# Upper Columbia River Residential Soils Study: Soil Data, Lead and Arsenic Samples

(b) (6)

(b) (6)

Incremental composite soil samples: Soil taken from 30 locations in each decision unit (DU) were mixed together to make a single sample.

**Incremental Composite Sample Concentrations**

Less than 250 ppm of lead and less than 20 ppm of arsenic. No action required.

Greater than 250 ppm of lead and/or greater than 20 ppm of arsenic. Recommend using the Soil Safety Guidelines described in the brochure included with this map.

**Discrete Soil Sample Concentrations**

Samples collected from 1 inch below surface down to about 6 inches deep.
