Karen,

Please create new section posting the attached Notice of Violation dated August 7, 2017.

Let me know if you have any questions.

Thanks,

Patrick

Yvette/Karen –

This is a time sensitive post that needs to be made on the S.H. Bell website next week. My manager, *Sarah Marshall*, will let you know when it is time to post.

We are waiting for the RA's approval, which should come Monday afternoon, and then we will need to post as soon as possible. Attached to this file is a PDF of the website where the edits need to be made. I promised Yvette I would try to make it easier ☺

All excel files are attached. If there are edits to the language below Sarah Marshall or Josh Singer will let you know.

LANGUAGE TO ADD, BELOW "Air Monitor Data" HEADING:

EPA has found manganese levels that exceed the health-based screening level at the S.H. Bell facility in Chicago. Four months of PM10 metals air monitoring data from the S.H. Bell facility for March 1, 2017, through June 30, 2017, show an average concentration of 0.32 ug/m3 of manganese. The Minimal Risk Level for chronic inhalation exposure to manganese is 0.3 ug/m3. EPA has reached out to the Illinois Environmental Protection Agency, the Agency for Toxic Substances and Disease Registry, the City of Chicago and community groups to notify them of the levels and coordinate a response. EPA is committed to protecting public health by ensuring S.H. Bell complies with the Clean Air Act.

Please call me if there are questions, I will not be at my desk Monday-Wednesday next week.

Thanks.

Molly Smith
