Hunters Point Naval Shipyard Remediation

In the past 10 years, Tetra Tech has performed $300 million worth of radiological surveys and remediation of 47 buildings or former building sites at Hunters Point Naval Shipyard (HPNS) in the San Francisco Bay area. We also demolished 9 HPNS buildings and structures, totaling 39,200 square feet, and 2 miles of railroad tracks, 750 cubic yards of asphalt, 350 cubic yards of concrete, and 28 miles of sanity sewer and storm drain lines. To date, Tetra Tech has received 221 Radiological Release for Unrestricted Use (Free Release) letters.

This work is being performed as pre-Record of Decision time-critical removal actions. Through this program and others like it, Tetra Tech is applying cost-effective approaches to help the U.S. Navy with the regulatory free release and closure of radiologically impacted buildings and sites under the U.S. Department of Defense's Base Realignment and Closure (BRAC) mandate.

Tetra Tech has conducted radiological surveys of buildings, characterized contamination, performed remediation, and decontaminated and demolished facilities. The demolished facilities included former scrap yards, furnaces and boiler room facilities, storage facilities, and other support structures and their related asphalt and concrete pads, sanitary sewer and storm drain lines, and other supporting infrastructure.

Highlights

- Safety is a critical component of Tetra Tech's success at HPNS. As of March 2014, we achieved 1,948 consecutive days and 1,300,000 hours without a lost time incident.
- The National Demolition Association awarded Hunters Point the 2014 Environmental Excellence Award. This award recognizes outstanding achievements in environmental improvements, community partnerships, health and safety concerns of workers, and economic and other benefits for the local community.

Services We Delivered

- Radiological surveys
- Remediation
- Demolition
- Environmental controls
- Waste material management
- Community relations
- Data management and documentation
