On May 13, 2015, the owner of a 100 acre field of young tomato plants reported herbicide damage to approximately 30 acres of the plants. The damage included yellowing, folding leaves, new growth was turning black and blooms had aborted. Laboratory analysis of a gradient sample revealed a pattern of glyphosate drift from the adjacent cotton site to the tomato field. The tomato grower estimated $140,000.00 in damages. An enforcement action is pending.
