Subject:	Frisco lead data for June 21st.
Date:	Tuesday, July 09, 2013 4:18:06 PM
Attachments:	Exide data June 21-13.xlsx

Attached is the June 21st ambient lead monitoring data for the Frisco area. The monitor with the highest reading was the Eubanks monitor, with a reading of 0.07184 micrograms per cubic meter. The wind speed was between 4.6 to 9.9 miles per hour, with a maximum wind gust of 19.4 mph. The wind direction was mainly out of the south.

On June 15th, Exide and its contractors were conducting decontamination and demolition activities at the site. Work times during the day were as follow:

Start	Stop
7:00	8:41
9:00	9:25
9:33	10:12
10:30	11:30
12:30	12:38
13:15	13:40
13:58	14:27
14:49	15:30
15:48	16:26

Most of the work stoppage was due to high winds.

Exide's contractor conducted lead sampling for approximately 10 hours. The monitor nearest the Eubanks monitor had a reading of <0.18 micrograms per cubic meter. Note that the value was listed as being below the Limit of Detection, and the testing result is less than the numerical value listed and could range from 0.0 to 0.18 micrograms per cubic meter.
