---

*UPDATE: The pesticide application was approximately 200 feet away from the transplant crew at the closest point; the wind speed at the time of the application was a rate of about 4.5mph. The crew supervisor arrived at approximately 6:30am and took three symptomatic workers to Natividad Medical Center (NMC) in Salinas. All 16 crew members arrived at NMC between 7:00am and 7:30am and were immediately triaged and decontaminated by hospital staff. Seven out of the 16 crew members stated that they had pesticide-related symptoms; Monterey CAC requested clothing samples from the 16 crew members, but only seven were willing to provide them with clothing samples. All pertinent interviews have been conducted and clothing samples will be sent to the CDFA Analytical Chemistry Lab next week. This investigation is currently ongoing.
