Subject: 2009-10 ES Units with Cs-137 & Ra-226 Uncertainty

Bill,

Here is a spreadsheet of all the ES Unit samples analyzed on-site between 2009 and 2010 (total: 7,145 samples). The excel table displays the values for sample activity, uncertainty, 2 Sigma, MDA and any respective lab qualifiers for both the Cs-137 and Ra-226 radionuclides. Also attached in the email, is an updated excel file of "2009-10 TU & ESU with Remediation.xlsx" that now displays the Ra-226 uncertainty values for the listed 2009-10 ES Units that required remediation activities. Please let me know if you want an alternate formatting or additional information added. Please continue to note, these files were meant as a collection of reference data and the tables contained within are not formatted for printing.

Thank you,
