiming or to claim the same or any part thereof

EXECUTED this nd day of J nu ry 1968

(PROCESS FLOW DESCRIPTION)

1) Spent sulfuric acid - Pure sulfuric acid liquid is delivered by tank truck and stored in a 3000 gal above ground storage tank It is then dispensed in a 2 in P V C pipe to two sulfuric process tanks, as needed, and diluted with water to a 15% concentration After 3 to 4 weeks of use for pickling steel the solution becomes contaminated with iron and is considered spent acid and must be disposed of One of two methods are used First is that it is pumped directly into a chemical tank truck for off-site disposal Secondly, it is pumped to a lined pond (by under ground pipeline) for temporary storage until the chemical tank truck can haul it to off-site disposal

2) Spent caustic liquid - Liquid or flake caustic is delivered by truck and dispensed directly into the process tank and diluted to a 20% concentration with water Even though caustic can be recharged and never is really spent, once yearly it is disposed of in order to clean the sludge from the bottom of the process tank This liquid is pumped directly from the process tank by a vacuum tank truck for off-site disposal

3) Spent caustic sludge - A sludge is formed in the bottom of the process tank which is made-up of dirt, iron, paint, and oil since the caustic is used for cleaning of the steel prior to pickling This sludge is removed yearly by vacuum tank truck directly from the process tank for off-site disposal

4) Spent preflux sludge - This solution is diluted zinc ammonium chloride used for fluxing steel prior to galvanizing Once annually the sludge formed on the bottom (iron sulfate) of the process tank is removed by vacuum tank truck and removed for off-site disposal

5) Paint sludge - One of our product lines is painted (by dip process) in a water base enamel paint The drippings and spillage is collected in a concrete basin for removal by vacuum tank truck for off-site disposal

Introduction

GENERAL	VIII
CONTENTS OF THE REPORT	VIII
SYMBOLS AND GEOGRAPHIC ABBREVIATIONS	IX
SUPPRESSION OF DATA FOR CONFIDENTIALITY	IX
1970 1980 CENSUS TRACT COMPARABILITY	IX

GENERAL

This report is part of the *Census Tracts* series and presents demographic social economic and housing statistics for census tracts from the 1980 Census of Population and Housing Legal provision for this census which was conducted as of April 1 1980 was made in the Act of Congress of August 31 1954 (amended August 1957 December 1975 and October 1976) which codified Title 13 United States Code

The *Census Tracts* series consists of an individual report for each standard metro politan statistical area (SMSA) and for each State in which census tracts have been delineated outside SMSA s A listing of all the reports in this series appears on pages v vii The abbreviated identification for each report is PHC80-2 (i e *Population and Housing Census* 1980 Series 2) followed by a number designating the SMSA or State which the report covers

In the SMSA reports the tract data are summarized to the following larger levels of geography the SMSA each State portion of multi State SMSA s counties or county equivalents (SMSA county portions in New England) incor porated places of 10 000 or more inhabi tants and most census designated places (CDP s) of 10 000 or more inhabitants In the State reports summaries are shown for the tracted portion of the State outside SMSA s counties or county equivalents (nonSMSA county portions in New England) incorporated places of 10 000 or more inhabitants and most CDP s of 10 000 or more inhabitants For an explanation of CDP s not shown in the SMSA or State reports see appendix A

For census tracts which are split by the boundary of a place of 10 000 or more the appropriate portion is shown within the place or balance of county with the symbol p following the tract number Totals for these split tracts appear at the end of the portion of each table for the relevant county

The 1980 census figures presented here may differ from those shown in the *Advance Reports* PHC80 V and in the Public Law 94 171 redistricting data products The changes reflect corrections of errors found after the PHC80-V reports and P L 94 171 materials were prepared The changes may affect any geographic area shown in this report

The content and procedures of the 1980 census were determined after evaluation of the results of the 1970 census consultation with a wide variety of users of census data and extensive field testing A number of changes were introduced in 1980 to improve the usefulness of the census results The changes do not however affect to any appreciable extent the comparability between 1980 census data and 1970 census data for most characteristics Further information on comparability for specific subjects appears in Appendix B Definitions and Explanations of Subject Characteristics

More detailed information on the technical and procedural matters covered in the text of this report can be obtained by writing to the Director Bureau of the Census Washington D C 20233 Such information will also appear in other publications of the 1980 census

CONTENTS OF THE REPORT

This report contains text (this introduc tion and six appendixes) a table c contents and 39 detailed tables Inform tion on changes in the boundaries c census tracts between 1970 and 1980 fc the area covered in this report is shown the end of this introduction The trac comparability table shows 1970 com ponents of 1980 tracts and 1980 com ponents of 1970 tracts as relevant fo (1) 1970 tracts that were split into tw or more 1980 tracts (2) 1970 tracts tha were combined into new 1980 tracts (3) 1970 tracts in areas with new trac numbering systems for 1980 and (4 those tracts with boundary change between 1970 and 1980 that affecte 100 or more persons A census tract wil not appear in the comparability table if no change occurred between 1970 an 1980 or boundary revisions affecte fewer than 100 persons and that wa the only change that occurred to tha tract

