Hi Chip:

I've gone through that 1993 TetraTech Report and copied all the pages about geology and injection wells at Lahaina. It actually has a lot of useful information, including an estimated travel time of 10-20 days based on an old 2-D model. I'll be interested to hear your comments. These sections total about 35 pages. Do you want me to fax or mail this to you? You can, of course, also borrow the entire report. By the way, this is not the tracer study report but an earlier one that compares anthropogenic nutrient sources in the watershed.

Wendy
