Total solids	%	**95.0**	**76.2**	**81.5**	**83.7**	**85.9**

Notes
< - Less than reported value.
> - Greater than reported value.
B - Estimated concentration (Inorganics).
B - Compound was found in the blank and sample (Organics).
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.
P - The %RPD between the primary and confirmation column/detector is
R - Rejected.
U - Not detected at the associated reporting limit.
UJ - Not detected; associated reporting limit is estimated.
- - Not applicable.

Notes
< - Less than reported value.
B - Estimated concentration (Inorganics).
B - Compound was found in the blank and sample (Organics).
E - Estimated because of the presence of interference (Inorganics).
J - Estimated concentration.
P - The %RPD between the primary and confirmation column/detector is >40%.
R - Rejected.
U - Not detected at the associated reporting limit.
UJ - Not detected; associated reporting limit is estimated.
W - Unknown description
X - Unknown description
- - Not applicable.

Notes
< - Less than reported value.
B - Estimated concentration (Inorganics).
B - Compound was found in the blank and sample (Organics).
D - Compounds at secondary dilution factor.
E - Estimated because of the presence of interference (Inorganics).
E - Exceed calibration range of GC/MS instrument (Organics).
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.
P - The %RPD between the primary and confirmation column/detector is >40%. The
R - Rejected.
U - Not detected at the associated reporting limit.
UJ - Not detected; associated reporting limit is estimated.
W - Unknown description
X - Unknown description
- - Not applicable.

Total solids	%	-	-	-	-	-	-	-

Notes
< - Less than reported value.
B - Estimated concentration (Inorganics).
B - Compound was found in the blank and sample (Organics).
D - Compounds at secondary dilution factor.
E - Estimated because of the presence of interference (Inorganics).
E - Exceed calibration range of GC/MS instrument (Organics).
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.
P - The %RPD between the primary and confirmation column/detector is >40%. The
R - Rejected.
U - Not detected at the associated reporting limit.
UJ - Not detected; associated reporting limit is estimated.
W - Unknown description
X - Unknown description
- - Not applicable.

Parameters	**Units**							
Total solids	%	-	-	-	-	-	-	-

Notes
< - Less than reported value.
B - Estimated concentration (Inorganics).
B - Compound was found in the blank and sample (Organics).
D - Compounds at secondary dilution factor.
E - Estimated because of the presence of interference (Inorganics).
E - Exceed calibration range of GC/MS instrument (Organics).
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.
P - The %RPD between the primary and confirmation column/detector is >40%. The
R - Rejected.
U - Not detected at the associated reporting limit.
UJ - Not detected; associated reporting limit is estimated.
W - Unknown description
X - Unknown description
- - Not applicable.

Parameters	**Units**							
Total solids	%	-	-	-	-	-	-	-

Notes
< - Less than reported value.
B - Estimated concentration (Inorganics).
B - Compound was found in the blank and sample (Organics).
D - Compounds at secondary dilution factor.
E - Estimated because of the presence of interference (Inorganics).
E - Exceed calibration range of GC/MS instrument (Organics).
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.
P - The %RPD between the primary and confirmation column/detector is >40%. The
R - Rejected.
U - Not detected at the associated reporting limit.
UJ - Not detected; associated reporting limit is estimated.
W - Unknown description
X - Unknown description
- - Not applicable.

		Duplicate						
Parameters	**Units**							
Total solids	%	-	-	-	-	-	-	-

Notes
< - Less than reported value.
B - Estimated concentration (Inorganics).
B - Compound was found in the blank and sample (Organics).
D - Compounds at secondary dilution factor.
E - Estimated because of the presence of interference (Inorganics).
E - Exceed calibration range of GC/MS instrument (Organics).
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.
P - The %RPD between the primary and confirmation column/detector is >40%. The
R - Rejected.
U - Not detected at the associated reporting limit.
UJ - Not detected; associated reporting limit is estimated.
W - Unknown description
X - Unknown description
- - Not applicable.

Total solids	%	-	-	-	-	-	-	-	-	-	-	-

Notes
< - Less than reported value.
B - Estimated concentration (Inorganics).
B - Compound was found in the blank and sample (Organics).
D - Compounds at secondary dilution factor.
E - Estimated because of the presence of interference (Inorganics).
E - Exceed calibration range of GC/MS instrument (Organics).
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.
P - The %RPD between the primary and confirmation column/detector is >40%. The
R - Rejected.
U - Not detected at the associated reporting limit.
UJ - Not detected; associated reporting limit is estimated.
W - Unknown description
X - Unknown description
- - Not applicable.

Parameters	**Units**								
Total solids	%	-	-	-	-	-	-	-	-

Notes
< - Less than reported value.
B - Estimated concentration (Inorganics).
B - Compound was found in the blank and sample (Organics).
D - Compounds at secondary dilution factor.
E - Estimated because of the presence of interference (Inorganics).
E - Exceed calibration range of GC/MS instrument (Organics).
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.
P - The %RPD between the primary and confirmation column/detector is >40%. The
R - Rejected.
U - Not detected at the associated reporting limit.
UJ - Not detected; associated reporting limit is estimated.
W - Unknown description
X - Unknown description
- - Not applicable.

Notes
< - Less than reported value.
B - Estimated concentration (Inorganics).
B - Compound was found in the blank and sample (Organics).
D - Compounds at secondary dilution factor.
E - Estimated because of the presence of interference (Inorganics).
E - Exceed calibration range of GC/MS instrument (Organics).
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.
P - The %RPD between the primary and confirmation column/detector is >40%. The
R - Rejected.
U - Not detected at the associated reporting limit.
UJ - Not detected; associated reporting limit is estimated.
W - Unknown description
X - Unknown description
- - Not applicable.

Notes
< - Less than reported value.
B - Estimated concentration (Inorganics).
B - Compound was found in the blank and sample (Organics).
D - Compounds at secondary dilution factor.
E - Estimated because of the presence of interference (Inorganics).
E - Exceed calibration range of GC/MS instrument (Organics).
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.
P - The %RPD between the primary and confirmation column/detector is >40%. The
R - Rejected.
U - Not detected at the associated reporting limit.
UJ - Not detected; associated reporting limit is estimated.
W - Unknown description
X - Unknown description
- - Not applicable.

Parameters	**Units**						
Total solids	%	-	-	-	-	-	-

Notes
< - Less than reported value.
B - Estimated concentration (Inorganics).
B - Compound was found in the blank and sample (Organics).
D - Compounds at secondary dilution factor.
E - Estimated because of the presence of interference (Inorganics).
E - Exceed calibration range of GC/MS instrument (Organics).
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.
P - The %RPD between the primary and confirmation column/detector is >40%. The
R - Rejected.
U - Not detected at the associated reporting limit.
UJ - Not detected; associated reporting limit is estimated.
W - Unknown description
X - Unknown description
- - Not applicable.

Parameters	**Units**						
Total solids	%	-	-	-	-	-	-

Notes
< - Less than reported value.
B - Estimated concentration (Inorganics).
B - Compound was found in the blank and sample (Organics).
D - Compounds at secondary dilution factor.
E - Estimated because of the presence of interference (Inorganics).
E - Exceed calibration range of GC/MS instrument (Organics).
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.
P - The %RPD between the primary and confirmation column/detector is >40%. The
R - Rejected.
U - Not detected at the associated reporting limit.
UJ - Not detected; associated reporting limit is estimated.
W - Unknown description
X - Unknown description
- - Not applicable.

Notes
< - Less than reported value.
B - Estimated concentration (Inorganics).
B - Compound was found in the blank and sample (Organics).
D - Compounds at secondary dilution factor.
E - Estimated because of the presence of interference (Inorganics).
E - Exceed calibration range of GC/MS instrument (Organics).
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.
P - The %RPD between the primary and confirmation column/detector is >40%. The
R - Rejected.
U - Not detected at the associated reporting limit.
UJ - Not detected; associated reporting limit is estimated.
W - Unknown description
X - Unknown description
- - Not applicable.

Notes
< - Less than reported value.
B - Estimated concentration (Inorganics).
B - Compound was found in the blank and sample (Organics).
D - Compounds at secondary dilution factor.
E - Estimated because of the presence of interference (Inorganics).
E - Exceed calibration range of GC/MS instrument (Organics).
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.
P - The %RPD between the primary and confirmation column/detector is >40%. The
R - Rejected.
U - Not detected at the associated reporting limit.
UJ - Not detected; associated reporting limit is estimated.
W - Unknown description
X - Unknown description
- - Not applicable.

Notes
< - Less than reported value.
B - Estimated concentration (Inorganics).
B - Compound was found in the blank and sample (Organics).
D - Compounds at secondary dilution factor.
E - Estimated because of the presence of interference (Inorganics).
E - Exceed calibration range of GC/MS instrument (Organics).
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.
P - The %RPD between the primary and confirmation column/detector is >40%. The
R - Rejected.
U - Not detected at the associated reporting limit.
UJ - Not detected; associated reporting limit is estimated.
W - Unknown description
X - Unknown description
- - Not applicable.

Notes
< - Less than reported value.
B - Estimated concentration (Inorganics).
B - Compound was found in the blank and sample (Organics).
D - Compounds at secondary dilution factor.
E - Estimated because of the presence of interference (Inorganics).
E - Exceed calibration range of GC/MS instrument (Organics).
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.
P - The %RPD between the primary and confirmation column/detector is >40%. The
R - Rejected.
U - Not detected at the associated reporting limit.
UJ - Not detected; associated reporting limit is estimated.
W - Unknown description
X - Unknown description
- - Not applicable.

Parameters	**Units**								
Total solids	%	-	-	-	-	-	-	-	-

Notes
< - Less than reported value.
B - Estimated concentration (Inorganics).
B - Compound was found in the blank and sample (Organics).
D - Compounds at secondary dilution factor.
E - Estimated because of the presence of interference (Inorganics).
E - Exceed calibration range of GC/MS instrument (Organics).
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.
P - The %RPD between the primary and confirmation column/detector is >40%. The
R - Rejected.
U - Not detected at the associated reporting limit.
UJ - Not detected; associated reporting limit is estimated.
W - Unknown description
X - Unknown description
- - Not applicable.

Parameters	**Units**			
Total solids	%	-	-	-

Notes
< - Less than reported value.
B - Estimated concentration (Inorganics).
B - Compound was found in the blank and sample (Organics).
D - Compounds at secondary dilution factor.
E - Estimated because of the presence of interference (Inorganics).
E - Exceed calibration range of GC/MS instrument (Organics).
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.
P - The %RPD between the primary and confirmation column/detector is >40%. The
R - Rejected.
U - Not detected at the associated reporting limit.
UJ - Not detected; associated reporting limit is estimated.
W - Unknown description
X - Unknown description
- - Not applicable.

1332-21-4	Asbestos	ND	ND	%	--	0/3	0.25	N/A	--		N	ND

Notes:

(1) Minimum/maximum detected concentration.
(2) Based on data collected from sampling locations: SS-37, SS-38, SS-39, SS-40, SS-41, SS-42, SS-43, SS-44, SS-45, SS-122, SS-124, SS-153-AS, SS-154-AS, SS-155-AS, TT-16.
(3) Regional Screening Level (RSL) Summary Table (TR = 1E-06, HI = 0.1) , Residential Soil, November 2018.
(4) Rationale Codes
Selection Reason: Maximum detected above Screening Value (ASV)
Analyte Detected and no Screening Value available (AD)
Deletion Reason: Maximum detected below Screening Value (BSV)
Naturally Occurring (NAT)
(5) No screening value available, surrogate screening value implemented as follows:

Chemical	Surrogate
1,3-dichlorobenzene	1,2-dichlorobenzene
methyl cyclohexane	cyclohexane
3&4-methylphenol	3-methylphenol
acenaphthylene	acenaphthene
benzo(g,h,i)perylene	pyrene
phenanthrene	pyrene
dimethylphthalate	diethylphthalate

Defintions:

-- = Not Available
N = Noncarcinogen
C = Carcinogen
Y = Yes
N = No
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.

Notes:

(1) Minimum/maximum detected concentration.
(2) Based on data collected from sampling locations: SS-14, SS-15, SS-16, SS-17, SS-18, SS-148, SS-152, SS-156-AS, SS-157-AS.
(3) Regional Screening Level (RSL) Summary Table (TR = 1E-06, HI = 0.1) , Residential Soil, November 2018.
(4) Rationale Codes

Selection Reason: Maximum detected above Screening Value (ASV)
Analyte Detected and no Screening Value available (AD)
Deletion Reason: Maximum detected below Screening Value (BSV)
Naturally Occurring (NAT)

(5) No screening value available, surrogate screening value implemented as follows:

Chemical		Surrogate
1,3-dichlorobenzene	-	1,2-dichlorobenzene
methyl cyclohexane	-	cyclohexane
3&4-methylphenol	-	3-methylphenol
acenaphthylene	-	acenaphthene
benzo(g,h,i)perylene	-	pyrene
phenanthrene	-	pyrene
dimethylphthalate	-	diethylphthalate

Defintions:

-- = Not Available
N = Noncarcinogen
C = Carcinogen
Y = Yes
N = No
J - Estimated concentration.

Table 3

Occurrence, Distribution, and Identification of Chemicals of Potential Concern (COPCs) in EU03 Surface Soil (0-2 ft BGS)
South Dayton Dump Site
Moraine, Ohio

Medium: EU03 Surface Soil (0-2 ft BGS)
Exposure Medium: Surface Soil

CAS Number	Chemical	Minimum Concentration (1, 2)	Maximum Concentration (1, 2)	Units	Location of Maximum Concentration	Detection Frequency (2)	Range of Detection Limits (2)	Concentration Used for Screening (2)	Screening Toxicity Value (N/C) (3)		COPC Flag (Y/N)	Rationale for Selection or Deletion (4)
	Volatile Organic Compounds

8001-35-2	Toxaphene	ND	ND	µg/kg	--	0/6	26 - 540	N/A	490	C	N	ND

Notes:

(1) Minimum/maximum detected concentration.
(2) Based on data collected from sampling locations: SS-146, SS-147, SS-149, SS-150, SS-151, SS-153.
(3) Regional Screening Level (RSL) Summary Table (TR = 1E-06, HI = 0.1) , Residential Soil, November 2018.
(4) Rationale Codes

Selection Reason: Maximum detected above Screening Value (ASV)
Analyte Detected and no Screening Value available (AD)
Deletion Reason: Maximum detected below Screening Value (BSV)
Naturally Occurring (NAT)

(5) No screening value available, surrogate screening value implemented as follows:

Chemical		Surrogate
1,3-dichlorobenzene	-	1,2-dichlorobenzene
methyl cyclohexane	-	cyclohexane
3&4-methylphenol	-	3-methylphenol
acenaphthylene	-	acenaphthene
benzo(g,h,i)perylene	-	pyrene
phenanthrene	-	pyrene
dimethylphthalate	-	diethylphthalate

Defintions:

-- = Not Available
N = Noncarcinogen
C = Carcinogen
Y = Yes
N = No
J - Estimated concentration.

