Dear Sir:

USEC Inc's Portsmouth National Emission Standards for Hazardous Air Pollutants (NESHAP) Radionuclide Emissions Report for Calendar Year 2013

Enclosed is a certified copy of the annual NESHAP report required under 40 CFR 61.94 from USEC Inc for airborne emissions of radionuclides from the U. S. Department of Energy (DOE) Portsmouth Reservation (PORTS) during calendar year 2013. The PORTS site includes operations conducted by two separate entities. USEC Inc has installed and is operating the American Centrifuge Lead Cascade and plans to install a commercial American Centrifuge Plant in a combination of existing and new facilities on the PORTS site. DOE is carrying out various environmental restoration activities, including deconversion of accumulated depleted UF6 to uranium oxides, decontamination and decommissioning of the PORTS Gaseous Diffusion Plant and waste handling activities. This report addresses the combined public dose attributable to both entities, but only describes USEC Inc's activities. DOE is submitting a report that also addresses the combined public dose, but describes only their activities. The combined dose to the most exposed individual for 2013 was 0.047 millirem (mrem), which is below the standard of 10 mrem per year in 40 CFR 61.92.

USEC, Inc.
American Centrifuge Plant
3930 U.S. Route 23 South – PO Box 628, ,Piketon, OH 45661