Tables P 1 through P 7 present data or general population characteristics basec on tabulations of 100-percent data table P-8 through P 21 present data on social and economic characteristics based or sample tabulations Tables H 1 through H 6 show 100-percent housing data ano Tables H 7 through H 18 show sample housing data

Appendix A describes the variou area classifications (e g incorporatec places standard metropolitan statistical areas) Appendix B provides definitions and explanations for the subjects covered in this report Appendix C explains the residence rules used in counting the population and describes the data col lection and processing procedures Appen dix D presents information on the sources of error in the data and describes the editing procedures Appendix E contains

a facsimile of the respondent instruction guide and the 1980 census questionnaire Appendix F summarizes the data dis semination program of the 1980 census

Maps which show the boundaries and identification numbers of census tracts in the area covered by this report are avail able for purchase but are not included with the report State county ounty subdivision and place names and bound aries are also shown on these maps

SYMBOLS AND GEOGRAPHIC ABBREVIATIONS

The following symbols and geographic abbreviations are used in the tables

- A dash - represents zero or a per cent which rounds to less than 0 1
- Three dots mean not applicable or that the data are being withheld to avoid disclosure of information for individuals or housing units (For further information on disclosure see the section below on Suppression of Data for Confidentiality)
- A p next to a tract number indi cates a tract split by the boundary of a place of 10 000 or more
- A (pt) next to a place name indi cates a place that is split by a county boundary
- CDP is census designated place
- SMSA is standard metropolitan sta tistical area

SUPPRESSION OF DATA FOR CONFIDENTIALITY

To maintain the confidentiality promised respondents and required by law the Bureau of the Census takes precautions to make sure that its published data do not disclose information about specific individuals and housing units To accom plish this the Census Bureau suppresses data for characteristics which are based on a small number of persons and/or housing units in the geographic area Under certain conditions both primary and complementary suppression as de fined below may take place

The general rules of primary sup pression of complete count (100-percent) data are as follows counts of total popu lation by race and Spanish origin are never suppressed other characteristics for persons are shown only if there are 15 or more persons in the geographic area counts of total housing units vacant housing units year round housing units and occupied housing units are never suppressed characteristics of year round housing units which are not classified by occupancy status are shown only when there are five or more year round housing units in the geographic area charac teristics of families households or occu pied housing units are shown only if there are at least five occupied housing units within the geographic area and distri butions of data for owners or renters are shown only where the number of owners is at least five and the number of renters is also at least five These primary sup pression criteria are applied independently of one another The comparable figures for sample data are 30 or more persons or 10 or more housing units of the specified type

Population and occupied housing unit characteristics cross-classified by race or Spanish origin (of the householder in the case of occupied housing units) are subject to an additional level of scrutiny This level requires the 15 (30) person or 5 (10) housing unit criterion be applied individually to each race or Spanish origin category

Finally complementary suppression is applied to prevent the derivation of primary suppressed data by subtraction

INTEROFFICE MEMORANDUM

TO Bryan Dixon, Chief, Solid Waste and Spill Response

DATE January 15, 1985

THRU

FROM Susan Ripley, Field Representative, District 7

SUBJECT A B Chance Company, ISW Registration No 30491

On January 9, 1985 an inspection of the subject facility was conducted A B Chance Company, 12317 Almeda Road, is no longer in operation The company was engaged in the hot dip galvanizing business The company ceased operations on March 26, 1982, at which time they began to close out an on-site acid pit During an inspection on April 23, 1982, it was discovered that the company's closure procedures were inadequate A B Chance then hired Resource Engineering, Inc (REI) to conduct a thorough investigation of the plant site, including run-off areas of possible contamination REI submitted a closure plan to Austin in July, 1982 The plan was approved by Austin in August, 1982 Closure work began on August 30 and was completed on September 3, 1982 The area was hydromulched on September 8 (See attached photo)

The writer observed closure procedures on August 30, 31, and September 3, 1982 Soil was removed from the acid pit until the approved decontamination levels for lead and chromium were reached (lead 55± 31, chromium 37± 8) A spill area west of the pit was excavated down to a flood control ditch REI submitted a certification report to the Executive Director in September, 1982 Additionally, the area, including an old pit which had been previously closed, was deed recorded as a Class I non-hazardous site

The property was purchased by Houston Export Crating Company and is now used for storage of equipment