	Asbestos											
1332-21-4	Asbestos	ND	ND	%	--	0/6	1	N/A	--		N	ND

Notes:

(1) Minimum/maximum detected concentration.
(2) Based on data collected from sampling locations: BH152-18, BH153-18, BH154-18, BH155-18, BH156-18, BH157-18, SS-146, SS-147, SS-149, SS-150, SS-151, SS-153, TT-18.
(3) Regional Screening Level (RSL) Summary Table (TR = 1E-06, HI = 0.1) , Residential Soil, November 2018.
(4) Rationale Codes

Selection Reason: Maximum detected above Screening Value (ASV)
Analyte Detected and no Screening Value available (AD)
Deletion Reason: Maximum detected below Screening Value (BSV)
Naturally Occurring (NAT)

(5) No screening value available, surrogate screening value implemented as follows:

Chemical		Surrogate
1,3-dichlorobenzene	-	1,2-dichlorobenzene
methyl cyclohexane	-	cyclohexane
3&4-methylphenol	-	3-methylphenol
acenaphthylene	-	acenaphthene
benzo(g,h,i)perylene	-	pyrene
phenanthrene	-	pyrene
dimethylphthalate	-	diethylphthalate

Defintions:

-- = Not Available
N = Noncarcinogen
C = Carcinogen
Y = Yes
N = No
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.

8001-35-2	Toxaphene	ND	ND	µg/kg	--	0/6	27 - 290	N/A	490	C	N	ND

Notes:

(1) Minimum/maximum detected concentration.
(2) Based on data collected from sampling locations: SS-138, SS-139, SS-140, SS-142, SS-144, SS-145.
(3) Regional Screening Level (RSL) Summary Table (TR = 1E-06, HI = 0.1) , Residential Soil, November 2018.
(4) Rationale Codes

Selection Reason: Maximum detected above Screening Value (ASV)
Analyte Detected and no Screening Value available (AD)
Deletion Reason: Maximum detected below Screening Value (BSV)
Naturally Occurring (NAT)

(5) No screening value available, surrogate screening value implemented as follows:

Chemical		Surrogate
1,3-dichlorobenzene	-	1,2-dichlorobenzene
methyl cyclohexane	-	cyclohexane
3&4-methylphenol	-	3-methylphenol
acenaphthylene	-	acenaphthene
benzo(g,h,i)perylene	-	pyrene
phenanthrene	-	pyrene
dimethylphthalate	-	diethylphthalate

Defintions:

-- = Not Available
N = Noncarcinogen
C = Carcinogen
Y = Yes
N = No
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.

Notes:

(1) Minimum/maximum detected concentration.
(2) Based on data collected from sampling locations: BH146-18, BH147-18, BH148-18, BH149-18, BH150-18, BH151-18,GP08-19, SS-138, SS-139, SS-140, SS-142, SS-144, SS-145, TT-17.
(3) Regional Screening Level (RSL) Summary Table (TR = 1E-06, HI = 0.1) , Residential Soil, November 2018.
(4) Rationale Codes

Selection Reason: Maximum detected above Screening Value (ASV)
Analyte Detected and no Screening Value available (AD)
Deletion Reason: Maximum detected below Screening Value (BSV)
Naturally Occurring (NAT)

(5) No screening value available, surrogate screening value implemented as follows:

Chemical		Surrogate
1,3-dichlorobenzene	-	1,2-dichlorobenzene
methyl cyclohexane	-	cyclohexane
3&4-methylphenol	-	3-methylphenol
acenaphthylene	-	acenaphthene
benzo(g,h,i)perylene	-	pyrene
phenanthrene	-	pyrene
dimethylphthalate	-	diethylphthalate

Defintions:

-- = Not Available
N = Noncarcinogen
C = Carcinogen
Y = Yes
N = No
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.

8001-35-2	Toxaphene	ND	ND	µg/kg	--	0/12	26 - 540	N/A	490	C	N	ND

Notes:

(1) Minimum/maximum detected concentration.
(2) Based on data collected from sampling locations: SS-138, SS-139, SS-140, SS-142, SS-144, SS-145, SS-146, SS-147, SS-149, SS-150, SS-151, SS-153.
(3) Regional Screening Level (RSL) Summary Table (TR = 1E-06, HI = 0.1) , Residential Soil, November 2018.
(4) Rationale Codes

Selection Reason: Maximum detected above Screening Value (ASV)
Analyte Detected and no MOE Value available (AD)
Deletion Reason: Maximum detected below Screening Value (BSV)
Naturally Occurring (NAT)

(5) No screening value available, surrogate screening value implemented as follows:

Chemical		Surrogate
1,3-dichlorobenzene	-	1,2-dichlorobenzene
methyl cyclohexane	-	cyclohexane
3&4-methylphenol	-	3-methylphenol
acenaphthylene	-	acenaphthene
benzo(g,h,i)perylene	-	pyrene
phenanthrene	-	pyrene
dimethylphthalate	-	diethylphthalate

Defintions:

-- = Not Available
N = Noncarcinogen
C = Carcinogen
Y = Yes
N = No
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.

Notes:

(1) Minimum/maximum detected concentration.
(2) Based on data collected from sampling locations: BH68-13, BH105-18, BH106-18, BH152-18, BH153-18, BH154-18, BH155-18, BH156-18, BH157-18, GP30-18, GP31-18, SS-46, SS-47, SS-48, SS-49, SS-50, SS-51, SS-52, SS-53, SS-146, SS-147, SS-149, SS-150, SS-151, SS-153, SS-169-AS, SS-170-AS, TT-8, TT-9, TT-18.
(3) Regional Screening Level (RSL) Summary Table (TR = 1E-06, HI = 0.1) , Residential Soil, November 2018.
(4) Rationale Codes

Selection Reason: Maximum detected above Screening Value (ASV)
Analyte Detected and no Screening Value available (AD)
Deletion Reason: Maximum detected below Screening Value (BSV)
Naturally Occurring (NAT)

(5) No screening value available, surrogate screening value implemented as follows:

Chemical		Surrogate
1,3-dichlorobenzene	-	1,2-dichlorobenzene
methyl cyclohexane	-	cyclohexane
3&4-methylphenol	-	3-methylphenol
acenaphthylene	-	acenaphthene
benzo(g,h,i)perylene	-	pyrene
phenanthrene	-	pyrene
dimethylphthalate	-	diethylphthalate

Defintions:

-- = Not Available
N = Noncarcinogen
C = Carcinogen
Y = Yes
N = No
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.

Table 9

Occurrence, Distribution, and Identification of Chemicals of Potential Concern (COPCs) in EU05-EU08 Surface Soil (0-2 ft BGS)
South Dayton Dump Site
Moraine, Ohio

Medium: EU05-EU08 Surface Soil (0-2 ft BGS)
Exposure Medium: Surface Soil

1332-21-4	Asbestos	ND	ND	%	--	0/3	0.25	N/A	--		N	ND

Notes:

(1) Minimum/maximum detected concentration.
(2) Based on data collected from sampling locations: SS-98, SS-99, SS-100, SS-101, SS-102, SS-103, SS-104, SS-109, SS-112, SS-116, SS-120, SS-123, SS-158-AS, SS-159-AS, SS-160-AS.
(3) Regional Screening Level (RSL) Summary Table (TR = 1E-06, HI = 0.1) , Residential Soil, November 2018.
(4) Rationale Codes
Selection Reason: Maximum detected above Screening Value (ASV)
Analyte Detected and no Screening Value available (AD)
Deletion Reason: Maximum detected below Screening Value (BSV)
Naturally Occurring (NAT)
(5) No screening value available, surrogate screening value implemented as follows:

Chemical		Surrogate
1,3-dichlorobenzene	-	1,2-dichlorobenzene
methyl cyclohexane	-	cyclohexane
3&4-methylphenol	-	3-methylphenol
acenaphthylene	-	acenaphthene
benzo(g,h,i)perylene	-	pyrene
phenanthrene	-	pyrene
dimethylphthalate	-	diethylphthalate

Defintions:

-- = Not Available
N = Noncarcinogen
C = Carcinogen
Y = Yes
N = No
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.

Notes:

(1) Minimum/maximum detected concentration.
(2) Based on data collected from sampling locations: BH122-18 BH125-18, BH126-18, BH127-18, BH129-18, BH130-18, BH132-18, BH133-18, SS-98, SS-99, SS-100, SS-101, SS-102, SS-103, SS-104, SS-109, SS-112, SS-116, SS-120, SS-123, SS-158-AS, SS-159-AS, SS-160-AS.
(3) Regional Screening Level (RSL) Summary Table (TR = 1E-06, HI = 0.1) , Residential Soil, November 2018.
(4) Rationale Codes

Selection Reason: Maximum detected above Screening Value (ASV)
Analyte Detected and no Screening Value available (AD)
Deletion Reason: Maximum detected below Screening Value (BSV)
Naturally Occurring (NAT)

(5) No screening value available, surrogate screening value implemented as follows:

Chemical		Surrogate
1,3-dichlorobenzene	-	1,2-dichlorobenzene
methyl cyclohexane	-	cyclohexane
3&4-methylphenol	-	3-methylphenol
acenaphthylene	-	acenaphthene
benzo(g,h,i)perylene	-	pyrene
phenanthrene	-	pyrene
dimethylphthalate	-	diethylphthalate

Defintions:

-- = Not Available
N = Noncarcinogen
C = Carcinogen
Y = Yes
N = No
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.

Notes:

(1) Minimum/maximum detected concentration.
(2) Based on data collected from sampling locations: SS-86, SS-87, SS-88, SS-89, SS-90, SS-91, SS-92, SS-93, SS-161-AS, SS-162-AS.
(3) Regional Screening Level (RSL) Summary Table (TR = 1E-06, HI = 0.1) , Residential Soil, November 2018.
(4) Rationale Codes

Selection Reason: Maximum detected above Screening Value (ASV)
Analyte Detected and no Screening Value available (AD)
Deletion Reason: Maximum detected below Screening Value (BSV)
Naturally Occurring (NAT)

(5) No screening value available, surrogate screening value implemented as follows:

Chemical		Surrogate
1,3-dichlorobenzene	-	1,2-dichlorobenzene
methyl cyclohexane	-	cyclohexane
3&4-methylphenol	-	3-methylphenol
acenaphthylene	-	acenaphthene
benzo(g,h,i)perylene	-	pyrene
phenanthrene	-	pyrene
dimethylphthalate	-	diethylphthalate

Defintions:

-- = Not Available
N = Noncarcinogen
C = Carcinogen
Y = Yes
N = No
J - Estimated concentration.

Table 12

Occurrence, Distribution, and Identification of Chemicals of Potential Concern (COPCs) in EU09 Surface and Subsurface Soil (0-15 ft BGS)
South Dayton Dump Site
Moraine, Ohio

Medium: EU09 Surface and Subsurface Soil (0-15 ft BGS)
Exposure Medium: Soil

CAS Number	Chemical	Minimum Concentration (1, 2)	Maximum Concentration (1, 2)	Units	Location of Maximum Concentration	Detection Frequency (2)	Range of Detection Limits (2)	Concentration Used for Screening (2)	Screening Toxicity Value (N/C) (3)	COPC Flag (Y/N)	Rationale for Selection or Deletion (4)
	Asbestos										
1332-21-4	Asbestos	ND	ND	%	--	0/4	0.25 - 1	N/A	--	N	ND

Notes:

(1) Minimum/maximum detected concentration.
(2) Based on data collected from sampling locations: BH120-18, BH121-18, SS-86, SS-87, SS-88, SS-89, SS-90, SS-91, SS-92, SS-93, SS-161-AS, SS-162-AS, TP-17, TT-13, VAS-21B.
(3) Regional Screening Level (RSL) Summary Table (TR = 1E-06, HI = 0.1) , Residential Soil, November 2018.
(4) Rationale Codes

Selection Reason: Maximum detected above Screening Value (ASV)
Analyte Detected and no Screening Value available (AD)
Deletion Reason: Maximum detected below Screening Value (BSV)
Naturally Occurring (NAT)

(5) No screening value available, surrogate screening value implemented as follows:

Chemical		Surrogate
1,3-dichlorobenzene	-	1,2-dichlorobenzene
methyl cyclohexane	-	cyclohexane
3&4-methylphenol	-	3-methylphenol
acenaphthylene	-	acenaphthene
benzo(g,h,i)perylene	-	pyrene
phenanthrene	-	pyrene
dimethylphthalate	-	diethylphthalate

Defintions:

-- = Not Available
N = Noncarcinogen
C = Carcinogen
Y = Yes
N = No
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.

12001-29-5	Chrysotile asbestos	ND	ND	%	--	0/1	0.25	N/A	--		N	ND

Notes:

(1) Minimum/maximum detected concentration.
(2) Based on data collected from sampling locations: SS-32, SS-78, SS-79, SS-80, SS-81, SS-82, SS-83, SS-84, SS-85, SS-163-AS, SS-164-AS.
(3) Regional Screening Level (RSL) Summary Table (TR = 1E-06, HI = 0.1) , Residential Soil, November 2018.
(4) Rationale Codes

Selection Reason: Maximum detected above Screening Value (ASV)
Analyte Detected and no Screening Value available (AD)
Deletion Reason: Maximum detected below Screening Value (BSV)
Naturally Occurring (NAT)

(5) No screening value available, surrogate screening value implemented as follows:

Chemical		Surrogate
1,3-dichlorobenzene	-	1,2-dichlorobenzene
methyl cyclohexane	-	cyclohexane
3&4-methylphenol	-	3-methylphenol
acenaphthylene	-	acenaphthene
benzo(g,h,i)perylene	-	pyrene
phenanthrene	-	pyrene
dimethylphthalate	-	diethylphthalate

Defintions:

-- = Not Available
N = Noncarcinogen
C = Carcinogen
Y = Yes
N = No
J - Estimated concentration.

Table 14

Occurrence, Distribution, and Identification of Chemicals of Potential Concern (COPCs) in EU10 Surface and Subsurface Soil (0-15 ft BGS)
South Dayton Dump Site
Moraine, Ohio

Medium: EU10 Surface and Subsurface Soil (0-15 ft BGS)
Exposure Medium: Subsurface Soil

CAS Number	Chemical	Minimum Concentration (1, 2)	Maximum Concentration (1, 2)	Units	Location of Maximum Concentration	Detection Frequency (2)	Range of Detection Limits (2)	Concentration Used for Screening (2)	Screening Toxicity Value (N/C) (3)	COPC Flag (Y/N)	Rationale for Selection or Deletion (4)
	Asbestos										
1332-21-4	Asbestos	ND	ND	%	--	0/5	0.25 - 1	N/A	--	N	ND
12001-29-5	Chrysotile asbestos	ND	ND	%	--	0/1	0.25	N/A	--	N	ND

Notes:

(1) Minimum/maximum detected concentration.
(2) Based on data collected from sampling locations: SS-32, SS-78, SS-79, SS-80, SS-81, SS-82, SS-83, SS-84, SS-85, SS-163-AS, SS-164-AS, BH117-18, BH-118-18, BH119-18, BH97-17.
(3) Regional Screening Level (RSL) Summary Table (TR = 1E-06, HI = 0.1) , Residential Soil, November 2018.
(4) Rationale Codes

Selection Reason: Maximum detected above Screening Value (ASV)
Analyte Detected and no Screening Value available (AD)
Deletion Reason: Maximum detected below Screening Value (BSV)
Naturally Occurring (NAT)

(5) No screening value available, surrogate screening value implemented as follows:

Chemical		Surrogate
1,3-dichlorobenzene	-	1,2-dichlorobenzene
methyl cyclohexane	-	cyclohexane
3&4-methylphenol	-	3-methylphenol
acenaphthylene	-	acenaphthene
benzo(g,h,i)perylene	-	pyrene
phenanthrene	-	pyrene
dimethylphthalate	-	diethylphthalate

Defintions:

-- = Not Available
N = Noncarcinogen
C = Carcinogen
Y = Yes
N = No
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.

