San Joaquin County Agricultural Commissioner's (CAC) staff interviewed the 49 year-old-female that experienced symptoms. She explained in the interview that she recently used Hartz 2 in 1 Flea & Tick Powder during the past couple months. She has fostered cats and worked at a vet office for over 30 years, so feels she has allergic responses to the product now. She read and followed the label. The label does not require PPE. She washed her skin after every treatment.
