These are proprietary studies and are not to be released to the public; for agency use only. This is the background tox to support the MSDS information. Email one of two.

Thanks. Lora

Larry,

I found these 2 studies when I was search for your electronic copies. They were not in the file with the crude MCHM (which is a mixture) as this appears to be for PURE MCHM, which is not a current product of ours. I don't see a whole lot different here. There are some minor changes in the 28 day that the authors describe as "minor" and the acute oral is actually slightly greater than the crude product. I have not done the math as I don't have density values, but I expect the acute dermal to be essentially the same at around 2 g/kg.

I don't know if you'll want to use the "pure" data or not, but I wanted to provide this for full disclosure. Please let me know what you decide to you, and if you are able to share your final determination, I'd appreciate it.

thanks,

Ex. 6 - Personal Privacy,

Per our telephone conversation, I'm requesting your study material cited in the Crude HCHM MSDS.

Thank you
Larry Cseh