	Asbestos											
1332-21-4	Asbestos	ND	ND	%	--	0/2	0.25	N/A	--		N	ND

Notes:

(1) Minimum/maximum detected concentration.
(2) Based on data collected from sampling locations: SS-25, SS-70, SS-71, SS-72, SS-73, SS-74, SS-75, SS-76, SS-77, SS-165-AS, SS-166-AS.
(3) Regional Screening Level (RSL) Summary Table (TR = 1E-06, HI = 0.1) , Residential Soil, November 2018.
(4) Rationale Codes

Selection Reason: Maximum detected above Screening Value (ASV)
Analyte Detected and no Screening Value available (AD)
Deletion Reason: Maximum detected below Screening Value (BSV)
Naturally Occurring (NAT)

(5) No screening value available, surrogate screening value implemented as follows:

Chemical		Surrogate
1,3-dichlorobenzene	-	1,2-dichlorobenzene
methyl cyclohexane	-	cyclohexane
3&4-methylphenol	-	3-methylphenol
acenaphthylene	-	acenaphthene
benzo(g,h,i)perylene	-	pyrene
phenanthrene	-	pyrene
dimethylphthalate	-	diethylphthalate

Defintions:

-- = Not Available
N = Noncarcinogen
C = Carcinogen
Y = Yes
N = No
J - Estimated concentration.

Table 16

Occurrence, Distribution, and Identification of Chemicals of Potential Concern (COPCs) in EU11 Surface and Subsurface Soil (0-15 ft BGS)
South Dayton Dump Site
Moraine, Ohio

Medium: EU11 Surface and Subsurface Soil (0-15 ft BGS)
Exposure Medium: Soil

CAS Number	Chemical	Minimum Concentration (1, 2)	Minimum Qualifier	Maximum Concentration (1, 2)	Maximum Qualifier	Units	Location of Maximum Concentration	Detection Frequency (2)	Range of Detection Limits (2)	Concentration Used for Screening (2)	Screening Toxicity Value (N/C) (3)	COPC Flag (Y/N)	Rationale for Selection or Deletion (4)
	Asbestos												
1332-21-4	Asbestos	ND		ND		%	--	0/4	0.25 - 1	N/A	--	N	ND
12001-29-5	**Chrysotile asbestos**	**2**		**2**		**%**	**BH116-18: 11-13 ft BGS (1/11/2018)**	**1/1**	**--**	**2**	**--**	**Y**	**AD**

Notes:

(1) Minimum/maximum detected concentration.
(2) Based on data collected from sampling locations: SS-25, SS-70, SS-71, SS-72, SS-73, SS-74, SS-75, SS-76, SS-77, SS-165-AS, SS-166-AS, BH114-18, BH115-18, BH116-18, BH175-17, TP-13, TT-11, TT-12.
(3) Regional Screening Level (RSL) Summary Table (TR = 1E-06, HI = 0.1) , Residential Soil, November 2018.
(4) Rationale Codes

Selection Reason: Maximum detected above Screening Value (ASV)
Analyte Detected and no Screening Value available (AD)
Deletion Reason: Maximum detected below Screening Value (BSV)
Naturally Occurring (NAT)

(5) No screening value available, surrogate screening value implemented as follows:

Chemical		Surrogate
1,3-dichlorobenzene	-	1,2-dichlorobenzene
methyl cyclohexane	-	cyclohexane
3&4-methylphenol	-	3-methylphenol
acenaphthylene	-	acenaphthene
benzo(g,h,i)perylene	-	pyrene
phenanthrene	-	pyrene
dimethylphthalate	-	diethylphthalate

Defintions:

-- = Not Available
N = Noncarcinogen
C = Carcinogen
Y = Yes
N = No
J - Estimated concentration.

Notes:

(1) Minimum/maximum detected concentration.
(2) Based on data collected from sampling locations: SS-62, SS-63, SS-64, SS-65, SS-66, SS-67, SS-68, SS-69, SS-89, SS-167-AS.
(3) Regional Screening Level (RSL) Summary Table (TR = 1E-06, HI = 0.1) , Residential Soil, November 2018.
(4) Rationale Codes
Selection Reason: Maximum detected above Screening Value (ASV)
Analyte Detected and no Screening Value available (AD)
Deletion Reason: Maximum detected below Screening Value (BSV)
Naturally Occurring (NAT)
(5) No screening value available, surrogate screening value implemented as follows:

Chemical		Surrogate
1,3-dichlorobenzene	-	1,2-dichlorobenzene
methyl cyclohexane	-	cyclohexane
3&4-methylphenol	-	3-methylphenol
acenaphthylene	-	acenaphthene
benzo(g,h,i)perylene	-	pyrene
phenanthrene	-	pyrene
dimethylphthalate	-	diethylphthalate

Defintions:

-- = Not Available
N = Noncarcinogen
C = Carcinogen
Y = Yes
N = No
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.

Table 18

Occurrence, Distribution, and Identification of Chemicals of Potential Concern (COPCs) in EU12 Surface and Subsurface Soil (0-15 ft BGS)
South Dayton Dump Site
Moraine, Ohio

Medium: EU12 Surface and Subsurface Soil (0-15 ft BGS)
Exposure Medium: Soil

CAS Number	Chemical	Minimum Concentration (1, 2)	Maximum Concentration (1, 2)	Units	Location of Maximum Concentration	Detection Frequency (2)	Range of Detection Limits (2)	Concentration Used for Screening (2)	Screening Toxicity Value (N/C) (3)	COPC Flag (Y/N)	Rationale for Selection or Deletion (4)
	Asbestos										
1332-21-4	Asbestos	ND	ND	%	--	0/2	0.25 - 1	N/A	--	N	ND
12001-29-5	Chrysotile asbestos	ND	ND	%	--	0/2	1	N/A	--	N	ND

Notes:

(1) Minimum/maximum detected concentration.
(2) Based on data collected from sampling locations: BH83-13, BH84-13, BH111-18, BH112-18, BH113-18, SS-62, SS-63, SS-64, SS-65, SS-66, SS-67, SS-68, SS-69, SS-89, SS-167-AS, TT-10.
(3) Regional Screening Level (RSL) Summary Table (TR = 1E-06, HI = 0.1) , Residential Soil, November 2018.
(4) Rationale Codes

Selection Reason: Maximum detected above Screening Value (ASV)
Analyte Detected and no Screening Value available (AD)
Deletion Reason: Maximum detected below Screening Value (BSV)
Naturally Occurring (NAT)

(5) No screening value available, surrogate screening value implemented as follows:

Chemical		Surrogate
1,3-dichlorobenzene	-	1,2-dichlorobenzene
methyl cyclohexane	-	cyclohexane
3&4-methylphenol	-	3-methylphenol
acenaphthylene	-	acenaphthene
benzo(g,h,i)perylene	-	pyrene
phenanthrene	-	pyrene
dimethylphthalate	-	diethylphthalate

Defintions:

-- = Not Available
N = Noncarcinogen
C = Carcinogen
Y = Yes
N = No
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.

Notes:

(1) Minimum/maximum detected concentration.
(2) Based on data collected from sampling locations: BH74-13, SS-54, SS-55, SS-56, SS-57, SS-58, SS-59, SS-60, SS-61, SS-94, SS-168-AS.
(3) Regional Screening Level (RSL) Summary Table (TR = 1E-06, HI = 0.1) , Residential Soil, November 2018.
(4) Rationale Codes
Selection Reason: Maximum detected above Screening Value (ASV)
Analyte Detected and no Screening Value available (AD)
Deletion Reason: Maximum detected below Screening Value (BSV)
Naturally Occurring (NAT)
(5) No screening value available, surrogate screening value implemented as follows:

Chemical		Surrogate
1,3-dichlorobenzene	-	1,2-dichlorobenzene
methyl cyclohexane	-	cyclohexane
3&4-methylphenol	-	3-methylphenol
acenaphthylene	-	acenaphthene
benzo(g,h,i)perylene	-	pyrene
phenanthrene	-	pyrene
dimethylphthalate	-	diethylphthalate

Defintions:

-- = Not Available
N = Noncarcinogen
C = Carcinogen
Y = Yes
N = No
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.

Table 20

Occurrence, Distribution, and Identification of Chemicals of Potential Concern (COPCs) in EU13 Surface and Subsurface Soil (0-15 ft BGS)
South Dayton Dump Site
Moraine, Ohio

Medium: EU13 Surface and Subsurface Soil (0-15 ft BGS)
Exposure Medium: Soil

CAS Number	Chemical	Minimum Concentration (1, 2)	Maximum Concentration (1, 2)	Units	Location of Maximum Concentration	Detection Frequency (2)	Range of Detection Limits (2)	Concentration Used for Screening (2)	Screening Toxicity Value (N/C) (3)	COPC Flag (Y/N)	Rationale for Selection or Deletion (4)
	Asbestos										
1332-21-4	Asbestos	ND	ND	%	--	0/6	1	N/A	--	N	ND
12001-29-5	Chrysotile asbestos	ND	ND	%	--	0/1	0.25	N/A	--	N	ND

Notes:

(1) Minimum/maximum detected concentration.
(2) Based on data collected from sampling locations: BH66-13, BH67-13, BH74-13, BH107-18, BH1108-18, BH109-18, BH110-18, BH159-17, SS-54, SS-55, SS-56, SS-57, SS-58, SS-59, SS-60, SS-61, SS-94, SS-168-AS, TT-40.
(3) Regional Screening Level (RSL) Summary Table (TR = 1E-06, HI = 0.1) , Residential Soil, November 2018.
(4) Rationale Codes

Selection Reason: Maximum detected above Screening Value (ASV)
Analyte Detected and no Screening Value available (AD)
Deletion Reason: Maximum detected below Screening Value (BSV)
Naturally Occurring (NAT)

(5) No screening value available, surrogate screening value implemented as follows:

Chemical		Surrogate
1,3-dichlorobenzene	-	1,2-dichlorobenzene
methyl cyclohexane	-	cyclohexane
3&4-methylphenol	-	3-methylphenol
acenaphthylene	-	acenaphthene
benzo(g,h,i)perylene	-	pyrene
phenanthrene	-	pyrene
dimethylphthalate	-	diethylphthalate

Defintions:

-- = Not Available
N = Noncarcinogen
C = Carcinogen
Y = Yes
N = No
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.

	Asbestos											
1332-21-4	Asbestos	ND	ND	%	--	0/2	0.25	N/A	--		N	ND

Notes:

(1) Minimum/maximum detected concentration.
(2) Based on data collected from sampling locations: BH68-13, SS-46, SS-47, SS-48, SS-49, SS-50, SS-51, SS-52, SS-53, SS-169-AS, SS-170-AS.
(3) Regional Screening Level (RSL) Summary Table (TR = 1E-06, HI = 0.1) , Residential Soil, November 2018.
(4) Rationale Codes

Selection Reason: Maximum detected above Screening Value (ASV)
Analyte Detected and no Screening Value available (AD)
Deletion Reason: Maximum detected below Screening Value (BSV)
Naturally Occurring (NAT)

(5) No screening value available, surrogate screening value implemented as follows:

Chemical		Surrogate
1,3-dichlorobenzene	-	1,2-dichlorobenzene
methyl cyclohexane	-	cyclohexane
3&4-methylphenol	-	3-methylphenol
acenaphthylene	-	acenaphthene
benzo(g,h,i)perylene	-	pyrene
phenanthrene	-	pyrene
dimethylphthalate	-	diethylphthalate

Defintions:

-- = Not Available
N = Noncarcinogen
C = Carcinogen
Y = Yes
N = No
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.

Table 22

Occurrence, Distribution, and Identification of Chemicals of Potential Concern (COPCs) in EU14 Surface and Subsurface Soil (0-15 ft BGS)
South Dayton Dump Site
Moraine, Ohio

Medium: EU14 Surface and Subsurface Soil (0-15 ft BGS)
Exposure Medium: Soil

CAS Number	Chemical	Minimum Concentration (1, 2)	Maximum Concentration (1, 2)	Units	Location of Maximum Concentration	Detection Frequency (2)	Range of Detection Limits (2)	Concentration Used for Screening (2)	Screening Toxicity Value (N/C) (3)	COPC Flag (Y/N)	Rationale for Selection or Deletion (4)
	Asbestos										
1332-21-4	Asbestos	ND	ND	%	--	0/5	0.25 - 1	N/A	--	N	ND

Notes:

(1) Minimum/maximum detected concentration.
(2) Based on data collected from sampling locations: BH68-13, SS-46, SS-47, SS-48, SS-49, SS-50, SS-51, SS-52, SS-53, SS-169-AS, SS-170-AS, BH105-18, BH106-18, GP30-18, GP31-18, TT-8, TT-9.
(3) Regional Screening Level (RSL) Summary Table (TR = 1E-06, HI = 0.1) , Residential Soil, November 2018.
(4) Rationale Codes

Selection Reason: Maximum detected above Screening Value (ASV)
Analyte Detected and no Screening Value available (AD)
Deletion Reason: Maximum detected below Screening Value (BSV)
Naturally Occurring (NAT)

(5) No screening value available, surrogate screening value implemented as follows:

Chemical		Surrogate
1,3-dichlorobenzene	-	1,2-dichlorobenzene
methyl cyclohexane	-	cyclohexane
3&4-methylphenol	-	3-methylphenol
acenaphthylene	-	acenaphthene
benzo(g,h,i)perylene	-	pyrene
phenanthrene	-	pyrene
dimethylphthalate	-	diethylphthalate

Defintions:

-- = Not Available
N = Noncarcinogen
C = Carcinogen
Y = Yes
N = No
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.

Notes:

(1) Minimum/maximum detected concentration.
(2) Based on data collected from sampling locations: BH51-13, BH53-13, SS-125, SS-130, SS-131, SS-132, SS-133, SS-134, SS-135, SS-136, SS-137, SS-141, SS-143, SS-171-AS, SS-172-AS, SS-173-AS.
(3) Regional Screening Level (RSL) Summary Table (TR = 1E-06, HI = 0.1) , Residential Soil, November 2018.
(4) Rationale Codes
Selection Reason: Maximum detected above Screening Value (ASV)
Analyte Detected and no Screening Value available (AD)
Deletion Reason: Maximum detected below Screening Value (BSV)
Naturally Occurring (NAT)
(5) No screening value available, surrogate screening value implemented as follows:

Chemical		Surrogate
1,3-dichlorobenzene	-	1,2-dichlorobenzene
methyl cyclohexane	-	cyclohexane
3&4-methylphenol	-	3-methylphenol
acenaphthylene	-	acenaphthene
benzo(g,h,i)perylene	-	pyrene
phenanthrene	-	pyrene
dimethylphthalate	-	diethylphthalate

Defintions:

-- = Not Available
N = Noncarcinogen
C = Carcinogen
Y = Yes
N = No
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.

Table 24

Occurrence, Distribution, and Identification of Chemicals of Potential Concern (COPCs) in EU15 Surface and Subsurface Soil (0-15 ft BGS)
South Dayton Dump Site
Moraine, Ohio

Medium: EU15 Surface and Subsurface Soil (0-15 ft BGS)
Exposure Medium: Soil

CAS Number	Chemical	Minimum Concentration (1, 2)	Maximum Concentration (1, 2)	Units	Location of Maximum Concentration	Detection Frequency (2)	Range of Detection Limits (2)	Concentration Used for Screening (2)	Screening Toxicity Value (N/C) (3)	COPC Flag (Y/N)	Rationale for Selection or Deletion (4)
	Asbestos										
1332-21-4	Asbestos	ND	ND	%	--	0/5	0.25 - 1	N/A	--	N	ND
12001-29-5	Chrysotile asbestos	ND	ND	%	--	0/1	0.25	N/A	--	N	ND

Notes:

(1) Minimum/maximum detected concentration.
(2) Based on data collected from sampling locations: BH51-13, BH53-13, SS-125, SS-130, SS-131, SS-132, SS-133, SS-134, SS-135, SS-136, SS-137, SS-141, SS-143, SS-171-AS, SS-172-AS, SS-173-AS.
(3) Regional Screening Level (RSL) Summary Table (TR = 1E-06, HI = 0.1) , Residential Soil, November 2018.
(4) Rationale Codes

Selection Reason: Maximum detected above Screening Value (ASV)
Analyte Detected and no Screening Value available (AD)
Deletion Reason: Maximum detected below Screening Value (BSV)
Naturally Occurring (NAT)

(5) No screening value available, surrogate screening value implemented as follows:

Chemical		Surrogate
1,3-dichlorobenzene	-	1,2-dichlorobenzene
methyl cyclohexane	-	cyclohexane
3&4-methylphenol	-	3-methylphenol
acenaphthylene	-	acenaphthene
benzo(g,h,i)perylene	-	pyrene
phenanthrene	-	pyrene
dimethylphthalate	-	diethylphthalate

Defintions:

-- = Not Available
N = Noncarcinogen
C = Carcinogen
Y = Yes
N = No
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.

