On July 1, 2016, Fresno County Agricultural Commissioner's (CAC) office received notification from the Fresno County Department of Environmental Health regarding a person's transport to Community Regional Medical Center Fresno (CRMC) the prior evening. The patient exhibited symptoms of diaphoresis, tremors and vomiting. He was administered atropine, a protopam drip and transferred to the trauma intensive care unit due to the belief he was exposed to an organophosphate. He was discharged on July 3.

The claimant reported that he was exposed to an organophosphate while at work on June 30. Review of his timecard and statements from his employer found that he had not worked that day, and organophosphates are not handled on that property.

No violations could be confirmed.
