Subject:	Glen Isle: Geotechnical boring program
Date:	Monday, November 25, 2013 1:50:26 PM

The complete work plan for the geotechnical borings has been uploaded to the FTP site in the "Geotech-Data Gap etc work plan" folder. I think the earlier connection problems the DEC had have been worked out and you can access the documents there. Please tell me if you are still having a problem and I will send a CD to you.

The FTP login info is:

ftp://167.206.205.43

The username: glenisleenviro
and the password is: glenisleftp2

The geotechnical and DOT boring map sent in the email last week shows the locations where the field work will be performed. I also added that map to the FTP folder. The work plan has the earlier maps showing all of the data gap borings that were sent to you last September.

Although the data gap sampling locations may change after our December meeting, the geotechnical and DOT boring locations will not and the procedures described in the work plan should apply to all investigative work that will be done on the site prior to construction.

Please contact me if you have any questions.

Thank you,
Ellis