Table 25

Occurrence, Distribution, and Identification of Chemicals of Potential Concern (COPCs) in EU16 Surface Soil (0-2 ft BGS)
South Dayton Dump Site
Moraine, Ohio

Medium: EU16 Surface Soil (0-2 ft BGS)
Exposure Medium: Surface Soil

CAS Number	Chemical	Minimum Concentration (1, 2)	Maximum Concentration (1, 2)	Units	Location of Maximum Concentration	Detection Frequency (2)	Range of Detection Limits (2)	Concentration Used for Screening (2)	Screening Toxicity Value (N/C) (3)	COPC Flag (Y/N)	Rationale for Selection or Deletion (4)
	Asbestos										
1332-21-4	Asbestos	ND	ND	%	--	0/1	1	N/A	--	N	ND

Notes:

(1) Minimum/maximum detected concentration.
(2) Based on data collected from sampling locations: BH36-13, BH136-18.
(3) Regional Screening Level (RSL) Summary Table (TR = 1E-06, HI = 0.1) , Residential Soil, November 2018.
(4) Rationale Codes
Selection Reason: Maximum detected above Screening Value (ASV)
Analyte Detected and no Screening Value available (AD)
Deletion Reason: Maximum detected below Screening Value (BSV)
Naturally Occurring (NAT)
(5) No screening value available, surrogate screening value implemented as follows:

Chemical		Surrogate
1,3-dichlorobenzene	-	1,2-dichlorobenzene
methyl cyclohexane	-	cyclohexane
3&4-methylphenol	-	3-methylphenol
acenaphthylene	-	acenaphthene
benzo(g,h,i)perylene	-	pyrene
phenanthrene	-	pyrene
dimethylphthalate	-	diethylphthalate

Defintions:

-- = Not Available
N = Noncarcinogen
C = Carcinogen
Y = Yes
N = No
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.

Table 26

Occurrence, Distribution, and Identification of Chemicals of Potential Concern (COPCs) in EU16 Surface and Subsurface Soil (0-15 ft BGS)
South Dayton Dump Site
Moraine, Ohio

Medium: EU16 Surface and Subsurface Soil (0-15 ft BGS)
Exposure Medium: Soil

CAS Number	Chemical	Minimum Concentration (1, 2)	Maximum Concentration (1, 2)	Units	Location of Maximum Concentration	Detection Frequency (2)	Range of Detection Limits (2)	Concentration Used for Screening (2)	Screening Toxicity Value (N/C) (3)	COPC Flag (Y/N)	Rationale for Selection or Deletion (4)
	Asbestos										
1332-21-4	Asbestos	ND	ND	%	--	0/7	1	N/A	--	N	ND
12001-29-5	**Chrysotile asbestos**	**10**	**60**	**%**	**VAS-5: 7 ft BGS (12/15/2008)**	**2/3**	**1**	**60**	**--**	**Y**	**AD**

Notes:

(1) Minimum/maximum detected concentration.
(2) Based on data collected from sampling locations: BH13-13, BH34-13, BH36-13, BH38-13, BH42-13, BH44-13, BH136-18, BH137-18, BH138-18, BH139-18, BH140-18, BH141-18, BH142-18, GP01-18, GP32-18, TP-5, TP-6, TT-7, TT-21, TT-22, TT-24, VAS-5.
(3) Regional Screening Level (RSL) Summary Table (TR = 1E-06, HI = 0.1) , Residential Soil, November 2018.
(4) Rationale Codes

Selection Reason: Maximum detected above Screening Value (ASV)
Analyte Detected and no Screening Value available (AD)
Deletion Reason: Maximum detected below Screening Value (BSV)
Naturally Occurring (NAT)

(5) No screening value available, surrogate screening value implemented as follows:

Chemical		Surrogate
1,3-dichlorobenzene	-	1,2-dichlorobenzene
methyl cyclohexane	-	cyclohexane
3&4-methylphenol	-	3-methylphenol
acenaphthylene	-	acenaphthene
benzo(g,h,i)perylene	-	pyrene
phenanthrene	-	pyrene
dimethylphthalate	-	diethylphthalate

Defintions:

-- = Not Available
N = Noncarcinogen
C = Carcinogen
Y = Yes
N = No
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.

Notes:

(1) Minimum/maximum detected concentration.
(2) Based on data collected from sampling locations: SS-1, SS-2, SS-4, SS-6, SS-7, SS-8, SS-9, SS-10, SS-11, SS-96, SS-97, SS-127, SS-128, SS-129, SS-174, SS-175, SS-176, SS-177, SS-178, TP-9, and TT-20.
(3) Regional Screening Level (RSL) Summary Table (TR = 1E-06, HI = 0.1) , Residential Soil, November 2018.
(4) Rationale Codes

Selection Reason: Maximum detected above Screening Value (ASV)
Analyte Detected and no Screening Value available (AD)
Deletion Reason: Maximum detected below Screening Value (BSV)
Naturally Occurring (NAT)

(5) No screening value available, surrogate screening value implemented as follows:

Chemical		Surrogate
1,3-dichlorobenzene	-	1,2-dichlorobenzene
methyl cyclohexane	-	cyclohexane
3&4-methylphenol	-	3-methylphenol
acenaphthylene	-	acenaphthene
benzo(g,h,i)perylene	-	pyrene
phenanthrene	-	pyrene
dimethylphthalate	-	diethylphthalate

Defintions:

-- = Not Available
N = Noncarcinogen
C = Carcinogen
Y = Yes
N = No
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.

12001-29-5	**Chrysotile asbestos**	**0.25**	**0.5**	**%**	**SS-188-AS: 0-0.5 ft BGS (10/16/2018)**	**3/11**	**0.25**	**0.5**	**--**	**Y**	**AD**

Notes:

(1) Minimum/maximum detected concentration.

(2) Based on data collected from sampling locations: S1, S2, S3, S4, S5, S6, S7, S8, S9, S11, S01, S02, S03, S04, S06, S09, S10, S11, SS-20, SS-21, SS-22, SS-23, SS-24, SS-26, SS-27, SS-28, SS-29,SS-30, SS-31, SS-33, SS-34, SS-35, SS-36, SS-105, SS-106, SS-107, SS-108, SS-110, SS-111, SS-113, SS-179-AS, SS-180-AS, SS-181-AS, SS-182-AS, SS-183-AS, SS-184-AS, SS-185-AS, SS-186-AS, SS-187-AS, SS-188-AS, SS-189-AS, SS-190-AS, SS-191-AS, SS-192-AS, BH75-13, BH166-17, TP-2.

(3) Regional Screening Level (RSL) Summary Table (TR = 1E-06, HI = 0.1) , Residential Soil, November 2018.

(4) Rationale Codes

Selection Reason: Maximum detected above Screening Value (ASV)
Analyte Detected and no Screening Value available (AD)
Deletion Reason: Maximum detected below Screening Value (BSV)
Naturally Occurring (NAT)

(5) No screening value available, surrogate screening value implemented as follows:

Chemical		Surrogate
1,3-dichlorobenzene	-	1,2-dichlorobenzene
methyl cyclohexane	-	cyclohexane
3&4-methylphenol	-	3-methylphenol
acenaphthylene	-	acenaphthene
benzo(g,h,i)perylene	-	pyrene
phenanthrene	-	pyrene
dimethylphthalate	-	diethylphthalate

Defintions:

-- = Not Available
N = Noncarcinogen
C = Carcinogen
Y = Yes
N = No
J - Estimated concentration.
NJ - Tentatively identified compound, estimated concentration.
E - Exceed calibration range of GC/MS instrument (Organics).
D - Compounds at secondary dilution factor.
B - Estimated concentration (Inorganics).
X - Unknown description
P - The %RPD between the primary and confirmation column/ detector is >40%. The lower value has been reported.

Table 29

Exposure Point Concentration (EPC) Summary for Chemicals of Potential Concern in EU01 Surface Soil (0-2 ft BGS)
South Dayton Dump Site
Moraine, Ohio

Medium: EU01 Surface Soil (0-2 ft BGS)
Exposure Medium: Surface Soil

Chemicals of Potential Concern	Units	Mean (1)	Data Distribution (2)	Maximum Detected Concentration	Maximum Qualifier	EPC Units	Medium EPC Value	Medium EPC Statistic (3)	Medium EPC Rationale
Semi-Volatiles Organic Compounds

Benzo(b)fluoranthene	µg/kg	1.4E+03	(c)	3.9E+03		µg/kg	2.9E+03	95% Adjusted Gamma UCL	(4)
Carbazole	µg/kg	1.0E+02	(c)	3.3E+02		µg/kg	2.3E+02	95% KM Adjusted Gamma UCL	(4)
Dibenz(a,h)anthracene	µg/kg	1.8E+02	(c)	5.7E+02		µg/kg	5.7E+02	95% KM Bootstrap t UCL	(4)
Indeno(1,2,3-cd)pyrene	µg/kg	6.4E+02	(c)	1.9E+03		µg/kg	1.5E+03	95% Adjusted Gamma UCL	(4)
Metals									
Aluminum	mg/kg	5.6E+03	(d)	8.4E+03	J	mg/kg	6.7E+03	95% Student's-t UCL	(4)
Arsenic	mg/kg	8.6E+00	(c)	2.9E+01		mg/kg	1.4E+01	95% Adjusted Gamma UCL	(4)
Chromium VI (hexavalent)	mg/kg	6.3E-01	(d)	2.3E+00		mg/kg	1.1E+00	95% KM (t) UCL	(4)
Cobalt	mg/kg	5.2E+00	(d)	9.6E+00		mg/kg	6.3E+00	95% Student's-t UCL	(4)
Iron	mg/kg	1.2E+04	(d)	1.6E+04		mg/kg	1.4E+04	95% Student's-t UCL	(4)
Manganese	mg/kg	3.9E+02	(d)	6.2E+02	J	mg/kg	4.7E+02	95% Student's-t UCL	(4)
Thallium	mg/kg	2.3E-01	(a)	8.2E-01		mg/kg	5.0E-01	95% KM Chebyshev UCL	(4)
Polychlorinated Biphenyls									
Aroclor-1254 (PCB-1254)	µg/kg	4.3E+01	(a)	1.8E+02		µg/kg	1.4E+02	95% KM Chebyshev UCL	(4)

Notes:

J - Estimated concentration.
(1) The Kaplan-Meier estimation method for non-detects was used, as per USEPA (2013).
(2) Data Distribution (Note: data distribution calculated by ProUCL are based on detected values only:
(a) Data set is neither normally, gamma or lognormally distributed.
(b) Data set is lognormally distributed.
(c) Data set is gamma distributed.
(d) Data set is normally distributed.
(3) Statistics (Note: 95% UCL values are calculated using ProUCL software, Version 5.1.
95% Student's-t UCL = UCL of the mean based upon the student's-t statistic
95% KM (t) UCL = UCL based upon Kaplan-Meier Estimates for non-detects using Student's t-Distribution Critical Value
95% Adjusted Gamma UCL = gamma adjusted UCL when n<50
95% KM Adjusted Gamma UCL = gamma adjusted UCL based upon Kaplan-Meier Estimates when n<50
95% KM Chebyshev UCL = UCL based upon Kaplan-Meier Estimates for non-detects using the Chebyshev Inequality
95% KM Bootstrap t UCL = UCL based upon Kaplan-Meier Estimates for non-detects using Bootstrap method
(4) ProUCL recommended value is used as the EPC value. In the event of more than one recommended EPC value, the higher EPC value is used.

Table 30

Exposure Point Concentration (EPC) Summary for Chemicals of Potential Concern in EU02 Surface Soil (0-2 ft BGS)
South Dayton Dump Site
Moraine, Ohio

Medium: EU02 Surface Soil (0-2 ft BGS)
Exposure Medium: Surface Soil

Chemicals of Potential Concern	Units	Mean (1)	Data Distribution (2)	Maximum Detected Concentration	Maximum Qualifier	EPC Units	Medium EPC Value	Medium EPC Statistic (3)	Medium EPC Rationale
Metals									
Aluminum	mg/kg	1.4E+04	(d)	1.7E+04		mg/kg	1.6E+04	95% Student's-t UCL	(4)
Arsenic	mg/kg	1.1E+01	(d)	1.4E+01		mg/kg	1.3E+01	95% Student's-t UCL	(4)
Cobalt	mg/kg	8.0E+00	(d)	8.4E+00		mg/kg	8.4E+00	95% Student's-t UCL	(4)
Iron	mg/kg	2.3E+04	(d)	2.6E+04		mg/kg	2.5E+04	95% Student's-t UCL	(4)
Manganese	mg/kg	6.5E+02	(d)	7.3E+02		mg/kg	7.1E+02	95% Student's-t UCL	(4)
Thallium	mg/kg	2.3E-01	(d)	2.6E-01		mg/kg	2.5E-01	95% Student's-t UCL	(4)
Vanadium	mg/kg	3.6E+01	(d)	4.3E+01		mg/kg	4.0E+01	95% Modified-t UCL	(4)

Notes:

(1) The Kaplan-Meier estimation method for non-detects was used, as per USEPA (2013).
(2) Data Distribution (Note: data distribution calculated by ProUCL are based on detected values only:
(a) Data set is neither normally, gamma or lognormally distributed.
(b) Data set is lognormally distributed.
(c) Data set is gamma distributed.
(d) Data set is normally distributed.
(3) Statistics (Note: 95% UCL values are calculated using ProUCL software, Version 5.1.
95% Student's-t UCL = UCL of the mean based upon the student's-t statistic
95% Modified-t UCL = UCL of the mean based upon the modified student's-t statistic
(4) ProUCL recommended value is used as the EPC value. In the event of more than one recommended EPC value, the higher EPC value is used.

