Subject: Monthly Update - Global South Portland Residual Tank Air Testing

Beth

We continue the work on the Tank 3 roof. The stripping of the insulation has been slowed due to the recent storms and we anticipate another 2-3 weeks to complete the work. The inspection of the roof will then be completed by an API-certified inspector.

As for incoming shipments to Tank 3, there are no anticipated deliveries in the near future based on the inventory in the tank.

One additional note I wanted to convey was a conversation I had with Anthony Stratton at Eastmount. He had called me following dismantling some of the ductwork on the tank to say that there was considerable ice buildup in the ductwork that would likely cause significant issues with measuring flow rates, etc. This was only after a couple days of operation.

I will keep you updated on the status of the tank roof evaluation and upcoming shipments.

Thanks
Tom