It is recommended that A B Chance Company's registration be cancelled

By Susan Ripley

Approved Merton J Coloton

INTEROFFICE MEMORANDUM

TO George Green, Chief, Field Support Section DATE Jan 15, 1979
(file)
THRU

FROM Karen A Macko, District 7 Representative

SUBJECT A B Chance, I S W No 30491

Introduction

On December 19, 1978, the galvanizing plant was inspected with Mr Jesse Guartuche, Foreman The company had been issued a citation in February for unauthorized discharges from the spent acid holding pond into a flood control ditch and thence to Sims Bayou

Findings

Since the last inspection, the company has installed a corrugated steel roof over the holding pond eliminating direct rainfall inflow Freeboard at the time of the inspection was less than one inch The synthetic liner (repaired in February) is not secured at the top, therefore, areas where the liner slumps down into the pit allow spent acid to overflow and seep down the sides

Mr Tommy Thurman, Manager Engineer Services, was contacted on January 11, 1979 Mr Thurman stated that Chemlime had recently been out to remove spent acid The pond receives spent acid from the galvanizing tanks as well as spills and rainfall runoff collected in the building's sump system Since the sump is automatically pumped to the pond when a certain level is reached, overflows from the holding pond may still occur during heavy rains Mr Thurman stated that he was unaware of any overflows which may have occurred during the last year

Recommendations

There are no recommendations at this time

City Houston Zip 77045 County in which offense occured Harris

Telephone No AC 713 /433-2401 Date offense charged 2/1/78 2/8/78 TDWR Inspector Karen A Macko

Description of offense charged On 2/1/78, acidic wastes from a spent acid holding pond were discharging at a rate of 15 gallon/hour into a flood control drainage ditch less than 1000' north of Sims Bayou A sample was obtained and analyzed for pH and Zinc

On 2/8/78, overflow from the acid pond was again sampled Volume was estimated at 5 gallon/hour

The results are tabulated below

CITATION Issued By Billy H Biggs Date 2-17-78

This Citation directs the party business, or entity responsible for the offense charged to immediately initiate corrective measures Within ten (10) days of issuance of this Citation the responsible party business, or entity shall submit to the issuing office written notice of what corrective measures have been undertaken and the date by which such measures will be completed

A B Chance Company

Houston, Harris County

Galvanizing Waste Lagoon Closure Plan

1 0 Introduction

A B Chance Company and its predecessor operated a metal fabrication facility in a commercial/industrial area in the southern part of Houston since approximately 1957 (see Attachment No 1) As a part of the steel fabrication operations, the company operated a hot dip galvanizing facility Spent pickle liquors from the galvanizing dip tanks were collected in a clay-lined pit on the plant premises prior to off-site disposal, until it was closed under the direction of the Texas Water Quality Board in July of 1975 At that time, a second pond was installed with a synthetic liner so as to improve the on-site pickle liquor storage facilities Disposal of this material was managed under contract between a coalition of Houston area galvanizers known as Houston Industrial Environmental Control, Inc , and a transporter known as Chemline Company which delivered spent pickle liquor to the City of Houston's Northside STP for their use in sewage treatment The on-site pit was registered under TDWR procedures as a "Class I" Waste Storage Lagoon, and, since spent pickle liquor from steel finishing operations was listed as a hazardous waste under Paragraph 261 32 of RCRA (K062), a TDWR Part A permit application was submitted for an industrial solid waste storage facility in 1980

In March of 1982, the company completed negotiations to sell the site with its improvements to Houston Export Crating Company Since the purchaser does not intend to conduct galvanizing operations nor any other processes which would generate a hazardous waste, various provisions of the purchase agreement required removal of the galvanizing plant, and closure of the pickle liquor storage lagoon in accordance with TDWR rules and regulations In anticipation of this closure, A B Chance notified the Department of its intent to cease operations and, on February 18, 1982, proposed a closure plan This plan included removal of residual pickle liquor and the synthetic liner from the pit, neutralization of any acidic sludges from the bottom of the pit, backfill to natural grade, and final approval by the TDWR of closure The initial portions of this plan were, in fact, implemented prior to receipt of a letter from the TDWR on April 30, 1982 requesting additional information as required under Texas Administration Code Section 335 213 (a) for closure of a hazardous waste facility Resource Engineering was retained in May of this year to assist A B Chance in providing additional data and developing a closure plan which would satisfy the applicable TDWR regulations relating thereto This report, together with its attachments, presents the revisions to the original closure plan filed by the company on February 18, 1982, and proposes a schedule for its implementation

The Texas Department of Water Resource records were examined for all recorded water wells within a one-mile radius of the site Records for 11 wells (see Attachment No 4 for the individual well records) were found within this area at the approximate locations shown on Figure 4A Seven of these wells were designated for industrial usage and the remaining four for domestic usage As indicated on Table 3-5, six of these wells were screened in the general interval between 70 and 100 feet below the original ground surface, two wells in the interval of 170 - 240 feet and three wells in the interval 310 - 450 feet