Table 31

Exposure Point Concentration (EPC) Summary for Chemicals of Potential Concern in EU03 Surface Soil (0-2 ft BGS)
South Dayton Dump Site
Moraine, Ohio

Medium: EU03 Surface Soil (0-2 ft BGS)
Exposure Medium: Surface Soil

Chemicals of Potential Concern	Units	Mean (1)	Data Distribution (2)	Maximum Detected Concentration	Maximum Qualifier	EPC Units	Medium EPC Value	Medium EPC Statistic (3)	Medium EPC Rationale
Metals (cont.'d)									
Thallium	mg/kg	1.5E-01	(d)	2.5E-01		mg/kg	2.2E-01	95% KM (t) UCL	(4)
Vanadium	mg/kg	4.3E+01	(d)	1.7E+02		mg/kg	1.5E+02	95% Chebyshev (Mean, Sd) UCL	(4)

Notes:

J - Estimated concentration.
(1) The Kaplan-Meier estimation method for non-detects was used, as per USEPA (2013).
(2) Data Distribution (Note: data distribution calculated by ProUCL are based on detected values only:
(a) Data set is neither normally, gamma or lognormally distributed.
(b) Data set is lognormally distributed.
(c) Data set is gamma distributed.
(d) Data set is normally distributed.
(3) Statistics (Note: 95% UCL values are calculated using ProUCL software, Version 5.1.
95% Student's-t UCL = UCL of the mean based upon the student's-t statistic
95% KM (t) UCL = UCL based upon Kaplan-Meier Estimates for non-detects using Student's t-Distribution Critical Value
95% KM Adjusted Gamma UCL = gamma adjusted UCL based upon Kaplan-Meier Estimates when n<50
95% Chebyshev (Mean, Sd) UCL = UCL of mean and standard deviation using the Chebyshev Inequality
99% Chebyshev (Mean, Sd) UCL = UCL of mean and standard deviation using the Chebyshev Inequality
99% KM Chebyshev UCL = UCL based upon Kaplan-Meier Estimates for non-detects using the Chebyshev Inequality
95% KM H-UCL = UCL based upon Kaplan-Meier Estimates for non-detects using Land's H-statistic
(4) ProUCL recommended value is used as the EPC value. In the event of more than one recommended EPC value, the higher EPC value is used.

Notes:

J - Estimated concentration.
(1) The Kaplan-Meier estimation method for non-detects was used, as per USEPA (2013).
(2) Data Distribution (Note: data distribution calculated by ProUCL are based on detected values only:
(a) Data set is neither normally, gamma or lognormally distributed.
(b) Data set is lognormally distributed.
(c) Data set is gamma distributed.
(d) Data set is normally distributed.
(3) Statistics (Note: 95% UCL values are calculated using ProUCL software, Version 5.1.
95% Student's-t UCL = UCL of the mean based upon the student's-t statistic
95% KM (t) UCL = UCL based upon Kaplan-Meier Estimates for non-detects using Student's t-Distribution Critical Value
95% Modified-t UCL = 95% UCL of the mean based upon the modified student's-t statistic
95% Chebyshev (Mean, Sd) UCL = UCL of mean and standard deviation using the Chebyshev Inequality
99% Chebyshev (Mean, Sd) UCL = UCL of mean and standard deviation using the Chebyshev Inequality
95% KM Chebyshev UCL = UCL based upon Kaplan-Meier Estimates for non-detects using the Chebyshev Inequality
99% KM Chebyshev UCL = UCL based upon Kaplan-Meier Estimates for non-detects using the Chebyshev Inequality
95% KM H-UCL = UCL based upon Kaplan-Meier Estimates for non-detects using Land's H-statistic
(4) ProUCL recommended value is used as the EPC value. In the event of more than one recommended EPC value, the higher EPC value is used.

Vanadium	mg/kg	2.2E+01	(c)	6.0E+01		mg/kg	3.1E+01	95% Adjusted Gamma UCL	(4)

Table 40

Exposure Point Concentration (EPC) Summary for Chemicals of Potential Concern in EU09 Surface and Subsurface Soil (0-15 ft BGS)
South Dayton Dump Site
Moraine, Ohio

Medium: EU09 Surface and Subsurface Soil (0-15 ft BGS)
Exposure Medium: Soil

Chemicals of Potential Concern	Units	Mean (1)	Data Distribution (2)	Maximum Detected Concentration	Maximum Qualifier	EPC Units	Medium EPC Value	Medium EPC Statistic (3)	Medium EPC Rationale
Polychlorinated Biphenyls									
Aroclor-1254 (PCB-1254)	µg/kg	3.8E+01	(d)	1.7E+02		µg/kg	7.0E+01	95% KM (t) UCL	(4)

Notes:

J - Estimated concentration.
(1) The Kaplan-Meier estimation method for non-detects was used, as per USEPA (2013).
(2) Data Distribution (Note: data distribution calculated by ProUCL are based on detected values only:
(a) Data set is neither normally, gamma or lognormally distributed.
(b) Data set is lognormally distributed.
(c) Data set is gamma distributed.
(d) Data set is normally distributed.
(3) Statistics (Note: 95% UCL values are calculated using ProUCL software, Version 5.1.
95% Student's-t UCL = UCL of the mean based upon the student's-t statistic
95% Adjusted Gamma UCL = gamma adjusted UCL when n<50
97.5% KM Chebyshev UCL = UCL based upon Kaplan-Meier Estimates for non-detects using the Chebyshev Inequality
99% KM Chebyshev UCL = UCL based upon Kaplan-Meier Estimates for non-detects using the Chebyshev Inequality
99% Chebyshev (Mean, Sd) UCL = UCL of mean and standard deviation using the Chebyshev Inequality
(4) ProUCL recommended value is used as the EPC value. In the event of more than one recommended EPC value, the higher EPC value is used.
(5) Recommended UCL exceeds maximum observation, therefore the EPC is the lower suggested UCL.
(6) Due to the limited dataset an EPC could not be calculated, therefore the maximum detected is the EPC for the surface soil exposure.

Table 41

Manganese	mg/kg	4.1E+02	(c)	2.6E+03		mg/kg	9.5E+02	95% Adjusted Gamma UCL	(4)
Thallium	mg/kg	2.5E-01	(d)	1.1E+00		mg/kg	3.9E-01	95% KM (t) UCL	(4)
Vanadium	mg/kg	2.1E+01	(d)	4.9E+01	J	mg/kg	2.7E+01	95% Student's-t UCL	(4)
Polychlorinated Biphenyls									
Aroclor-1254 (PCB-1254)	µg/kg	4.7E+01	(a)	2.1E+02		µg/kg	8.4E+01	95% KM (t) UCL	(5)

Notes:

J - Estimated concentration.
(1) The Kaplan-Meier estimation method for non-detects was used, as per USEPA (2013).
(2) Data Distribution (Note: data distribution calculated by ProUCL are based on detected values only:
(a) Data set is neither normally, gamma or lognormally distributed.
(b) Data set is lognormally distributed.
(c) Data set is gamma distributed.
(d) Data set is normally distributed.
(3) Statistics (Note: 95% UCL values are calculated using ProUCL software, Version 5.1.
95% Student's-t UCL = UCL of the mean based upon the student's-t statistic
95% KM (t) UCL = UCL based upon Kaplan-Meier Estimates for non-detects using Student's t-Distribution Critical Value
95% Adjusted Gamma UCL = gamma adjusted UCL when n<50
95% KM Bootstrap t UCL = UCL based upon Kaplan-Meier Estimates for non-detects using Bootstrap method
(4) ProUCL recommended value is used as the EPC value. In the event of more than one recommended EPC value, the higher EPC value is used.
(5) Due to the limited dataset an EPC could not be calculated, therefore the maximum detected is the EPC for the surface soil exposure.

Table 50

Exposure Point Concentration (EPC) Summary for Chemicals of Potential Concern in EU14 Surface and Subsurface Soil (0-15 ft BGS)
South Dayton Dump Site
Moraine, Ohio

Medium: EU14 Surface and Subsurface Soil (0-15 ft BGS)
Exposure Medium: Soil

Chemicals of Potential Concern	Units	Mean (1)	Data Distribution (2)	Maximum Detected Concentration	Maximum Qualifier	EPC Units	Medium EPC Value	Medium EPC Statistic (3)	Medium EPC Rationale
Polychlorinated Biphenyls									
Aroclor-1242 (PCB-1242)	µg/kg	--	--	3.7E+02		µg/kg	3.7E+02	Maximum Detected	(5)
Aroclor-1248 (PCB-1248)	µg/kg	--	--	4.3E+02		µg/kg	4.3E+02	Maximum Detected	(5)
Aroclor-1254 (PCB-1254)	µg/kg	4.3E+02	(c)	3.7E+03		µg/kg	2.6E+03	95% KM Bootstrap t UCL	(4)
Aroclor-1260 (PCB-1260)	µg/kg	1.2E+03	(d)	1.4E+04		µg/kg	3.4E+03	95% KM (t) UCL	(4)
Pesticides									
Dieldrin	µg/kg	2.3E+01	(a)	2.7E+02	J	µg/kg	1.5E+02	95% KM Chebyshev UCL	(4)

Notes:

J - Estimated concentration.
(1) The Kaplan-Meier estimation method for non-detects was used, as per USEPA (2013).
(2) Data Distribution (Note: data distribution calculated by ProUCL are based on detected values only:
(a) Data set is neither normally, gamma or lognormally distributed.
(b) Data set is lognormally distributed.
(c) Data set is gamma distributed.
(d) Data set is normally distributed.
(3) Statistics (Note: 95% UCL values are calculated using ProUCL software, Version 5.1.
95% Student's-t UCL = UCL of the mean based upon the student's-t statistic
95% KM (t) UCL = UCL based upon Kaplan-Meier Estimates for non-detects using Student's t-Distribution Critical Value
95% Adjusted Gamma UCL = gamma adjusted UCL when n<50
95% KM Adjusted Gamma UCL = gamma adjusted UCL based upon Kaplan-Meier Estimates when n<50
95% KM Chebyshev UCL = UCL based upon Kaplan-Meier Estimates for non-detects using the Chebyshev Inequality
95% KM Bootstrap t UCL = UCL based upon Kaplan-Meier Estimates for non-detects using Bootstrap method
(4) ProUCL recommended value is used as the EPC value. In the event of more than one recommended EPC value, the higher EPC value is used.
(5) Due to the limited dataset an EPC could not be calculated, therefore the maximum detected is the EPC for the soil exposure.

Total TEQ (DL @ 0)	pg/g	1.8E+02	(c)	8.3E+02		pg/g	7.4E+02	95% Adjusted Gamma UCL	(4)
Total TEQ (DL @ Half)	pg/g	1.8E+02	(c)	8.3E+02		pg/g	7.4E+02	95% Adjusted Gamma UCL	(4)
Asbestos									
Chrysotile asbestos	%	--	--	6.0E+01		%	6.0E+01	Maximum Detected	(5)

Notes:

J - Estimated concentration.
(1) The Kaplan-Meier estimation method for non-detects was used, as per USEPA (2013).
(2) Data Distribution (Note: data distribution calculated by ProUCL are based on detected values only:
(a) Data set is neither normally, gamma or lognormally distributed.
(b) Data set is lognormally distributed.
(c) Data set is gamma distributed.
(d) Data set is normally distributed.
(3) Statistics (Note: 95% UCL values are calculated using ProUCL software, Version 5.1.
95% Student's-t UCL = UCL of the mean based upon the student's-t statistic
95% KM (t) UCL = UCL based upon Kaplan-Meier Estimates for non-detects using Student's t-Distribution Critical Value
95% Adjusted Gamma UCL = gamma adjusted UCL when n<50
95% KM Adjusted Gamma UCL = gamma adjusted UCL based upon Kaplan-Meier Estimates when n<50
95% Chebyshev (Mean, Sd) UCL = UCL of mean and standard deviation using the Chebyshev Inequality
99% Chebyshev (Mean, Sd) UCL = UCL of mean and standard deviation using the Chebyshev Inequality
97.5% KM Chebyshev UCL = UCL based upon Kaplan-Meier Estimates for non-detects using the Chebyshev Inequality
99% KM Chebyshev UCL = UCL based upon Kaplan-Meier Estimates for non-detects using the Chebyshev Inequality
(4) ProUCL recommended value is used as the EPC value. In the event of more than one recommended EPC value, the higher EPC value is used.
(5) Due to the limited dataset an EPC could not be calculated, therefore the maximum detected is the EPC for the soil exposure.

Asbestos									
Chrysotile asbestos	%	2.7E-01	(d)	5.0E-01		%	3.2E-01	95% KM (t) UCL	(4)

Notes:

J - Estimated concentration.
X - Unknown description.
(1) The Kaplan-Meier estimation method for non-detects was used, as per USEPA (2013).
(2) Data Distribution (Note: data distribution calculated by ProUCL are based on detected values only:
(a) Data set is neither normally, gamma or lognormally distributed.
(b) Data set is lognormally distributed.
(c) Data set is gamma distributed.
(d) Data set is normally distributed.
(3) Statistics (Note: 95% UCL values are calculated using ProUCL software, Version 5.1):
95% Student's-t UCL = UCL of the mean based upon the student's-t statistic
95% KM (t) UCL = UCL based upon Kaplan-Meier Estimates for non-detects using Student's t-Distribution Critical Value
95% Adjusted Gamma UCL = gamma adjusted UCL when n<50
95% KM Adjusted Gamma UCL = gamma adjusted UCL based upon Kaplan-Meier Estimates when n<50
95% KM Chebyshev UCL = UCL based upon Kaplan-Meier Estimates for non-detects using the Chebyshev Inequality
95% Chebyshev (Mean, Sd) UCL = UCL of mean and standard deviation using the Chebyshev Inequality
97.5% Chebyshev (Mean, Sd) UCL = UCL of mean and standard deviation using the Chebyshev Inequality
99% Chebyshev (Mean, Sd) UCL = UCL of mean and standard deviation using the Chebyshev Inequality
95% KM H-UCL = UCL based upon Kaplan-Meier Estimates for non-detects using Land's H-statistic
(4) ProUCL recommended value is used as the EPC value. In the event of more than one recommended EPC value, the higher EPC value is used.
(5) Due to the limited dataset an EPC could not be calculated, therefore the maximum detected is the EPC for the surface soil exposure.

Dear Ms. Patterson and Ms. McPeek:

Re: Phase 1 Soil Gas Investigation Activities and Results - updated
South Dayton Dump and Landfill Site, Moraine, Ohio (Site)

This letter provides a summary and discussion of results from the Phase 1 soil gas investigation activities conducted at the South Dayton Dump and Landfill Site (Site) and vicinity, from January 2018 to January 2019. This letter is submitted as an interim deliverable for the purpose of providing the results of field monitoring and sampling of existing and new soil gas probes, pending completion of the remaining RI field sampling activities. GHD has prepared this letter on behalf of the Respondents to the Administrative Settlement Agreement and Order on Consent (ASAOC) for Remedial Investigation/Feasibility Study (RI/FS) of the Site, Docket No. V-W-16-C-011 (Respondents).

Soil Gas Probe Installation

GHD proposed installation of 18 soil gas probes in the Remedial Investigation/Feasibility Study (RI/FS) Work Plan for Operable Units 1 and 2 (RI/FS Work Plan), including 12 new soil gas probes and 6 soil gas probes reinstalled at existing locations to depths greater than 5 feet below ground surface (BGS).

