Tonya
The denial from the City only states that DPI creates a bias. They were asking for everything, that they knew we were already providing to USEPA for their approval to perform the investigation. Ameren was not going to provide it to them until approval from USEPA and MDNR was obtained. We just needed to know if we could have access once the Agencies approval was obtained.
It is mainly in our meetings that the City representatives stated that they would not allow direct push investigation to occur.

Everyone
Ameren received this response from the City of St. Charles on Wednesday as to why our access permit was denied.

Subject: [EXTERNAL] RE: Permit Request J02JR
Hi Karen-

This request was denied due to the inadequate information provided regarding the nature and scope of work to be performed. The permit request identified two components of work to be completed: (1) direct-push groundwater sampling and (2) application of treatment remedy. Due to the close proximity of the identified work area to the City of St. Charles Potable Drinking Water Wells 6, 7, and 9, the City will require Ameren to submit a detailed workplan describing the specific scope of work to be performed prior to considering approval of a permit.

The workplan needs to provide detail regarding the use of direct-push methods for the collection of groundwater samples including descriptions of the groundwater sample collection procedures, sample preparation, laboratory analysis (i.e., data quality controls), and data interpretation (i.e., data validation). Due to the nature of direct-push methods for groundwater monitoring, which can create sample bias (i.e., sample disturbance, sample interval, sample cross-contamination) in volatile organic compounds, the workplan should also include measures that Ameren would implement to minimize bias within the groundwater samples collected. The workplan should also include a list of the data deliverables (i.e., laboratory analytical reports, electronic data deliverables, groundwater stability criteria, field forms, etc.) that will be provided to the City of St. Charles following completion of any work.

Detailed descriptions of the treatment remedy application need to be included within the workplan. If Ameren intends to use direct-push injections to treat their contamination that has migrated to the north of the substation property, it is necessary for the City to know the type and volume of the injected material, as well as a monitoring plan to be implemented to trace the flow path of the injections and the effectiveness of the treatment. The monitoring plan should include descriptions of the groundwater parameters, monitoring frequency, and reporting requirements. The workplan should also include contingency measures to be implemented in the event that the injected material reaches the potable water supply wells. The contingency plan should include notification requirements and timeframes, as well as corrective measures to be implemented by Ameren to minimize any disruptions to the potable water services within the City of St. Charles.

Thanks,