These screen interval levels are signficantly below the bottom depth of the existing and abandoned pits Furthermore the individual drilling logs also indicate that the bottom of the pits are separated from these screen intervals by numerous clay layers which would act to isolate the water-producing strata from these pits

3 2 2 Site Geology and Hydrology - Three soil borings were advanced using a rotary drill auger rig at the locations shown in Attachment No 2 A geotechnical report, describing the drilling, sampling, and testing techniques utilized to establish subgrade conditions is presented in Attachment No 5 and is summarized by Table 3-6

Table 3-6

Generalized Soil Conditions

Depth Below Existing Groundsurface	Material El
0 - (2' - 8')	Fill SILTY S CLAY
(2' - 8') - 20	Fill CLAY (CH)
20' - (22' - 28')	SILT (ML)
(26' - 28') - 30'	SILTY CLAY to CLAY (CL-CH)

Borings B-1 and B-3 were drilled through the first water bearing stratum as shown in Attachment No 5, and completed in a clay zone beneath this stratum Groundwater samples from these open borings were obtained upon completion, and again several days later, and analyzed as shown in Table 3-7

TABLE 3-7

Shallow Silt Groundwater Quality

Parameter (mg/l)	B-1 5/14	B-1 5/17	B-3 5/14	B-3 5/17
pH	6 5	6 5	6 5	6 5
Total Dissolved Solids	1,616	1,931	1,901	1,944
Conductivity	2,330	3,060	2,760	2,880
Sulfate	1,265	1,440	1,545	1,190
Total Organic Carbon	65	59	32	54
Cadmium	0 01	0 01	0 01	0 01
Lead	0 01	0 01	0 01	0 01
Manganese	0 10	0 10	0 10	0 10
Zinc	0 10	0 38	1 43	0 62
Total Chromium	0 01	0 01	0 01	0 01
Hex Chromium	0 01	0 01	0 01	0 01

The subsurface hydrological gradient observed from water level measurements in these two borings indicated a general direction of flow to the south

3 2 3 Closed Pit Evaluation - Four auger borings were advanced in the area of the closed pickle liquor pit in order to evaluate

3 2 4 4 The water bearing stratum evaluated for potential groundwater contamination is a very fine silt, through which significant quantites of groundwater are not likely to migrate The groundwater data given by Table 3-7, although indicating marginal drinking water quality, did not indicate significant contamination of even this upper zone Also, since these borings were not cased and developed as true groundwater monitor wells, some slight contamination from surface sediments could have occurred

3 2 4 5 Producing groundwater wells currently being utilized within a reasonable distance from the site withdraw water from strata well below the silt zone evaluated Additional clay barriers exist between usable groundwater and this silt zone, and there are no known beneficial uses for the water within that zone

The overall conclusion reached, therefore, is that there has been no groundwater contamination due to the operations conducted at the A B Chance facilities and that potential for future groundwater contamination is negligible

3 3 Potential For Surface Water Contamination - The site is located adjacent to a stormwater channel which discharges into Simms Bayou approximately 1,000 feet downstream Drainage from the site enters this

ditch, thence to Simms Bayou, thence to Segment No 1006 of the Houston Ship Channel in the San Jacinto River Basin This segment is not deemed desirable for any of the designated beneficial uses of the water, and has no restrictions on most contaminants Potential stormwater runoff from the facility was, therefore, evaluated only under the TDWR "Heavy Metals Order" as follows

3 3 1 Areas From Which Soils Contaminated by Hazardous Wastes Have Been Removed

As described in Section 2 0 of this report, all underlying and surrounding soils contaminated with hazardous waste K062 will be removed for disposal as a part of site closure Testing has shown, however, that upon removal of those soils given in Table 3-4, soil pH values between 4 and 5, and elevated concentrations of zinc and manganese may exist The expected levels of these constituents is given by Table 3-9 as follows

Attachment No 5

Geotechnical Report

1 0 Site Location

The proposed site is located on A B Chance property approximately two miles south of Loop 610 South in Houston, Texas The site is located at 12317 Almeda Road as shown on the Boring Location Plan in Attachment No 2

2 0 Area Geology

The site of the proposed structure is underlain by the Beaumont formation, a deltaic nonmarine Pleistocene deposit The Beaumont formation is a heterogeneous formation, containing interbedded layers of clay, fine sand, and silt

The clay fraction is primarily composed of montmorillonite, illite, kaolinite, and finely ground quartz The clay in the formation has been preconsolidated by a process of desiccation The sands and silts, which vary in compactness from loose to very dense, are composed of quartz, feldspars, large particles of kaolinite, calcite, and occasionally hornblende

