On April 26, 2017, a grower observed that his young almond trees were exhibiting spots and burns on the leaves. He suspected the damage was the result of drift from an aerial application of Goal 2XL and Gramoxone SL 2.0 to a pre-plant site west of his almond orchard. He submitted a Report of Loss, Non-performance or Damage Report (ROL) to the Fresno County Agricultural Commissioner's Office (CAC). He estimated a cost of $10,208.00 to replace the trees. It appears he will also lose one year of production. Samples were collected. The oxyfluorfen analysis is still pending. Fresno CAC is continuing to investigate the incident.
