Mark,

I can address the spatial data section. You may want to check with Jeff Mosal, copied on this email, for the sampling and monitoring data.

Here is the text you provided with only a minor modification:

1. Spatial data should be submitted: (1) in the ESRI File Geodatabase format and (2) as unprojected geographic coordinates in decimal degree format using North American Datum 1983 (NAD83) or World Geodetic System 1984 (WGS84) as the datum. If applicable, submissions should include the collection method(s). Projected coordinates may optionally be included but must be documented. Spatial data should be accompanied by metadata, and such metadata should be compliant with the Federal Geographic Data Committee (FGDC) Content Standard for Digital Geospatial Metadata and its EPA profile, the EPA Geospatial Metadata Technical Specification. An add-on metadata editor for ESRI software, the EPA Metadata Editor (EME), complies with these FGDC and EPA metadata requirements and is available at https://edg.epa.gov/EME/.

I attached our GIS deliverable guidance document if you feel it useful to include as an appendix.

Subject: Your Input Is Requested re EDD/Spatial File Format

Tony and John,
Rob Parker suggested that I check in with you regarding current regional office practice. I am in the process of drafting an administrative order on consent, and need your input on the standard regional EDD format and the Regionally-preferred spatial file format (see copy & paste below). I would greatly appreciate it if you would send me appropriate language for inclusion in the AOC. We are trying to finalize the AOC by COB on Wednesday.
Thanks!
-Mark

2. Technical Specifications for Deliverables. Sampling and monitoring data should be submitted in standard regional Electronic Data Deliverable (EDD) format. [**Specify the EDD format that the Region uses.**] Other delivery methods may be allowed if electronic direct submission presents a significant burden or as technology changes.

3. Spatial data, including spatially-referenced data and geospatial data, should be submitted: (1) in the ESRI File Geodatabase format [**or insert Regionally-preferred spatial file format**]; and (2) as unprojected geographic coordinates in decimal degree format using North American Datum 1983 (NAD83) or World Geodetic System 1984 (WGS84) as the datum. If applicable, submissions should include the collection method(s). Projected coordinates may optionally be included but must be documented. Spatial data should be accompanied by metadata, and such metadata should be compliant with the Federal Geographic Data Committee (FGDC) Content Standard for Digital Geospatial Metadata and its EPA profile, the EPA Geospatial

Metadata Technical Specification. An add-on metadata editor for ESRI software, the EPA Metadata Editor (EME), complies with these FGDC and EPA metadata requirements and is available at https://edg.epa.gov/EME/.