REI

The coastal plain in this region has a complex tectonic geology, several major features of which are Gulf Coast geosyncline, salt domes, major sea level fluctuations during the glacial stages, subsidence and faulting activities Most of these faulting activities have ceased for millions of years, but some are still active A faulting study, however, was beyond the scope of this investigation

3 0 Regional Geology

3 1 Physiography

The site is located within the Coastal Plain, which in the Houston area is mainly flat to slightly rolling and sloping seaward Coastal Plain sediments of Pleistocene Age were deposited forming a Fluvial-Deltaic system by formerly and presently active geologic processes

3 2 Lithology and Stratigraphy

The sediment deposits which form the Houston area belong chiefly to the Quaternary system The Quaternary are the youngest in geologic age and in the area of concern to the site are considered as distributary and fluvial sands, silt, sandy clays including levee and crevasse splay deposits

SUBJECT Ground Water and Surface Water Use - City of Houston

SUMMARY OF COMMUNICATION

Q Where does the public water supply for the study area in the City of Houston come from?

A Drinking water for that area is a mixture of surface water and ground water Surface water comes from Lake Houston, 17 miles north Ground water comes from City of Houston water supply wells, four of which are located within four miles of your area of concern Central #19, Central #20, Central #21 and Scott Street #6 Approximately 60% comes from surface water and 40% from groundwater (see attachment)

Q What are the uses of Buffalo Bayou?

A Buffalo Bayou is primarily a storm sewer outlet with limited recreational uses - such as canoeing There is no surface water withdrawn from Buffalo Bayou for public water supply use in the City of Houston It is not used for irrigation either

SUBJECT Sensitive Environments alorg Buffalo Bayou and Sims Bayou

SUMMARY OF COMMUNICATION

Q Are there any critical habitats of Endangered Species or other sensitive environments along Buffalo Bayou in the City of Houston?

A No There are no federally designated critical habaitats for endangered species along Buffalo Bayou The edges of the bayou are fairly industrialized, so there are no federally designated sensitive environments along the banks The only endangered species found in Houston is Hymenoxys texana, a k a Prairie Dawn, but it is unlikely that the plant would be found alonr Sims or Buffalo Bayou

REPORT 190

ANALOG MODEL STUDIES OF GROUND WATER HYDROLOGY IN THE HOUSTON DISTRICT TEXAS

By

Donald G Jorgensen
U S Geological Survey

This report was prepared by the U S Geological Survey
under cooperative agreement with the
Texas Water Development Board
and the City of Houston

February 1975

Second Printing
August 1975

ANALOG MODEL STUDIES OF GROUND WATER HYDROLOGY IN THE HOUSTON DISTRICT TEXAS

INTRODUCTION

Purpose and Scope of the Project

Continual declines of water levels in wells land surface subsidence and salt water encroachment are problems related to ground water pumping in the Houston district that necessitate additional studies of the hydrologic system

This study was begun in 1970 by the U S Geological Survey in cooperation with the city of Houston and the Texas Water Development Board The principal purpose was to develop a means for forecasting declines in the altitudes of the potentiometric surfaces (levels to which water will rise in tightly cased wells) under various conditions of pumping Because of the complexity of the hydrologic system an electric analog model was chosen as the most suitable device for analyzing the system and simulating future responses

This report presents the results of the geologic and hydrologic studies discusses the theory and construction of the analog model and presents the simulation of the declines in the altitudes of the potentiometric surfaces as determined by using the model

Most of the data upon which this report is based are available in reports by the U S Geological Survey and the Texas Water Development Board (see references) or in the files of the U S Geological Survey in Houston Data are obtained through a continuing cooperative program of the U S Geological Survey the Texas Water Development Board the city of Houston and the city of Galveston

For those readers interested in using the metric system metric equivalents of English units of measurements are given in parentheses The English units used in this report may be converted to metric units by the following conversion factors

From		Mutiply by	To obtain	
Unit	Abbre viation		Unit	Abbre viation
cub c foot	ft^3	0 028317	cubic meter	m^3

nch	n	2 540	cent meter	cm
m llion gallons	10^6 gal	3 785	cub c meters	m^3
square m le	m	2 590	square k lometer	km

Description of the Area

The Houston district as used in this report consists of all of Harris Waller and Fort Bend Counties and parts of Galveston Montgomery Brazoria Chambers and Liberty Counties (Figure 1) The area of the district is approximately 6 600 square miles (17 100 square kilometers)

Figure 1 —Location and Extent of the Houston District

Except for a small area in Montgomery and Waller Counties the land surface is nearly flat and featureless

the only significant relief is in the valleys of the streams The land is generally treeless in the rural areas from Houston southeast to Galveston

