Todays update 4/14/19
Crosby/Dayton should be done scraping the ditches and placed in roll off on site and the roads swept and opened back up to the public
As of 12:0 UP had not shown up to allow access to their corner to finish that one section of soil scraping.

All water has been collected and stored and an updated plan will be submitted to all agency's on 4/15 for approval.

OMI continues to collect all materials on the ground and place in roll offs, this am they had a few yards left. They also are working on metal removal and placement in roll offs for recycle. Any water collected from this cleaning is being segregated into its own frac tank in the onsite parking lot

Todays update 4/11/19, all digging on Ramsey is complete and is in boxes stored onsite. OMI continued digging Section 1 I am hoping they complete all the way to Berm 1 tonight, they will be working late. Tomorrow night they can work 24 hours to have soil up before rain on Saturday and berms up also.

OMI is onsite working on the warehouse dry goods part of the plant, they were slowed down this am due to bringing in equipment and we did have the Fire Marshal and the Chemical Review Board and OSHA all here at one time doing some sort of investigation I was not around to know what they were looking at. Again they are working late and can update progress in am when I return. I do know they loaded one metal box and have moved in more roll off and are ready to continue working tonight.
We are working towards having this area clean also by Saturday AM with rain in the forecast.

Pic attached of todays progress. Let me know if you are not wanting pictures are more or less of something.

The little bit of water in the ditch is being removed right now ahead of the digging, we did have a small shower.

I will update early AM

Hello Dodie,

I assume all of this is associated with firewater cleanup activities. I would also like information on the status of chemical cleanup on the plant.

Also, TCEQ indicated that they did not consider the rainfall as flushing but my understanding is that you were going to dig the soils anyway.

Gary Moore

> Afternoon,
>
> Dodie we discussed earlier today Gary would like to receive daily updates on the progression of the cleanup at the facility. He would really like to be informed of what's going on outside of the facility, as well as the cleanup inside. I was not allowed to go inside, as you know, so what we discuss during the morning meetings is really all I have been able to relay to him. If you could start doing this, it would be greatly appreciated as I will then, more than likely, only make a few short visits next week versus daily ones.
