Frank,

Since our conference call on 5/11 and the subsequent draft action plan submittal, EPA wanted to reiterate our request regarding SPLP sampling. Please run SPLP analysis on all soil samples above 100 mg/kg. Additionally, EPA and DEC has gotten input from our chemists with respect to analyzing soil samples below 100 mg/kg for SPLP. All are in agreement that method detection limits should not affect the SPLP results, therefore, we are also requesting that all of the soil samples between 24 mg/kg and 100 mg/kg also be analyzed for SPLP.

If you have any questions please contact me or Lorenzo.