The climate of the Houston district is characterized by mild winters and hot summers The lowest temperature recorded at Houston was 15 F (9 5 C) and the maximum temperature was 108 F (42 C) The mean annual temperature is 69 2 F (20 6 C) The 30 year average (1931 60) rainfall at Houston was 45 95 inches (116 7 centimeters) monthly rainfall is distributed uniformly throughout the year

The Houston district has a large and diversified industrial economy but also has extensive agricultural developments Large amounts of water are used by industry for processing and cooling purposes and by rice and cotton growers for irrigation The rapid growth and development of the district are due in part to the availability of large amounts of inexpensive ground water supplies The locations of the major pumping areas are shown on Figure 2

Previous Studies

Among the more comprehensive earlier reports describing the geology and hydrology of the Houston district is the report by Lang and others (1950) Pettit and Winslow (1957) summarized the geology and ground water resources of Galveston County The relation of salt water to fresh ground water in Harris County was discussed by Winslow and others (1957) Land surface subsidence and its relation to the withdrawal of ground water in the Houston Galveston area was first reported by Winslow and Doyel (1954) and later by Gabrysch (1969)

Previous ground water investigations were made in Waller County (Wilson 1967) Liberty County (Anders and others 1968) Montgomery County (Popkin 1971) Fort Bend County (Wesselman 1972) Brazoria County (Sandeen and Wesselman 1973) and Chambers County (Wesselman 1971) These studies provided relatively recent data on the ground water resources and ground water development in most of the Houston district exclusive of Harris and Galveston Counties

A report containing data on ground water withdrawals and water level declines in Galveston and Harris Counties was prepared by Gabrysch (1972) and the role of groundwater in the development of the water system for the city of Houston was described in reports by Turner Collie and Braden Inc (1966 1972)

A report by Wood and Gabrysch (1965) describes the results of the first analog model study of ground water hydrology in the Houston district The usefulness of the first analog model was limited because the simulations required that the aquifers be operated independently of each other and because the results of pumping in the western part of the area could not be simulated Evaluation of the performance of the first model indicated that improvement in aquifer designation was needed and that the transmissivity of the aquifers and vertical leakage between the aquifers were not adequately modeled

Acknowledgments

The author expresses his appreciation to Mr D E VanBuskirk of the city of Houston Water Department and to the well owners and drillers who supplied pertinent information for this study The aquifers in the district were mapped by John Wesselman U S Geological Survey and the model was designed and constructed by William Bruns U S Geological Survey

GEOHYDROLOGY

The geologic formations from which most of the ground water is pumped in the Houston district are composed of sedimentary deposits of gravel sand silt and clay The formations from oldest to youngest that form important hydrologic units are The Catahoula Sandstone and Fleming Formation of Miocene age the Goliad Sand of Pliocene age the Willis Sand Bentley and Montgomery Formations and Beaumont Clay of Pleistocene age and alluvium of Quaternary age (Table 1) Correlation of the hydrologic units from northern Montgomery County to the Gulf of Mexico is shown by the chart on Figure 3

With exception of the alluvium and the Goliad Sand the formations crop out in belts that are nearly parallel to the shoreline of the Gulf of Mexico The younger formations crop out nearer the Gulf and the older ones farther inland All the formations thicken downdip so that the older formations dip more steeply than the younger ones Locally however the occurence of salt domes and faults may cause reversals of the regional dip and thickening or thinning of individual beds

Salt domes are cylindrical structures resulting from the upward movement of salt masses that are probably of Mesozoic age In some areas the salt domes penetrate the uppermost aquifer and nearly reach the surface In

most instances however he domes pierce only the lower aquifers Ground water circulation within the vicinity of the domes may result in salt water contamination

Faults in the area may have several hundred feet of displacement in the older Tertiary formations but displacement tends to decrease upward so that the faulting may not be apparent at the surface generally the geologic units containing fresh water are not displaced enough to disrupt hydraulic continuity

Description of the Water Bearing Units

Chicot Aquifer

The Chicot aquifer is composed of the Willis Sand Bentley Formation Montgomery Formation Beaumont Clay and Quaternary alluvium (Table 1) The Chicot includes all deposits from the land surface to the top of the Evangeline aquifer (Figure 4)

The basis for separating the Chicot aquifer from the underlying Evangeline aquifer is primarily a difference in hydraulic conductivity which in part causes the difference in the altitudes of the potentiometric surfaces in the two aquifers

In most of the Houston district the Chicot aquifer consists of discontinuous layers of sand and clay of about equal total thickness and in some parts of the district the aquifer can be separated into an upper and lower unit Throughout most of Galveston County and southeast Harris County the basal part of the lower Chicot aquifer is formed by a massive sand section with high hydraulic conductivity (See Figure 4) This sand unit which is heavily pumped is known locally as the Alta Loma Sand In many previous reports the unit is identified as the Alta Loma Sand of Rose (1943) The term Alta Loma Sand is not often used in this report because the stratigraphic relationships are not clear

