Hi Jim – Once you (and I) have had time to read through this and digest it a bit let's plan on talking. I just spoke with Ted Diers from DES and the April 5 meeting referenced below doesn't include EPA (at least at this point). Thanks, dan

Here is the response from the Coalition questioning the nitrogen loading limits. Includes an analysis from a Tufts University professor.

Good morning Clark,
Thank you for your letter dated March 18, 2019. Attached is the Coalition's response to your letter. We look forward to furthering the discussion on a watershed permitting approach at the meeting scheduled for this Friday April 5th. The communities are committed to doing whatever is necessary to protect the estuary and its unique habitat based on sound science and analysis.
Best Regards,

Dean Peschel
