Another leak on the 16" was identified in close proximity to the break earlier this month. J Fletcher Creamer is currently assembled on location.

All, I understand there is another (or perhaps the same) leak this morning at the LCP site.

Please let me know what's going on.

Thanks, Jon

Mike,
Be advised this was a 16" main break which was dispatched to Creamer. A section approx. 5LF was replaced and main is back in service.