If the upper unit of the Chicot aquifer cannot be defined in a particular area the aquifer is said to be undifferentiated The areal extent of the upper unit roughly corresponds to the areal extent of the Beaumont Clay The areas in which the aquifer cannot be differentiated into units are mostly in the northern part of the district (Figure 5)

Wells that are completed in the uppermost sand layers of the Chicot aquifer and that have water levels that are distinctly higher than water levels in wells completed in the underlying sand layers are considered to produce water from the upper unit

The transmissivity of the Chicot aquifer ranges from zero to about 20 000 ft /day (feet squared per day) or 1 858 m /day (meters squared per day) The storage coefficient ranges from 0 0004 to 0 20 (Figure 6) The larger values of the storage coefficient occurs in the northern part of the district where the aquifer is partly or totally under water table conditions

Evangeline Aquifer

The Evangeline aquifer which is the most important source of fresh ground water in the Houston metropolitan area consists of layers of sand and clay that are present throughout the district except where the unit is pierced by salt domes (Figure 7) The aquifer is underlain by the Burkeville confining layer

The transmissivity of the Evangeline aquifer ranges from less than 5 000 ft /day (460 m /day) to about 15 000 ft^2/day (1 400 m /day) (See Figure 8) In general the horizontal hydraulic conductivity of the Evangeline aquifer is less than the horizontal hydraulic conductivity of the Chicot aquifer but because the Evangeline is generally thicker than the Chicot it is generally more transmissive

The storage coefficient of the Evangeline ranges from about 0 0005 to 0 0002 where it occurs under artesian conditions in the outcrop area where the aquifer is under water table conditions the storage coefficient ranges from greater than 0 002 to 0 20

Burkeville Confining Layer

The Burkeville confining layer which in the outcrop area is in the upper part of the Fleming Formation of Tertiary age is composed mostly of clay but contains some layers of sand The Burkeville restricts the flow of water except where it is pierced by salt domes and in the northeastern part of the district where it contains many water yielding sand layers The Burkeville is underlain by the Jasper aquifer

Declines in the Altitudes of the Potentiometric Surfaces

Records of ground water withdrawals in the Houston district date back to 1887 and records exist for probably 90 percent of the total withdrawals

Use of ground water increased slowly until about 1937 when rapid industrialization increased the rate of use In 1955 surface water from the San Jacinto River (Lake Houston) became available and the use of ground water remained relatively constant until 1962 From 1962 to 1970 the use of ground water increased to about 575 mgd (million gallons per day) or 2 2 million m^3/day (cubic meters per day) The historic withdrawals of ground water for 1890 1970 and the predicted withdrawals for 1971 80 are shown on Figure 9

The pumping of large quantities of ground water has caused large declines in the altitudes of the potentiometric surfaces in the aquifers except in the upper unit of the Chicot The declines from 1890 to 1953 from 1890 to 1960 and from 1890 to 1970 in the lower unit of the Chicot aquifer and in the Chicot aquifer undifferentiated are shown on Figures 10 11 and 12 Figures 13 14 and 15 show the decline of the altitude of the potentiometric surface in the Evangeline aquifer for the same periods

By 1970 the altitude of the potentiometric surface had declined a maximum of about 330 feet (100 meters) in the lower unit of the Chicot aquifer and Chicot aquifer undifferentiated and about 430 feet (130 meters) in the Evangeline aquifer

Not enough data are available to map the decline of the altitude of the potentiometric surface in the upper unit of the Chicot aquifer

Houston Area

Nearly all the ground water pumped in the Houston area (Figure 2) is from wells screened in the Evangeline or Chicot aquifers and many of the wells are screened in both aquifers (The reader should note that the Houston area is only a part of the Houston district) The declines of water levels in wells screened in each of the aquifers are shown on Figure 16 Locations of the wells are shown on Figure 2

Declines in the Evangeline aquifer and the lower unit of the Chicot aquifer have been the greatest The upper unit of the Chicot is relatively undeveloped therefore the decline of water levels shown on Figure 16 for the upper unit of the Chicot is due in part to the discharge of water to the lower unit

Pasadena Area

The Pasadena area is an industrialized area east of the Houston area and mostly west of the San Jacinto River (Figure 2) Most of the ground water pumped in this area is from the Evangeline aquifer but a considerable amount is withdrawn from the lower unit of the Chicot in the southeastern part of the area A small and mostly unrecorded amount is pumped from the upper unit of the Chicot

Figure 17 shows the decline of water levels in three wells each of which is screened in a different water bearing unit The decline of the altitude of the potentiometric surface in the upper unit of the Chicot is not as great as the decline in either the Evangeline or the lower unit of the Chicot The decline in the upper unit of the Chicot is attributed to discharge to the lower unit and to a small amount of pumping

