Subject:	15-Day Report: 22-KER-17 (alleged damage to rose plants from an herbicide application made to an almond site)
Date:	Friday, July 07, 2017 5:01:02 PM
Attachments:	22-KER-17 15-Day Report.pdf

On April 6 and 27, 2017, the Kern County Department of Agriculture and Measurement Standards received reports of loss alleging damage to roses (field and container grown) caused by drift from a ground application of glyphosate made to a nearby almond orchard. Symptoms on the roses include leaf curling, leaf distortion and discoloration.

Update:

A Pesticide Episode Closing Report for this priority investigation was distributed on 06/15/2017. Consultation with a University of California Cooperative Extension horticultural specialist was that possible sources of damage to the roses could be disease, mildew, herbicide, cultural practices, or physiological issues.

No violations noted during the investigation.