A total of 11 new soil gas probe installations were completed and three soil gas probes were re-installed (to depths greater than 5 feet BGS) from January 2018 to January 2019 as described in the RI/FS Work Plan. In addition, one gas probe was re-installed since the original gas probe could not be found and one

other was re-installed since the original probe could not be monitored. The completed gas probe locations (shown on Figure 1) include, in sequence, the following:

- Soil gas probe GP32-18 was installed on January 10, 2018
- Soil gas probe GP30-18 was installed on January 17, 2018
- Soil gas probe GP33-18 was installed on January 23, 2018
- Existing soil gas probes GP19-09 and GP20-09 were abandoned and reinstalled at deeper depths as GP19-18 and GP20-18 on January 24, 2018
- Soil gas probe GP31-18 was installed on January 25, 2018
- Soil gas probe GP25-18 was installed on January 29, 2018
- Soil gas probe GP01-18 was installed on January 29, 2018, at an offset location to replace GP01-09
- Soil gas probes GP26-18 and GP28-18 were installed on January 31, 2018
- Soil gas probes GP27-18 and GP29-18 were installed on February 1, 2018
- Soil gas probe GP34-18 was installed on July 31, 2018
- Soil gas probe GP07-09 could not be located and was re-installed as GP07-18 on August 1, 2018 (in addition to the probes identified in the RI/FS Work Plan)
- Soil gas probe GP35-19 was installed on January 15, 2019
- Soil gas probe GP08-09 could not be monitored and was re-installed as GP08-19 on January 15, 2019

The soil gas probes proposed in the RI/FS Work Plan that remain to be completed include one location at an East River Road property (on non-responsive pending Site access (or identification of an alternate location). Three soil gas probes that were proposed to be reinstalled at depths greater than 5 feet BGS were not completed. Two of these locations (GP17-09 and GP18-09) at Valley Asphalt property are inaccessible due to ongoing operations at Valley Asphalt. Soil gas probes GP17-09 and GP18-09 were originally installed to assess landfill gas and soil vapor quality and the risk to any building occupants in the two nearby structures that have been demolished by Valley Asphalt, and they are therefore no longer required for that purpose. GHD will evaluate the need for additional soil gas probes on Valley Asphalt property during the soil gas data assessment that will be completed in accordance with the RI/FS Work. GHD attempted to reinstall existing soil gas probe GP03-09 (located on the central portion of the Site in Parcel 5177) at a depth greater than 5 feet BGS; however, this was not completed because the water table was present at a depth of 6.0 feet BGS. The soil gas probe locations completed to date and the one remaining proposed location per the RI/FS Work Plan are shown on Figure 1. A summary of the GHD soil gas probe completion details are provided in Table 1, which also lists EPA multi-level gas probes[1].

[1] GHD has requested soil gas completion details for the EPA multi-level soil gas probes from USEPA. GHD will determine the feasibility of measuring the depths of the EPA soil gas probes for confirmation purposes.

For each new and replacement soil gas probe, drilling and installation was completed using direct push technology, with GHD oversight. The soil core retrieved from each location was logged to determine stratigraphy to the required depth, approximately 20 feet BGS, and was used to establish the soil gas probe screen interval. The stratigraphic and instrumentation logs for each new and/or replacement soil gas probe location listed above are included in Attachment 1.

In accordance with the RI/FS Work Plan, GHD collected 16 soil samples from the gas probe borings and submitted to TestAmerica Laboratories in North Canton, Ohio Test for laboratory analysis of volatile organic compounds (VOCs), fraction of organic carbon (FoC) and grain size sieve analysis. Soil samples were collected from gas probe borings at the screened depth at all new and/or replacement soil gas probe locations, with the one exception. At GP28-18, a soil sample was collected from a depth of 15 to 16 feet BGS. Due to detection of perched water recorded to be present at 13 feet BGSs for VOCs and physical testing parameters are summarized in Table 2.

VOCs were detected in soil samples collected from 15 of the 16 soil gas probe locations; VOCs were not detected in the soil sample from GP34-18. Collectively, the detected VOCs in soil samples include benzene, toluene, ethylbenzene, xylenes (BTEX), vinyl chloride (VC), cis-1,2-dichloroethene (cis-1,2-DCE), trichloroethene (TCE), tetrachloroethene (PCE), 1,2,4-tricholorobenzene, 1,2-dichlorobenzene, 1,4-dichlorobenzene, 2-butanone, acetone, carbon disulfide, chlorobenzene, isopropyl benzene, methyl acetate, and methyl cyclohexane. The total detected VOC concentrations at 10 of 16 borings were less than 100 µg/kg. The soil borings with the greatest total detected VOC concentrations include GP01-18 (at Valley Asphalt property) and GP28-18 (in the central portion of the Site). At these two locations the total detected VOC concentrations were 100,000 and 3,350,000 µg/kg, respectively. The next three greatest total VOC concentrations were detected at GP27-18 (6,616 µg/kg), GP07-18 (3,827 µg/kg), and GP25-18 (2,000 µg/kg), and the total VOC concentrations at each of the remaining eleven locations were all less than 100 µg/kg.

Field Parameter Monitoring - 2018

Field parameter monitoring for organic vapors, carbon dioxide, oxygen, combustible gas (i.e., methane and other explosive gases), and hydrogen sulfide were completed in three monitoring rounds in 2018, as described in the RI/FS Work Plan. Field monitoring includes all accessible soil gas probes installed by GHD, which includes probes newly installed in 2018 and 2019 as well as probes installed prior to 2018, as shown on Figure 1. Three soil gas probes that were not accessible or not found were GP07-09; GP17-09; and GP18-09. The monitoring program identified in the RI/FS Work Plan also includes USEPA soil gas probes at six locations, identified as GP-1 and GP-3 through GP-7[2]. These locations include multi-level probes, totaling 17 discrete gas probe screen intervals.

[2] One USEPA soil gas probe location (GP-2) located adjacent to the DP&L transportation building and former UST area was not included in the field monitoring program based on USEPA approval of GHD's Technical Report: GP-2 Methane Monitoring Summary & Assessment, South Dayton Dump and Landfill Site and Revision 1, Addendum 2 of the VI Mitigation Work Plan, provided on December 12, 2016.

The field parameter monitoring rounds are described below:

Round 1 – March 2018

- Field parameter monitoring was completed at 28 GHD soil gas probes and 12 USEPA soil gas probes on March 21, 2018.
- Four soil gas probes (GP06-09, GP07-09, GP08-09, and USEPA GP-7) were inaccessible due to the presence of snow, vegetation, or stockpiled debris, and one soil gas probe (GP21-09) had insufficient gas flow. Two soil gas probes (GP17-09 and GP18-09) located on Valley Asphalt property were excluded since they are inaccessible, and were constructed to a depth less than 5 feet BGS.
- The results of the March 2018 soil gas field parameter monitoring round are provided in Attachment 2 - Table 1.

Round 2 – August/September 2018

- Field parameter monitoring was completed at 32 GHD soil gas probes and 9 USEPA soil gas probes on August 24, 2018.
- Pressure readings were completed at 33 GHD soil gas probe locations and 15 USEPA soil gas probes from September 4 to 6, 2018.
- Supplementary field monitoring was completed at eight GHD soil gas probe locations and five USEPA soil gas probes from September 4 to 6, 2018. This included measuring combustible gas concentrations using a LandTec GEM2000 with a filtering device to assist with differentiating methane from other explosive gases[3], in response to the unfiltered total combustible gas monitoring readings from August 24, 2018 (see Table 2b in Attachment 2).
- One soil gas probe (GP08-09) had insufficient gas flow and was not monitored. Two GHD soil gas probes (GP17-09 and GP18-09) located on Valley Asphalt property were not included for the same reasons noted above for the first monitoring round.
- The results of the August/September 2018 soil gas field parameter monitoring round are provided in Attachment 2 - Tables 2a and 2b.

Round 3 – November 2018

- Field parameter monitoring was completed at 30 GHD soil gas probes and 12 USEPA soil gas probes on November 12 to 14, 2018.
- Two soil gas probes (GP09-09 and USEPA GP-6) were inaccessible due to the presence of vegetation or stockpiled debris. Four soil gas probes (GP03-09, GP08-09, USEPA GP-1 (south), and USEPA GP-3 (southeast)) had insufficient gas flow and were not monitored. Two GHD soil gas

---

[3] GHD has completed filtered and unfiltered combustible gas readings since March 2012 at USEPA's request in order to monitor methane and total combustible gases, respectively. The filtering device removes interferences from other potentially present hydrocarbons while allowing methane to pass through to the combustible gas meter.

probes (GP17-09 and GP18-09) located on Valley Asphalt property were not included for the same reasons noted above for the first and second monitoring rounds.

- The results of the November 2018 soil gas field parameter monitoring round are provided in Attachment 2 - Table 3.

GHD conducted a review of previous and current field monitoring results for combustible gases (i.e., both unfiltered and filtered). Figures 2 and 3 illustrate monitoring results from 2009 through 2016, and from 2018, respectively. Each figure shows monitoring results for locations where combustible gas readings were greater than the lower explosive limit for methane (5%), on at least one occasion. As shown on Figure 2, the pre-2018 results indicate presence of total combustible gases and methane at six on-site soil gas probes[4], and one off-site soil gas probe[5] (GP-2) exceeding the 5% threshold. The 2018 results shown on Figure 3 indicate the presence of total combustible gases and methane exceeding 5% at three locations within the northern and central portions of the Site, including GP01-18 (at Valley Asphalt property)[6], GP02-09 and GP28-18 (both located in the central portion of the site). Total combustible gases was not detected above the 5% threshold at any of the remaining soil gas probe locations, with the exception of GP07-18 (at Jim City property). At GP07-18, a significant difference between the unfiltered and filtered results was identified (5.2% and 0.2%, respectively), and the filtered results are well below the 5% threshold for methane. This finding indicates that the instrument readings for total combustible gases (unfiltered methane) are affected by the presence of other hydrocarbons, and methane is not present above the 5% threshold, at GP07-18.

Field parameter monitoring for organic vapors, carbon dioxide, oxygen, and hydrogen sulfide completed in three monitoring rounds in 2018 are summarized below:

- Organic vapor readings, measured using a photoionization detector (PID), were typically less than 25 ppm during all three rounds. The greatest readings were recorded at GP07-18 located at Jim City property (up to 205 ppm, in August/September 2018).
- Carbon dioxide levels ranged from 0 to 16.4%, and oxygen levels ranged from 0 to 21.4%.
- Hydrogen sulfide was detected at 8 soil gas probe locations in the August/September monitoring round (max of 8 ppm at GP02-09), and at 5 soil gas probe locations in the November 2018 monitoring round (max of 4.3 ppm at USEPA GP-7[west]). Hydrogen sulfide was not detected during the March 2018 monitoring round.

---

4 Two of the on-site soil gas probes (GP17-09 and GP18-09) that exhibited elevated combustible gas readings in previous monitoring were not found in 2018 and hence were not monitored.

5 The off-site location (GP-2) is situated adjacent to the Dayton Power & Light facility. The soil gas impacts measured at GP-2 were determined to be unrelated to the SDD Site. See GHD's Technical Report: GP-2 Methane Monitoring Summary & Assessment, South Dayton Dump and Landfill Site, provided on December 12, 2016.

6 GHD notes that two soil gas probes at Valley Asphalt that are no longer accessible (GP17-09 and GP18-09) identified the presence of combustible gas prior to 2018 but current conditions have not been assessed.

Soil Gas Probe Sampling and Analysis

GHD completed soil gas sampling from August 14 to August 24, 2018 using 32 GHD soil gas probes in accordance with RI/FS Work Plan procedures. GHD submitted 38 samples (including one trip blank, one ambient air sample, and 4 field duplicates), to TestAmerica Knoxville for VOC (TO-15) analysis. GHD did not collect a sample from one GHD soil gas probe (GP08-09) due to insufficient gas flow. Field notes are provided in Attachment 3.

The validated analytical results are included in Tables 3 and 4, with screening criteria for commercial and residential land use, respectively. The analytical results indicate variable presence of VOCs. The locations with the greatest detected VOC concentrations include GP07-18 (Jim City) and GP01-18 (Valley Asphalt), and significantly lower concentrations were detected at the remaining locations. The spatial distribution of the VOC results is indicative of localized areas of soil gas impact at GP01-18 and GP07-18 potentially related to operations being conducted within the respective properties. Further discussion regarding the distribution of individual VOCs and comparison to screening criteria is provided below.

Comparison of Analytical Results to Screening Criteria

As noted above, Tables 3 and 4 also include generic screening criteria for commercial land use and residential land use, respectively. The screening criteria include:

- USEPA sub-slab or exterior soil gas concentration Vapor Intrusion Screening Levels (VISLs) conservatively calculated at the lower of a target cancer risk of $1x10^{-6}$ and a hazard quotient (HQ) of 0.1.
- Ohio EPA response action levels and removal management levels, from the Ohio EPA Guidance Document titled "*Recommendations Regarding Response Action Levels and Timeframes for Common Contaminants of Concern at Vapor Intrusion Sites in Ohio"*, dated August 2016.

As shown in Table 3, detected VOC concentrations exceeded the generic commercial criteria at the following locations:

- Valley Asphalt property: GP01-18 (chlorobenenze, vinyl chloride, benzene, ethylbenzene) and GP32-18 (TCE)
- Dryden Road businesses:
  - GP16-09 (vinyl chloride), GP19-18 (vinyl chloride), and GP20-18 (TCE) at Parcel 5171 (B&G Equipment & Truck Repair)
  - GP15-09 (TCE, 1,1-DCA) and GP31-18 (TCE, chloroform) at Parcel 5172 (tenants - S&J Precision, Overstreet Painting, NexGen Vending)
  - GP14-09 (TCE) at Parcel 5173 (tenant - Sim Trainer)
  - GP13-09 (1,1-DCA) at Parcel 5174 (tenant - Command Roofing)
  - GP12-09 (TCE) and GP23-13 (TCE) at Parcel 5175 (tenant – D. Dickinson Construction)

- The undeveloped central portion of the site, being part of Parcel 5177: GP03-09 (TCE), GP26-18 (TCE), GP27-18 (1,4-Dichlorobenzene, Benzene, Chlorobenzene), GP28-18 (Benzene, Chlorobenzene, vinyl chloride)
- Southern portion of site:
  - GP07-18 (1,2,4-Trimethylbenzene, BTEX, cyclohexane, hexane, isopropyl benzene, n-heptane) at Jim City property
  - GP09-09 (TCE) and GP10-09 (TCE) at [redacted] non-responsive

The soil gas probes that were sampled and had no detections that exceeded the generic commercial criteria include: GP02-09, GP04-09, GP05-09, GP06-09, GP11-09, GP21-09, GP22-13, GP24A-13, GP24B-13, GP25-18, GP29-18, GP30-18, GP33-18 and GP34-18 (see Table 3).

In addition to the above locations, eight other locations had detected concentrations exceeding the generic residential criteria (see Table 4), i.e., 26 of 32 soil gas probe locations had detected concentrations exceeding the generic residential criteria. The soil gas probes that were sampled and had no detections that exceeded the generic residential criteria include: GP04-09, GP06-09, GP11-09, GP24B-13, GP30-18, and GP34-18.

As indicated above, TCE is the most frequently detected and broadly distributed VOC with concentrations exceeding commercial screening criteria in August 2018 samples from the following soil gas probes: GP03-09; GP09-09; GP10-09; GP12-09; GP14-09; GP15-09 (also contains 1,1-Dichloroethane [1,1-DCA]); GP20-18; GP23-13; GP26-18; GP31-18 (also contains Chloroform); and GP32-18. The maximum detected TCE concentrations in August 2018 samples were identified at Parcel 5172 including GP31-18 (27,000 µg/m^3) and GP15-09 (3,400 µg/m^3); and Parcel 5171 at GP20-18 (6,700 µg/m^3). Other VOCs that were detected at concentrations exceeding commercial screening criteria exhibit a more isolated distribution, for example, vinyl chloride at four soil gas probes (maximum 2,500 µg/m^3) and chlorobenzene at three soil gas probes (maximum 110,000 µg/m^3). A distinctly different VOC profile was observed in the soil gas sample collected from Parcel 3753 (GP07-18), which identified exceedances of BTEX, hexane, n-heptane, 1,2,4-trimethylbenzene, cyclohexane, and isopropyl benzene; several of these compounds/contaminants are related to fuels and petroleum substances.

Discussion and Recommendations

Based on current land use, commercial activities are conducted on various property parcels within OU1. Potential residential exposure within OU1 is limited to one location, i.e., the elevated mobile home structure located on Parcel [redacted] non-responsive and the nearest soil gas probe is GP09-09. The soil gas sample collected in August 2018 from GP09-09 contained TCE at a concentration of 690 µg/m^3, which exceeds the USEPA VISL and the Ohio action levels for commercial and residential use. No other VOCs were detected at concentrations above commercial or residential screening criteria at GP09-09 in the August 2018 sample.