Katy Area

The Katy area is an agricultural area west of the Houston area and includes the northern and western parts of Harris County about half of Waller County and northern Fort Bend County (Figure 2)

Ground water is used exclusively in the Katy area and most of it is used for rice irrigation Most of the water pumped is from the lower unit of the Chicot aquifer the Chicot aquifer undifferentiated and the Evangeline aquifer In the northern part of Fort Bend County along the Brazos River some water is pumped from the alluvium which is a part of the upper unit of the Chicot aquifer

Figure 18 shows the water level declines in well LJ 65 04 507 completed in the Chicot aquifer undifferentiated and in well LJ 65 04 607 completed in the Evangeline aquifer Declines are greater in wells screened in the Evangeline aquifer than in wells screened in the Chicot aquifer undifferentiated

Baytown LaPorte Area

The Baytown LaPorte area extends eastward from the Pasadena area to the Chambers County line (Figure 2) It is primarily an industrial area in which most of the ground water used is pumped from the lower unit of the Chicot aquifer

Figure 19 shows the water level declines in well LJ 65 24 606 screened in the Evangeline aquifer and in well LJ 65 24 501 screened in the lower unit of the Chicot aquifer Although most withdrawals in the area are from the lower unit of the Chicot the rate of decline in the Evangeline is nearly as large as the decline in the lower unit of the Chicot

a result of pumping The northern part of the district also has the highest vertical leakage which allows water to move easily from the surface to the Chicot aquifer

Limitations on Use of the Analog Model

The values of the parameters modeled are rational values for the hydrologic system Further investigation and new data will allow refinements to be made and will allow more accurate determination of the values for the parameters modeled

The model was not designed to simulate the effects of one well over a short period of time The model was designed to simulate the effects of withdrawal of water from a well field for periods of a year or longer

The model was not designed to predict subsidence accurately although the simulation of clay compaction was included Declines in the altitudes of the potentiometric surfaces are simulated and these values can be used in calculations to predict subsidence

Caution should be used in applying the modeled values in equations to predict short term specific capacity of an individual well The model simulates leaky aquifer conditions with clay storage for time intervals greater than 1 year

Data Required for Improvement of the Model

Observation wells that are screened in only one water bearing unit are needed for better calibration of the model The areas where measurements from such observation wells are needed are determined easily by noting the areas in which no potentiometric measurements are shown on Figures 12 and 15

The accuracy of the model could be improved by better delineation of the water bearing sands above the basal sand (Alta Loma Sand of Rose 1943) of the lower unit of the Chicot in the Texas City area To improve the correlation of observed and measured declines in the altitude of the potentiometric surface in the Texas City area it was necessary to program extra pumpage

More data are needed on the quantity of ground water pumped for irrigation in the vicinity of Dayton and Liberty and on the quantity of water discharged from flowing and pumped wells prior to 1930 in Galveston County

The model could be modified to simulate clay compaction more accurately if the storage coefficient for clay compaction is determined accurately for each aquifer In the present model the storage coefficient for clay compaction is modeled as existing entirely between the land surface and the centerline of the lower unit of the Chicot aquifer and the Chicot aquifer undifferentiated To distribute the storage coefficient accurately more data concerning the characteristics of these clay layers are needed These data can be obtained from consolidation tests on core samples records of clay compaction from compaction recorders and possibly from studies of various types of geophysical logs

The present model could be modified to be one of the elements of a hybrid analog-digital model that could be used for detailed studies of such problems as salt water encroachment and land surface subsidence

SUMMARY

The Houston district has two major aquifers above the Burkeville confining layer The uppermost aquifer is the Chicot aquifer which consists of sand and clay layers that dip gently toward the Gulf of Mexico In places in the Houston district the Chicot aquifer can be separated into an upper and a lower unit

The upper unit which is not an important source of water for most of the district can be defined where the altitude of the potentiometric surface differs from the altitude of the potentiometric surface in the lower unit Where the upper unit cannot be defined the aquifer is said to be undifferentiated

The Evangeline aquifer which is the major aquifer in the district underlies the Chicot aquifer and consists of sand and clay layers that dip toward the Gulf of Mexico

The Burkeville confining layer consists mostly of clay layers that form an effective barrier to ground water flow at nearly all locations except at and near the outcrop of the Evangeline aquifer in Montgomery County

The large cones of depression in the potentiometric surfaces in the lower unit of the Chicot aquifer the Chicot aquifer undifferentiated and the Evangeline aquifer are caused by large withdrawals of water Water now flows toward the center of these cones creating a reversal of the original hydraulic gradient in most areas south of Houston This reversal of the hydraulic gradient has resulted in salt water encroachment toward the centers of the cones but
