Kevin,

I thought that you should see this. The site that we were talking about the other day is the Tower Standard site.

Subject: Lac du Flambeau LUST site- Tower Standard

Hi John,

It has been a long time since we communicated. I hope all is well with you.

There is a LUST site on the LDF Reservation which was closed by DNR several years ago. I believe that it is the Tower Standard site located at Highway 70 and County Road D. According to some recent information from the Tribe, there is substantial contamination remaining at the site which may necessitate additional remediation. The situation is somewhat complicated since there has been more than one LUST site near this intersection. From what I have seen so far, it would appear that the site located on what is now a seasonal bait shop on the south side of Highway 70 is responsible for the contamination found by the Tribe in a recent investigation. High levels of BTEX compounds exist 40-50 feet bgs which threaten private wells and an adjacent lake.

The Tribe has asked for our assistance, which we may be able to provide through our LUST

Trust Fund. However, we would like to explore the possibility of having the site re-opened by the State, and the process for doing so.

Please let me know when you are available in the near future to discuss the site and next steps.

Thank you.

Regards,

Bob