The previous sampling results at GP09-09 (in 2009) also indicate the presence of TCE at a concentration of 2,000 µg/m^3, which exceeds the USEPA VISL and the Ohio action levels for commercial and residential use. In 2009 Respondents and USEPA agreed that no further action was required for any of the residential and/or commercial buildings on [redacted]. The results from the 2012 crawl space air sample and duplicate sample at the mobile home structure (0.12 µg/m^3/ ND(0.16) µg/m^3) (CRA, Vapor Intrusion Investigation Summary Report. December 2012) did not exceed the then-current indoor air criteria that were conservatively identified as the applicable criteria[7] and are less than the current USEPA Residential Air RSL (0.21 µg/m^3). In order to assess current conditions and subject to agreement by the property owner, GHD proposes to collect an air sample from the crawl space at the mobile home structure during the summer of 2019 (in conjunction with the July vapor intrusion sampling event).

As noted above, other soil gas probe sample locations within areas of commercial land use in OU1 have detected VOC concentrations above screening criteria based on commercial land use, i.e., Valley Asphalt, Dryden Road businesses, and Jim City. Valley Asphalt has already implemented a VI mitigation program within their property, with USEPA oversight. The VI mitigation program implemented by the Respondents in 2013 addresses the Dryden Road business locations.

Jim City property was not included in the 2012 VI study conducted by the Respondents. The 2009 analytical results for GP07-09 did not indicate any exceedances of applicable criteria[8], which included comparison to residential criteria. Landfill gas/soil vapor probe GP07-09 could not be located in 2018, and was replaced with GP07-18. Unlike GP07-09, the soil vapor sample from GP07-18 contained benzene, toluene, ethylbenzene, xylenes (BTEX), hexane, and n-heptane at concentrations greater than USEPA VISLs for sub-slab from commercial structures; these compounds/contaminants are related to fuels and appear to be unrelated to the SDD site. GHD confirmed with the property owner that the building adjacent to GP07-18 (located on Parcel 3256) is used for equipment storage only.

Based on the above, GHD recommends the following:

- Regarding Parcel [redacted] property), inform the property owner of the findings based on the 2018 soil gas sampling results
- Regarding Parcel 3753 (Jim City property), inform the property owner of the findings based on the 2018 soil gas sampling results
- Complete the installation of the proposed soil gas probe within the East River Road property subject to obtaining property access or selection of a suitable alternate location
- Collect crawl space and outdoor ambient air samples from [redacted] structure) during the July VI sampling event, subject to property owner agreement.

---

7 Vapor Intrusion Investigation Summary Report. CRA, December 2012 (38443 Report 17)

8 "Results of the Landfill Gas/Soil Vapor Investigation", Conestoga-Rovers & Associates (CRA, now GHD), January 11, 2010 (038443Cibu-69)

- Collect soil gas sample from GP08-19 and GP35-19 for analyses of VOCs during the July VI sampling event.
- Complete the soil gas data assessment in accordance with the RI/FS Work Plan

Should you have any questions on the above, please do not hesitate to contact us.

Sincerely,

GHD

Julian Hayward

Notes:

J - Estimated concentration.
U - Not detected at the associated reporting limit.
UJ - Not detected; associated reporting limit is estimated.
1 - USEPA sub slab or exterior soil gas concentration Vapor Intrusion Screening Levels (VISLs) based on cancer risk 1E 06 and hazard quotient (HQ)=0.1
2 - Ohio EPA accelerated and urgent response action levels and chronic response action level and removal management levels, from the Ohio EPA Guidance Document titled "Recommendations Regarding Response Action Levels and Timeframes for Common Contaminants of Concern at Vapor Intrusion Sites in Ohio", dated August 2016.
- Concentration was greater than applicable criteria.

Notes:

J - Estimated concentration.
U - Not detected at the associated reporting limit.
UJ - Not detected; associated reporting limit is estimated.
1 - USEPA sub slab or exterior soil gas concentration Vapor Intrusion Screening Levels (VISLs) based on cancer risk 1E 06 and hazard quotient (HQ)=0.1
2 - Ohio EPA accelerated and urgent response action levels and chronic response action level and removal management levels, from the Ohio EPA Guidance Document titled "Recommendations Regarding Response Action Levels and Timeframes for Common Contaminants of Concern at Vapor Intrusion Sites in Ohio", dated August 2016.
- Concentration was greater than applicable criteria.

Notes:

J - Estimated concentration.
U - Not detected at the associated reporting limit.
UJ - Not detected; associated reporting limit is estimated.
1 - USEPA sub slab or exterior soil gas concentration Vapor Intrusion Screening Levels (VISLs) based on cancer risk 1E 06 and hazard quotient (HQ)=0.1
2 - Ohio EPA accelerated and urgent response action levels and chronic response action level and removal management levels, from the Ohio EPA Guidance Document titled "Recommendations Regarding Response Action Levels and Timeframes for Common Contaminants of Concern at Vapor Intrusion Sites in Ohio", dated August 2016.
- Concentration was greater than applicable criteria.

Notes:

J - Estimated concentration.
U - Not detected at the associated reporting limit.
UJ - Not detected; associated reporting limit is estimated.
1 - USEPA sub slab or exterior soil gas concentration Vapor Intrusion Screening Levels (VISLs) based on cancer risk 1E 06 and hazard quotient (HQ)=0.1
2 - Ohio EPA accelerated and urgent response action levels and chronic response action level and removal management levels, from the Ohio EPA Guidance Document titled "Recommendations Regarding Response Action Levels and Timeframes for Common Contaminants of Concern at Vapor Intrusion Sites in Ohio", dated August 2016.
- Concentration was greater than applicable criteria.

Notes:

J - Estimated concentration.
U - Not detected at the associated reporting limit.
UJ - Not detected; associated reporting limit is estimated.
1 - USEPA sub slab or exterior soil gas concentration Vapor Intrusion Screening Levels (VISLs) based on cancer risk 1E 06 and hazard quotient (HQ)=0.1
2 - Ohio EPA accelerated and urgent response action levels and chronic response action level and removal management levels, from the Ohio EPA Guidance Document titled "Recommendations Regarding Response Action Levels and Timeframes for Common Contaminants of Concern at Vapor Intrusion Sites in Ohio", dated August 2016.
- Concentration was greater than applicable criteria.

Notes:

J - Estimated concentration.
U - Not detected at the associated reporting limit.
UJ - Not detected; associated reporting limit is estimated.
1 - USEPA sub slab or exterior soil gas concentration Vapor Intrusion Screening Levels (VISLs) based on cancer risk 1E 06 and hazard quotient (HQ)=0.1
2 - Ohio EPA accelerated and urgent response action levels and chronic response action level and removal management levels, from the Ohio EPA Guidance Document titled "Recommendations Regarding Response Action Levels and Timeframes for Common Contaminants of Concern at Vapor Intrusion Sites in Ohio", dated August 2016.
- Concentration was greater than applicable criteria.

Notes:

J - Estimated concentration.
U - Not detected at the associated reporting limit.
UJ - Not detected; associated reporting limit is estimated.
1 - USEPA sub slab or exterior soil gas concentration Vapor Intrusion Screening Levels (VISLs) based on cancer risk 1E 06 and hazard quotient (HQ)=0.1
2 - Ohio EPA accelerated and urgent response action levels and chronic response action level and removal management levels, from the Ohio EPA Guidance Document titled "Recommendations Regarding Response Action Levels and Timeframes for Common Contaminants of Concern at Vapor Intrusion Sites in Ohio", dated August 2016.
- Concentration was greater than applicable criteria.

Notes:

J - Estimated concentration.
U - Not detected at the associated reporting limit.
UJ - Not detected; associated reporting limit is estimated.
1 - USEPA sub slab or exterior soil gas concentration Vapor Intrusion Screening Levels (VISLs) based on cancer risk 1E 06 and hazard quotient (HQ)=0.1
2 - Ohio EPA accelerated and urgent response action levels and chronic response action level and removal management levels, from the Ohio EPA Guidance Document titled "Recommendations Regarding Response Action Levels and Timeframes for Common Contaminants of Concern at Vapor Intrusion Sites in Ohio", dated August 2016.
- Concentration was greater than applicable criteria.

Notes:

J - Estimated concentration.
U - Not detected at the associated reporting limit.
UJ - Not detected; associated reporting limit is estimated.
1 - USEPA sub slab or exterior soil gas concentration Vapor Intrusion Screening Levels (VISLs) based on cancer risk 1E 06 and hazard quotient (HQ)=0.1
2 - Ohio EPA accelerated and urgent response action levels and chronic response action level and removal management levels, from the Ohio EPA Guidance Document titled "Recommendations Regarding Response Action Levels and Timeframes for Common Contaminants of Concern at Vapor Intrusion Sites in Ohio", dated August 2016.
- Concentration was greater than applicable criteria.

Subject:	**Analytical Results and Full Validation Soil Sampling ITW Corporate-South Dayton Dump and Landfill Moraine, Ohio January, July, and August 2018**		

1. Introduction

This document details a validation of analytical results for soil samples collected in support of the Soil Sampling at the ITW-South Dayton Dump and Landfill Site during January, July, and August 2018. Samples were submitted to TestAmerica Laboratories, Inc., located in North Canton, Ohio. A sample collection and analysis summary is presented in Table 1. The validated analytical results are summarized in Table 2A and 2B. A summary of the analytical methodology is presented in Table 3. Geotechnical sample results were given a cursory review and are included in Table 2A and 2B.

Full Contract Laboratory Program (CLP) equivalent raw data deliverables were provided by the laboratory. Evaluation of the data was based on information obtained from the finished data sheets, raw data, chain of custody forms, calibration data, blank data, recovery data from surrogate spikes, laboratory control samples (LCS) and matrix spike (MS) samples. The assessment of analytical and in-house data included checks for: data consistency (by observing comparability of duplicate analyses), adherence to accuracy and precision criteria, and transmittal errors.

The QA/QC criteria by which these data have been assessed are outlined in the analytical methods referenced in Table 3 and applicable guidance from the documents entitled:

i) "Remedial Investigation/Feasibility Study (RI/FS) Work Plan for Operable Units 1 and 2, Appendix E – Quality Assurance Project Plan", September 20, 2017

ii) "USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review", USEPA 540-R-08-01, June 2008

Item ii) will subsequently be referred to as the "Guidelines" in this Memorandum.

2. Sample Holding Time and Preservation

The sample holding time criteria for the analyses are summarized in Table 3. Sample chain of custody documents and analytical reports were used to determine sample holding times. All samples were prepared and analyzed within the required holding times.

All samples were properly preserved, delivered on ice, and stored by the laboratory at the required temperature (0-6°C).

3. Gas Chromatography/Mass Spectrometer (GC/MS) – Tuning and Mass Calibration (Instrument Performance Check) and Inductively Coupled Plasma/Mass Spectrometer (ICP/MS)

Prior to volatile organic compound (VOC), the GC/MS instrumentation is tuned to ensure optimization over the mass range of interest. To evaluate instrument tuning, the method requires the analysis of the specific tuning compound bromofluorobenzene (BFB). The resulting spectra must meet the criteria cited in the method before analysis is initiated. Analysis of the tuning compound must then be repeated every 12 hours throughout sample analysis to ensure the continued optimization of the instrument.

The tuning compound was analyzed at the required frequency throughout the VOC analysis periods. All tuning criteria were met indicating that proper optimization of the instrumentation was achieved.

4. Initial Calibration - Organic Analyses

To quantify VOCs of interest in samples, calibration of the GC/MS over a specific concentration range must be performed. Initially, a five-point calibration curve containing all compounds of interest is analyzed to characterize instrument response for each analyte over a specific concentration range. Linearity of the calibration curve and instrument sensitivity are evaluated against the following criteria:

i) All relative response factors (RRFs) must be greater than or equal to 0.050 (greater than or equal to 0.010 for compounds that exhibit poor response)

ii) The percent relative standard deviation (%RSD) values must not exceed 20.0 percent (40.0 percent for compounds that exhibit poor response) or a minimum correlation coefficient (R) or 0.995 or minimum coefficient of determination (R^2) of 0.99 if linear and quadratic equation calibration curves are used

The initial calibration data for VOCs were reviewed. All compounds met the above criteria for sensitivity and linearity.

5. Continuing Calibration - Organic Analyses

To ensure that instrument calibration for VOC analyses is acceptable throughout the sample analysis period, continuing calibration standards must be analyzed and compared to the initial calibration curve every 12 hours.

The following criteria were employed to evaluate continuing calibration data:

i) All RRF values must be greater than or equal to 0.050 (greater than or equal to 0.010 for compounds that exhibit poor response)

ii) Percent difference (%D) values must not exceed 25.0 percent (40.0 percent for compounds that exhibit poor response)

Calibration standards were analyzed at the required frequency, and the results met the above criteria for instrument sensitivity and stability with the exception of the sample results presented with qualifiers in Table 4.

6. Laboratory Blank Analyses

Method blanks are prepared from a purified matrix and analyzed with investigative samples to determine the existence and magnitude of sample contamination introduced during the analytical procedures.

For this study, laboratory method blanks were analyzed at a minimum frequency of 1 per 20 investigative samples and/or 1 per analytical batch.

Most method blank results were non-detect. Table 5 presents the sample results that were qualified as non-detect due to analyte concentrations in the method blanks.

7. Surrogate Spike Recoveries

In accordance with the methods employed, all samples, blanks, and QC samples analyzed for organics are spiked with surrogate compounds prior to sample analysis. Surrogate recoveries provide a means to evaluate the effects of laboratory performance on individual sample matrices.

All samples submitted for VOC determinations were spiked with the appropriate number of surrogate compounds prior to sample analysis.

Surrogate recoveries were assessed against laboratory control limits. Due to dilutions equal to or greater than 5 times that were necessary to successfully analyze the samples, several surrogate recoveries in investigative samples analyzed for VOCs were not assessed. Most remaining surrogate recoveries were within the laboratory criteria. Table 6 presents the sample results that were qualified due to outlying surrogate recoveries.

8. Internal Standards (IS) Analyses

IS data were evaluated for all VOC sample analyses.

To ensure that changes in the GC/MS sensitivity and response do not affect sample analysis results IS compounds are added to each sample prior to analysis. All results are then calculated as a ratio of the IS responses.

The sample IS results were evaluated against the following criteria:

i) The retention time of the IS must not vary more than ±30 seconds from the associated calibration standard.

ii) IS area counts must not vary by more than a factor of two (-50 percent to +100 percent) from the associated calibration standard.

All VOC IS recoveries and retention times met the above criteria.

9. Laboratory Control Sample (LCS) Analyses

LCS are prepared and analyzed as samples to assess the analytical efficiencies of the methods employed, independent of sample matrix effects.

For this study, LCS were analyzed at a minimum frequency of 1 per 20 investigative samples and/or 1 per analytical batch.

The LCS contained all compounds of interest. Where LCS recoveries were above the control limits, non-detect sample results were not impacted by the implied high bias and were not qualified. Table 7 presents the qualified sample results due to outlying LCS results. All remaining LCS recoveries were within the laboratory control limits demonstrating acceptable analytical accuracy.

10. Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analyses

To evaluate the effects of sample matrices on the preparation process, measurement procedures, and accuracy of a particular analysis, samples are spiked with a known concentration of the analyte of concern and analyzed as MS/MSD samples. The RPD between the MS and MSD is used to assess analytical precision.

MS/MSD analyses were performed as specified in Table 1.

