Subject:	Glen Isle: Environmental Call- Follow-up Item
Date:	Wednesday, January 15, 2014 4:38:45 PM

I'm providing the drilling schedule requested on the last call. Due to the weather and field conditions the schedule has been a challenge this week. However, I can report that

1. The geotechnical borings will not begin until Monday, January 20, 2014.
2. The environmental borings started as scheduled Monday January 13, 2014. The first locations were on Parcel B. The drilling moved to Parcel C, specifically the Dickson warehouse on Tuesday and Wednesday. With 12 borings installed in the warehouse and two just east of the warehouse.
3. For the remainder of this week Garvies Point Road and Parcel C will be the focus of the boring activity.
4. The geotechnical drilling will begin on Monday on Parcel B (Block H). At that time both rigs will be on that parcel.
5. Parcel A (Block I) will start to be prepared for access next week.
6. The geotechnical boring rig will stay on Parcel B until all locations are completed for all development blocks on that parcel. It will then move to Parcel A. I cannot predict when that will happen until we see how the drilling on Parcel B goes.
7. The upcoming environmental borings will be conducted on Parcels B and C, and Dickson Lane and move between these locations as sites are cleared.
8. The infiltration test pits are scheduled for the end of next week, probably beginning on Thursday and may spill over to Friday.

I hope this email provides the schedule information you need. Please contact me if I can be of further help. I will update any locations as we see the field program evolve.

Ellis
