Subject:	May 10th Frisco lead data
Date:	Friday, May 24, 2013 11:23:48 AM
Attachments:	Exide data May 10-13.xlsx

Attached is the May 10th ambient lead monitoring data for the Frisco area. The monitor with the highest reading was the Eubanks monitor, with a reading of 0.00995 micrograms per cubic meter. The wind speed was between 2.3 to 6.8 miles per hour, with a maximum wind gust of 13.9 mph. The wind direction was mainly from the east-northeast to the north.

On May 10th, Exide and its contractors were conducting decontamination, and demolition activities at the site. Work was performed for approximately seven hours on this day.

Lead/cadmium sampling was conducted on this day by the Exide contractor. Monitoring was conducted for approximately 10 hours. One of the monitors nearest the Eubanks monitor had a reading of <0.17 micrograms per cubic meter. Note that the value was listed as being below the Limit of Detection, and the testing result is less than the numerical value listed and could range from 0.0 to 0.17 micrograms per cubic meter.