All percent recoveries and RPD values were within the laboratory control limits demonstrating acceptable analytical accuracy and precision with the exception of the VOC sample result presented with a qualifier in Table 8.

11. Analyte Reporting

The laboratory reported detected results down to the laboratory's method detection limit (MDL) for each analyte adjusted for specific sample dilutions, weights, and volumes. Positive analyte detections less than the RL but greater than the sample-specific MDL were qualified as estimated (J) in Table 2A and 2B unless qualified otherwise in this memorandum. Non-detect results were presented as non-detect at the sample specific MDL in Table 2A and 2B.

All soil results were reported on a dry weight basis.

12. Target Compound Identification

To minimize erroneous compound identification during organic analyses, qualitative criteria including compound retention time and mass spectra were evaluated according to the identification criteria established by the methods. The organic compounds reported adhered to the specified identification criteria.

13. Conclusion

Based on the assessment detailed in the foregoing, the data summarized in Table 2A and 2B are acceptable with the specific qualifications noted herein.

Memorandum

October 2, 2018

To:	Julian Hayward	Ref. No.:	038443-202
From:	Angela Bown/cs/44-NF	Tel:	513-942-4750
cc:	Valerie Chan, Brent Ramdial		
Subject:	**Analytical Results and Full Validation Soil Vapor Sampling South Dayton Dump and Landfill Illinois Tool Works, Inc. Moraine, Ohio August 2018**		

1. Introduction

This document details a validation of analytical results for air samples collected in support of the Soil Vapor Sampling at the South Dayton Dump and Landfill site during August 2018. Samples were submitted to TestAmerica Laboratories, Inc. (TestAmerica) located in Knoxville, Tennessee. A sample collection and analysis summary is presented in Table 1. The validated analytical results are summarized in Table 2. A summary of the analytical methodology is presented in Table 3.

Full Contract Laboratory Program (CLP) equivalent raw data deliverables were provided by the laboratory. Evaluation of the data was based on information obtained from the finished data sheets, raw data, chain of custody forms, calibration data, blank data, and recovery data from surrogate spikes and laboratory control samples (LCS), and field QA/QC samples. The assessment of analytical and in-house data included checks for: data consistency (by observing comparability of duplicate analyses), adherence to accuracy and precision criteria, and transmittal errors.

The QA/QC criteria by which these data have been assessed are outlined in the analytical method referenced in Table 3 and applicable guidance from the documents entitled:

i) "Quality Assurance Project Plan (QAPP)", Revision 01, November 2014

ii) "USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review", USEPA 540-R-08-01, June 2008

iii) "Vapor Intrusion Technical Guidance", New Jersey Department of Environmental Protection (NJDEP) Site Remediation Program, March 2013, Version 3.1

Items ii) and iii) will subsequently be referred to as the "Guidelines" in this Memorandum.

2. Sample Holding Time and Preservation

The sample holding time criterion for the analysis is presented in Table 3. Sample chain of custody documents and analytical reports were used to determine sample holding times. All samples were analyzed within the required holding times.

All sample canisters were received at the laboratory in good condition and within acceptable canister pressure range of –1 inch of mercury (Hg) to –10 inches of Hg, indicating samples were still under vacuum upon receipt.

3. Gas Chromatography/Mass Spectrometer (GC/MS) – Tuning and Mass Calibration (Instrument Performance Check)

Prior to volatile organic compound (VOC) analysis, GC/MS instrumentation is tuned to ensure optimization over the mass range of interest. To evaluate instrument tuning, the method requires the analysis of the specific tuning compound 4-bromofluorobenzene (BFB). The resulting spectra must meet the criteria cited in the method before analysis is initiated. Analysis of the tuning compound must then be repeated every 24 hours throughout sample analysis to ensure the continued optimization of the instrument.

The tuning compound was analyzed at the required frequency throughout VOC analysis periods. All tuning criteria were met indicating that proper optimization of the instrumentation was achieved.

4. Initial Calibration - Organic Analyses

To quantify VOCs of interest in samples, calibration of the GC/MS over a specific concentration range must be performed. Initially, a five-point calibration curve containing all compounds of interest is analyzed to characterize instrument response for each analyte over a specific concentration range. Linearity of the calibration curve and instrument sensitivity are evaluated against the following criteria:

i) All relative response factors (RRFs) must be greater than or equal to 0.050

ii) The percent relative standard deviation (%RSD) values must not exceed 30.0 percent; or a minimum correlation coefficient (R) and minimum coefficient of determination (R^2) of 0.99 if linear and quadratic equation calibration curves are used

The initial calibration data for VOCs were reviewed. All compounds met the above criteria for sensitivity and linearity.

5. Continuing Calibration - Organic Analyses

To ensure that instrument calibration for VOC analyses is acceptable throughout the sample analysis period, continuing calibration standards must be analyzed and compared to the initial calibration curve every 24 hours.

The following criteria were employed to evaluate continuing calibration data:

i) All RRF values must be greater than or equal to 0.050

ii) Percent difference (%D) values must not exceed 30.0 percent

Calibration standards were analyzed at the required frequency and the results met the above criteria for instrument sensitivity and stability with the exception of the sample results presented with qualifiers in Table 4.

6. Laboratory Blank Analyses

Method blanks are prepared from a purified matrix and analyzed with investigative samples to determine the existence and magnitude of sample contamination introduced during the analytical procedures.

For this study, laboratory method blanks were analyzed at a minimum frequency of 1 per 20 investigative samples and/or 1 per analytical batch.

All method blank results were non-detect indicating that laboratory contamination was not a factor for this investigation.

Canister batch certification blank results were also reviewed. Most canister blank results were non-detect for the analytes of concern. Acetone was detected at a low level in one canister blank. All associated sample results were either non-detect or were significantly greater than the blank value. Qualification was deemed unnecessary on this basis.

7. Surrogate Spike Recoveries

Individual sample performance for organic analyses was monitored by assessing the results of surrogate compound percent recoveries. Surrogate percent recoveries are reviewed against the laboratory developed control limits provided in the analytical report.

Although surrogate spikes are not required by Method TO-15, all samples were spiked with BFB. The surrogate recovery acceptance criteria were met for all samples indicating acceptable overall laboratory performance.

8. Internal Standards (IS) Analyses

IS data were evaluated for all VOC sample analyses.

To ensure that changes in the GC/MS sensitivity and response do not affect sample analysis results IS compounds are added to each sample prior to analysis. All results are then calculated as a ratio of the IS responses.

The sample IS results were evaluated against the following criteria:

i) The retention time of the IS must not vary more than ±20 seconds from the associated calibration standard.

ii) IS area counts must not vary by more than ± 40 percent from the associated calibration standard

All organic IS recoveries and retention times met the above criteria.

9. Laboratory Control Sample (LCS) Analyses

LCS are prepared and analyzed as samples to assess the analytical efficiencies of the methods employed, independent of sample matrix effects.

For this study, LCS were analyzed at a minimum frequency of 1 per 20 investigative samples and/or 1 per analytical batch.

The LCS contained all compounds of interest. Most LCS recoveries were within the laboratory control limits, demonstrating acceptable analytical accuracy. Table 5 presents the sample results that were qualified due to outlying LCS recoveries.

10. Field QA/QC Samples

The field QA/QC consisted of one trip blank sample and four field duplicate sample sets.

Trip Blank Sample Analysis

To evaluate contamination from sample collection, transportation, storage, and analytical activities, one trip blank was submitted to the laboratory for VOC analysis. All results were non-detect for the compounds of interest with the exception of chlorodifluoromethane and tert-butyl alcohol that were detected at low levels. The associated sample results were either non-detect or were significantly greater than the trip blank value. Qualification of the sample results was deemed unnecessary on this basis.

Field Duplicate Sample Analysis

To assess the analytical and sampling protocol precision, four field duplicate sample sets were collected and submitted "blind" to the laboratory, as specified in Table 1. The RPDs associated with these duplicate samples should be less than the advisory limit of 50 percent. If the reported concentration in either the investigative sample or its duplicate is less than five times the reporting limit (RL), the evaluation criterion is one times the RL value for air samples.

Most field duplicate results were within acceptable agreement demonstrating acceptable sampling and analytical precision. Table 6 presents the sample results that were qualified due to variability in the field duplicate samples.

11. Analyte Reporting

The laboratory reported detected results down to the laboratory's method detection limit (MDL) for each analyte, adjusted for volumes and dilution factors. Positive analyte detections less than the RL but greater than the adjusted MDL were qualified as estimated (J) in Table 2 unless qualified otherwise in this memorandum.

Non-detect results were presented as non-detect at the adjusted MDL in Table 2.

12. Target Compound Identification

To minimize erroneous compound identification during organic analyses, qualitative criteria including compound retention time and mass spectra were evaluated according to the identification criteria established by the methods. The samples identified in Table 1 were reviewed. The organic compounds reported adhered to the specified identification criteria.

For one sample result, the laboratory noted that the peak identified by the data system exhibited chromatographic interference that could not be resolved. Because of this, there is reason to suspect there may be a high bias for this result. Table 7 presents the sample result that was qualified due to matrix interference.

13. Conclusion

Based on the assessment detailed in the foregoing, the data summarized in Table 2 are acceptable with the specific qualifications noted herein.

Subject: **Analytical Results and Full Validation**
Soil Sampling for Gas Probe Installation
ITW Corporate-South Dayton Dump and Landfill
Moraine, Ohio
January 2019

1. Introduction

This document details a validation of analytical results for soil samples collected in support of the Soil Sampling for Gas Probe Installation Event at the Moraine, Ohio site during January 2019. Samples were submitted to TestAmerica Laboratories, Inc. (TA) located in North Canton, Ohio. A sample collection and analysis summary is presented in Table 1. The validated analytical results are summarized in Table 2. A summary of the analytical methodology is presented in Table 3.

Full Contract Laboratory Program (CLP) equivalent raw data deliverables were provided by the laboratory. Evaluation of the data was based on information obtained from the finished data sheets, raw data, chain of custody form, calibration data, blank data, and recovery data from surrogate spikes/laboratory control samples (LCS). The assessment of analytical and in-house data included checks for data consistency (by observing comparability of duplicate analyses), adherence to accuracy and precision criteria and transmittal errors. A cursory review of the gravimetric and geotechnical results was also performed and resulted in no qualification of the associated data.

The QA/QC criteria by which these data have been assessed are outlined in the analytical methods referenced in Table 3 and applicable guidance from the documents entitled:

i) "Remedial Investigation/Feasibility Study (RI/FS) Work Plan for Operable Units 1 and 2, Appendix E – Quality Assurance Project Plan", September 20, 2017

ii) "USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review", USEPA 540-R-08-01, June 2008

Item ii) will subsequently be referred to as the "Guidelines" in this Memorandum.

2. Sample Holding Time and Preservation

The sample holding time criteria for the analyses are summarized in Table 3. Sample chain of custody documents and analytical reports were used to determine sample holding times. All samples were prepared and analyzed within the required holding times.

All samples were properly preserved, delivered on ice, and stored by the laboratory at the required temperature (0-6°C).

3. Gas Chromatography/Mass Spectrometer (GC/MS) – Tuning and Mass Calibration (Instrument Performance Check)

Prior to volatile organic compound (VOC) analysis, the GC/MS instrumentation is tuned to ensure optimization over the mass range of interest. To evaluate instrument tuning, the method requires the analysis of the specific tuning compound, bromofluorobenzene (BFB). The resulting spectra must meet the criteria cited in the method before analysis is initiated. Analysis of the tuning compound must then be repeated every 12 hours throughout sample analysis to ensure the continued optimization of the instrument.

The tuning compound was analyzed at the required frequency throughout the VOC analysis periods. All tuning criteria were met indicating that proper optimization of the instrumentation was achieved.

4. Initial Calibration

To quantify the VOCs of interest in samples, calibration of the GC/MS over a specific concentration range must be performed. Initially, a five-point calibration curve containing all compounds of interest is analyzed to characterize instrument response for each analyte over a specific concentration range. Linearity of the calibration curve and instrument sensitivity are evaluated against the following criteria:

i) All relative response factors (RRFs) must be greater than or equal to 0.050 (greater than or equal to 0.010 for compounds that exhibit poor response)

ii) The percent relative standard deviation (%RSD) values must not exceed 20.0 percent (40.0 percent for compounds that exhibit poor response) or a minimum correlation coefficient (R) and minimum coefficient of determination (R^2) of 0.995 and 0.99, respectively, if linear and quadratic equation calibration curves are used

The initial calibration data for VOCs were reviewed. All compounds met the above criteria for sensitivity and linearity.

5. Continuing Calibration

To ensure that instrument calibration for VOC analyses is acceptable throughout the sample analysis period, continuing calibration standards must be analyzed and compared to the initial calibration curve every 12 hours.

The following criteria were employed to evaluate continuing calibration data:

i) All RRF values must be greater than or equal to 0.050 (greater than or equal to 0.010 for compounds that exhibit poor response)

ii) Percent difference (%D) values must not exceed 25.0 percent (40.0 percent for compounds that exhibit poor response)

Calibration standards were analyzed at the required frequency, and the results met the above criteria for instrument sensitivity and stability.

6. Laboratory Blank Analyses

Method blanks are prepared from a purified matrix and analyzed with investigative samples to determine the existence and magnitude of sample contamination introduced during the analytical procedures.

For this study, laboratory method blanks were analyzed at a minimum frequency of 1 per 20 investigative samples and/or 1 per analytical batch.

All method blank results were non-detect or did not impact the associated non-detect sample results.

7. Surrogate Spike Recoveries

In accordance with the methods employed, all samples, blanks, and QC samples analyzed for organics are spiked with surrogate compounds prior to sample extraction and/or analysis. Surrogate recoveries provide a means to evaluate the effects of laboratory performance on individual sample matrices.

All samples submitted for organic determinations were spiked with the appropriate number of surrogate compounds prior to sample extraction and/or analysis.

Surrogate recoveries were assessed against laboratory control limits. All surrogate recoveries were within the laboratory criteria.

8. Internal Standards (IS) Analyses

IS data were evaluated for all VOC sample analyses.

To ensure that changes in the GC/MS sensitivity and response do not affect sample analysis results IS compounds are added to each sample prior to analysis. All results are then calculated as a ratio of the IS responses.

The sample IS results were evaluated against the following criteria:

i) The retention time of the IS must not vary more than ±30 seconds from the associated calibration standard

ii) IS area counts must not vary by more than a factor of two (-50 percent to +100 percent) from the associated calibration standard

All VOC IS recoveries and retention times met the above criteria.

9. Laboratory Control Sample Analyses

LCSs are prepared and analyzed as samples to assess the analytical efficiencies of the methods employed, independent of sample matrix effects.

For this study, LCSs were analyzed at a minimum frequency of 1 per 20 investigative samples and/or 1 per analytical batch.

The LCS contained all compounds of interest or the compounds specified in the method. All LCS recoveries were within the laboratory control limits demonstrating acceptable analytical accuracy.

10. Analyte Reporting

The laboratory reported detected results down to the laboratory's method detection limit (MDL) for each analyte adjusted for specific sample dilutions and volumes. Positive analyte detections less than the reporting limit (RL) but greater than the sample-specific MDL were qualified as estimated (J) in Table 2. Non-detect results were presented as non-detect at the sample specific MDL in Table 2.

Soil samples were reported on dry weight basis.

11. Target Compound Identification

To minimize erroneous compound identification during organic analyses, qualitative criteria including compound retention time and mass spectra (if applicable) were evaluated according to the identification criteria established by the methods. The samples identified in Table 1 were reviewed. The organic compounds reported adhered to the specified identification criteria.

12. Conclusion

Based on the assessment detailed in the foregoing, the data summarized in Table 2 are acceptable without qualification.
