Subject: Request for GIS information on soil vapor samples and ARICs at HPS
Date: Monday, November 1, 2010 2:13:35 PM

Doug and Scott,

Could you please forward us the most updated GIS coverages that show the locations of soil vapor samples collected and the colored ARIC grids?

These would be for the figures that Melanie presented at the Oct 19-20 early transfer meetings (it was a set of 6-8 11x17 maps as I remember), or perhaps updates to these figures that may have been presented at the Oct 28 BCT meeting. Work directly with Andrew Bley (ph 510.302.6246) if you have any technical questions—but I'm hoping not since we've done this GIS transfer process with you all before.

We will be incorporating the soil vapor sample locations into figures we're preparing for the Navy that we're trying to complete tomorrow (Nov 2) so appreciate your earliest attention to this. We'd like the whole data set, but we are primarily focused on Parcels B and G, so if data from some other parcel will slow you down we could make do with only the data for B and G.

Similarly, we will be incorporating the ARIC information in the finding for suitability for early transfer document so want to get the most updated presentation of the ARICs at Parcels B and G that you have available. Again, if the ARIC information will slow you down, it can follow slightly later.

Can you also provide a simple total number (estimate is fine) of the number of soil gas samples collected in your field effort? That total only to be used in the context of "wow, look how many samples we collected" so round up.

Again, feel free to contact Andrew with any technical issues and call me with any other questions.

Thanks in advance for your quick help.

Tim
