Subject: DRAFT Agenda for LVMWD mtg tomorrow
Date: Wednesday, March 06, 2013 5:21:00 PM

Here's a draft of the agenda for tomorrow's meeting. If you have any additions, let me know.

AGENDA

Malibu Creek & Lagoon DRAFT TMDL Meeting
March 7, 2013

A. Concerns with the Proposed DRAFT TMDL
B. Review of the WLAs proposed in the Draft TMDL

C. Options for the LVMWD WLA in the Final TMDL

B. Review of the WLAs and Instream Concentrations Limits

1. Multiple sources

2. Assimilative Capacity

3. Seasonality

   Summer Period (April 15 – November 15) - discharge prohibited
   Winter Period – discharge allowed

(This section is provided for us as a basis – not planning on giving to LVMWD)

C. Options for Clarifying the LWMWD WLAs

<u>Summer season</u> - no discharge prohibition period; leave the current end-of-pipe limit as is due to non-continuous discharge.

<u>Winter season</u> – Based on past loadings analysis and also current evaluation of Tapia's proportion of the flow, determine and evaluate assimilative capacity.

a. Incorporate assimilative capacity factor. Compute an end of pipe limit set as

WLA for the TMDL;

b. Incorporate flexibility language that describes how the end of pipe limits must meet instream concentration with assimilative capacity;
c. Incorporate language allowing for application of a 10 year compliance schedule period;
d. Consideration of applicable averaging periods (e.g., monthly/seasonal/annual averaging period).
