Report: 03/12/2009- Applicable Rules: 203
Along with Supervising Inspection Mark VeederAu, we arrived at Arndo, facility #499, to perform a compliance inspection. The facility is located at 5141 Firestone Place, South Gate 90280, in Sector LC. The facility manufactures various run-flat tire systems using polyurethane materials. They are used to fill construction vehicle tires. We met with Mr. Tom Watson, Plant Manager, and Mr. Jose Santanilla, Plant Supervisor. Both accompanied us during our inspection.

Facility operated 12 different mixing tanks/reaction vessels, all of which were operating under valid AQMD permits. Tanks that were heated were done so electrically. 4 of the tanks were not being used and have been removed from the plant, they were: Permits M16086, M15867, M16968, and M15861. I advised Mr. Watson to inactivate these permits. Facility also operated 1 oven under permit D01982, which was used strictly for softening of raw materials in order to be able to pump the materials. Oven is currently permitted and permit states the oven was electrically heated. However, during our inspection, we verified that the oven was indeed powered by natural gas. We also concluded that the oven is exempt from permitting per R219(j)(4). As a result of the exemption, Rule 1147 is not applicable.

Blending tank #18, permit F83246, is a tank where powder is added and thus, is associated with a baghouse which operates under permit F60508. Baghouse was properly equipped with a magnehelic gauge. None of the other permits had any conditions. There were also 4 storage tanks used to store PolyOls, exempt from permitting per R219(m)(21). Facility was operating in compliance at the time of our inspection and we departed the facility.
