Subject: HOTSITE REPORT: Update - Freedom Industries, Charleston, WV

OSC Dennis Matlock reported the plaintiff's lawyer hired a contractor, Underwater Services, Limited, who ran a camera through the culvert pipe that runs beneath the containment pad. The pipe appeared to be intact. No obstructions except two rocks were present in the approximate 75 feet of pipe. The plaintiff's lawyer will provide a copy of the video to WVDEP and EPA.

All three roll-offs containing the MCHM-contaminated liners and soil were transported off-site for disposal. Three empty roll-offs were delivered to the Site.

Water pumping operations continued inside the eastern area of the containment and in the interceptor trench. The facility is preparing an additional storage tank (402) for water storage as a large amount of water is expected from snow melt when temperatures rise on Monday.
